Market Recap

The month of June wasn't pretty for investors, as stocks, bonds, gold and crypto all dropped. Consumer confidence, which had held up reasonably well, plunged under the weight of too much bad news. One of the primary drivers of pessimism was the May consumer price index, which instead of retreating as expected, climbed from +8.2% to a new 41-year high of +8.6% year-over-year. The main contributors to the unexpectedly hot report were food, energy, autos, shelter costs, and travel and leisure services, all major drains on the average consumer. Unfortunately, this troubling data was released during the Fed's 10-day blackout period just before the June FOMC meeting, which meant Fed officials were prohibited from speaking and unable to rein-in growing concerns. As a result, inflation expectations soared *along with bond yields*.

At the June FOMC meeting, committee members succumbed to market pressure with the first 75 basis point rate hike in 28 years. At the press conference that followed, Chair Powell reiterated inflation was much too high, the Fed was committed to achieving price stability and would need to see compelling evidence that inflation was coming down before altering its course. The "course" at the time of the meeting was another 200 basis points of rate increases before year end.

The positive response to Powell's pledge to tame inflation quickly evolved into concern that the Fed would overtighten and tip the economy into recession. Powell stoked this fear repeatedly during the month, asserting that inflation was the Fed's top priority and implying that the economy could be sacrificed to achieve this objective. This tough talk was necessary to preserve remaining Fed credibility but damaging to consumer confidence.

The FOMC decided months ago that its employment mandate has been met, pointing to a +3.6% unemployment rate and overabundance of available jobs. The economic slowdown Powell is orchestrating will reduce the number of job openings over time, but fast dwindling savings and bear market destruction of retirement accounts could have a more immediate impact. The negative wealth effect of stock losses, and sagging confidence contributed to the first contraction in monthly retail sales this year. The -0.3% drop in May

spending would have been considerably worse if not for large gains in grocery store and gas station receipts, which were elevated by higher prices.

Rising prices are draining savings accounts, and record borrowing has thus far made up the shortfall. The personal saving rate slipped to a 13-year-low of 5.4%, roughly half of where it was just nine months earlier. At the same time, Federal Reserve data showed revolving credit had risen +19.6% year-over-year in April to a new record high of just over \$1.1 trillion.

The two-year Treasury-note yield started the month at 2.55% and climbed to 3.43% after the CPI release before closing the month at 2.95% as recession concerns entered the equation. The 12-month Treasury bill started June at 2.05%, peaked at 2.97% and closed the month at 2.74%. This degree of market movement in such a short period of time, especially on the short end of the curve, is almost unprecedented. The easy explanation is that buyers outnumbered sellers, but the longer explanation is that inflation climbed beyond where most experts expected. The things most Americans buy every day were front and center, with the average price for a gallon of gas topping \$5 per gallon for the first time in history.

At this point, the bond market has queued-up another 75-bp hike for July and 50-bps for September, but as signs of weakness emerge talk has already begun of when monetary policy could shift from tightening to easing. This won't happen in 2022 as inflation is expected to remain very elevated, and a policy shift anytime during the next 12 months would be a surprise. However, surprises have come with increasing frequency in recent years and the unexpected has become commonplace.

Investment Officers' Certification

This report is prepared for the Northwest ISD (the "Entity") in accordance with Chapter 2256 of the Texas Public Funds Investment Act ("PFIA"). Section 2256.023(a) of the PFIA states that: "Not less than quarterly, the investment officer shall prepare and submit to the governing body of the entity a written report of the investment transactions for all funds covered by this chapter for the preceding reporting period." This report is signed by the Entity's investment officers and includes the disclosures required in the the PFIA.

The investment portfolio complied with the PFIA and the Entity's approved Investment Policy and Strategy throughout the period. All investment transactions made in the portfolio during this period were made on behalf of the Entity and were made in full compliance with the PFIA and the approved Investment Policy.

It is not possible to directly invest in an index. Financial forecasts, rates of return, risk, inflation, and other assumptions may be used as the basis for illustrations. They should not be considered a guarantee of future performance or a guarantee of achieving overall financial objectives. Past performance is not a guarantee or a predictor of future results of either the indices or any particular investment. S&P rates the creditworthiness of individual bonds from: AAA highest to D lowest.

Investing in fixed income securities involves interest rate risk, credit risk, and inflation risk. Interest rate risk is the possibility that bond prices will decrease because of an interest rate increase. When interest rates rise, bond prices and the values of fixed income securities fall. When interest rates fall, bond prices and the values of fixed income securities rise. Credit risk is the risk that a company will not be able to pay its debts, including the interest on its bonds. Inflation risk is the possibility that the interest paid on an investment in bonds will be lower than the inflation rate, decreasing purchasing power.

Cash alternatives typically include money market securities and U.S. treasury bills. Investing in such cash alternatives involves inflation risk. In addition, investments in money market securities may involve credit risk and a risk of principal loss. Because money market securities are neither insured nor guaranteed by the Federal Deposit Insurance Corporation or any other government agency, there is no guarantee the value of your investment will be maintained at \$1.00 per share, and your shares, when sold, may be worth more or less than what you originally paid for them. U.S. Treasury bills are subject to market risk if sold prior to maturity. Market risk is the possibility that the value, when sold, might be less than the purchase price.

Investing in stock securities involves volatility risk, market risk, business risk, and industry risk. The prices of most stocks fluctuate. Volatility risk is the chance that the value of a stock will fall. Market risk is the chance that the prices of all stocks will fall due to conditions in the economic environment. Business risk is the chance that a specific company's stock will fall because of issues affecting it. Industry risk is the chance that a set of factors particular to an industry group will adversely affect stock prices within the industry.

Securities offered by HTS: (1) are not FDIC (Federal Deposit Insurance Corporation) insured; (2) are not bank deposits; (3) are not guaranteed by any bank or by any other federal government agency. None of the named entities are affiliates of HTS or HSAM. Hilltop Securities Asset Management (HSAM) is an SEC-registered investment advisor. Hilltop Securities Inc. (HTS) is a registered broker-dealer, registered investment adviser and municipal advisor firm that does not provide tax or legal advice. Member of FINRA & SIPC. HTS and HSAM are wholly owned subsidiaries of Hilltop Holdings, Inc. (NYSE: HTH) located at 717 N. Harwood St., Suite 3400, Dallas, Texas 75201, (214) 859-1800, 833-4HILLTOP.
