

GRW Engineering Vice President Cory Sharrard shared a design presentation with the board

Wayne County Schools took another step further in improving the indoor air quality of the Wayne County High School gymnasium and adjoining facility, which has served students and the community for many years.

With the help of Covid relief ESSER funding, the Wayne County Board of Education is making needed updates to the facility which is the indoor home to Cardinal athletics and special events. During Thursday evening's monthly school board meeting, Cory Sharrard, vice president of GRW Engineering, shared initial design development drawings in relations to the project which replaces all of the mechanical units.

Following her presentation, the board approved a pay invoice to GRW for their professional services in the amount of \$64,276.

Next month, more detailed drawings will be presented in this process by GRW. Codell, the construction management company, will oversee bids on different facets of the project in the fall. The project will include: new HVAC, exterior windows, exterior doors, and roof. In addition, the areas affected by the new HVAC system will get new ceilings and lighting. The new HVAC reaches the main floor locker rooms, as well as the adjoining cafeteria and kitchen where improvements will also be made.

In other business:

*Approved an agreement with the office of Vocational Rehabilitation, Education and Labor Cabinet for a community work transition program.

*Approved an agreement for an energy manager for the 2022-23 school year that is shared amongst area school districts.

*Approved al a carte meal prices for the upcoming school year.
