

Authenticating to Kentucky Statewide Longitudinal Data System

We are working to make access to the KSLDS as effortless, yet secure, as possible. While the goal is for the KSLDS to be part of a “single sign-on” environment like your email, at this time all users will need to login using their existing KETS usernames and passwords. Due to slight differences that sometimes occur when KETS accounts are created, a small number of users may be asked to login a second time.

Step One:

The KSLDS is a secure website. Please note the “https” in the URL. Open a browser and go to <https://www.kslds.education.ky.gov>

Step Two:

Log in to the KSLDS website using your KETS username and password. Please note the direction of the backslash between your network domain and your username. It is very important to use the correct backslash as most keyboards have two from which to choose. The correct backslash is found under the “Backspace” key on most keyboards.

1. User name = your domain\username
2. Password = your KETS password

Figure 1 – Login to KSLDS website

Step Three:

If prompted, login a second time. You will need to remove the domain (“KETS\” in this example) from in front of your username (see Figure 2). Your password will be the same password used in Step Two. Enter your password and click on the “OK” button. (see Figures 1 and 3)

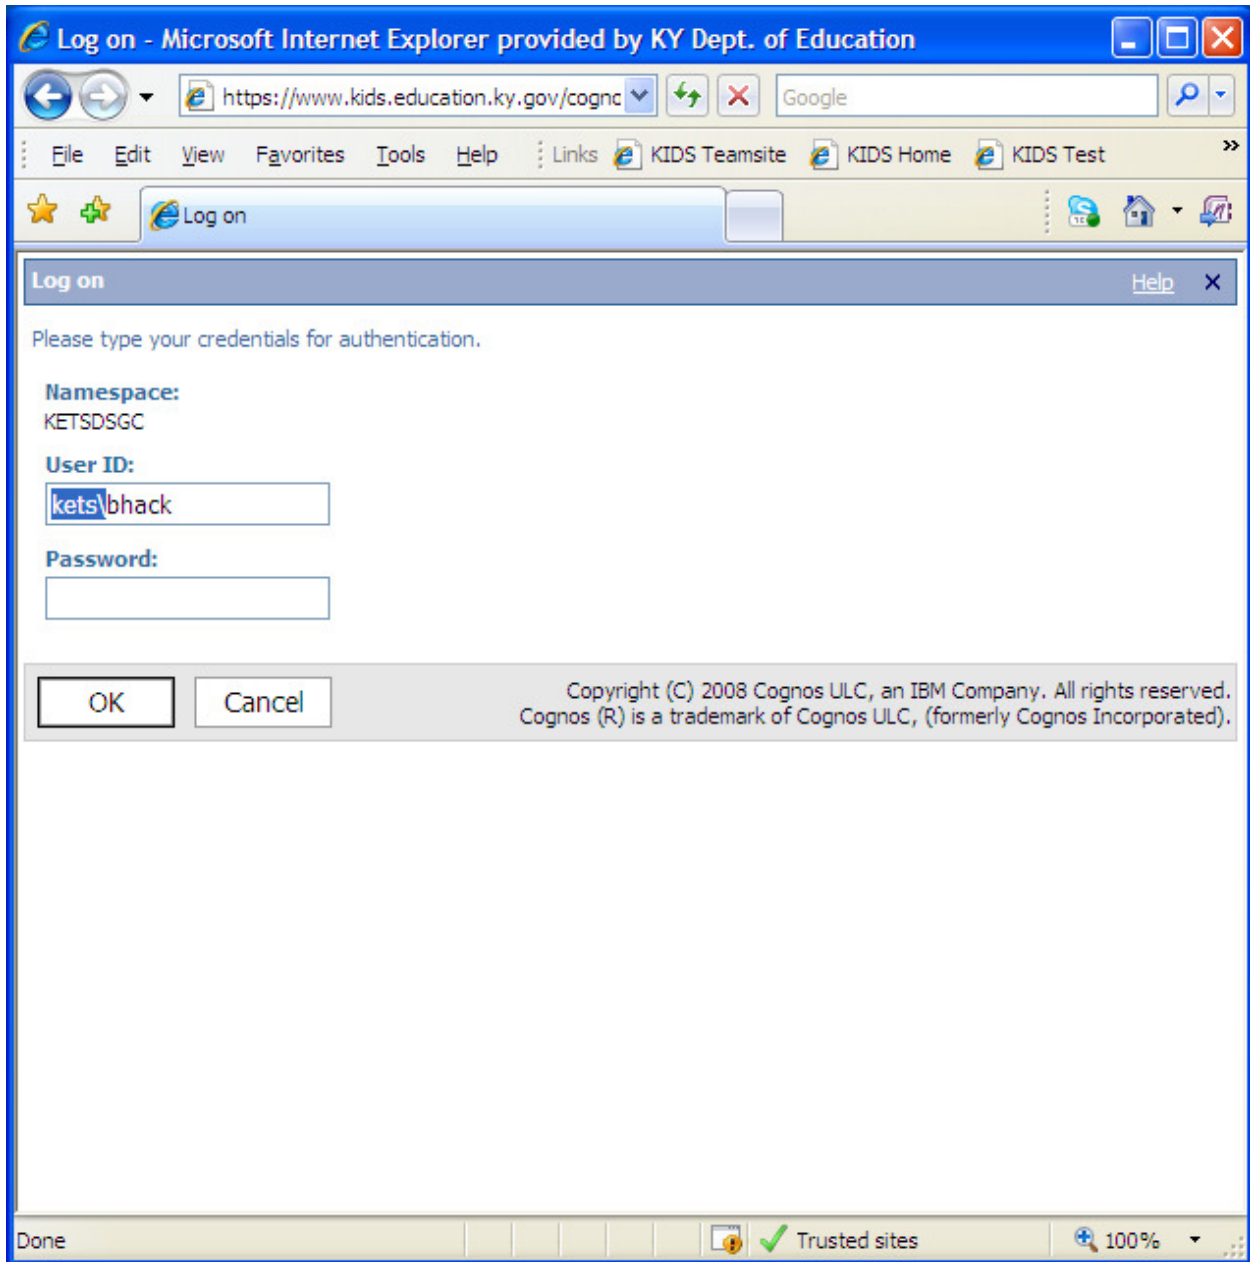

Figure 2 – Remove the domain (“KETS\” in this example) from username

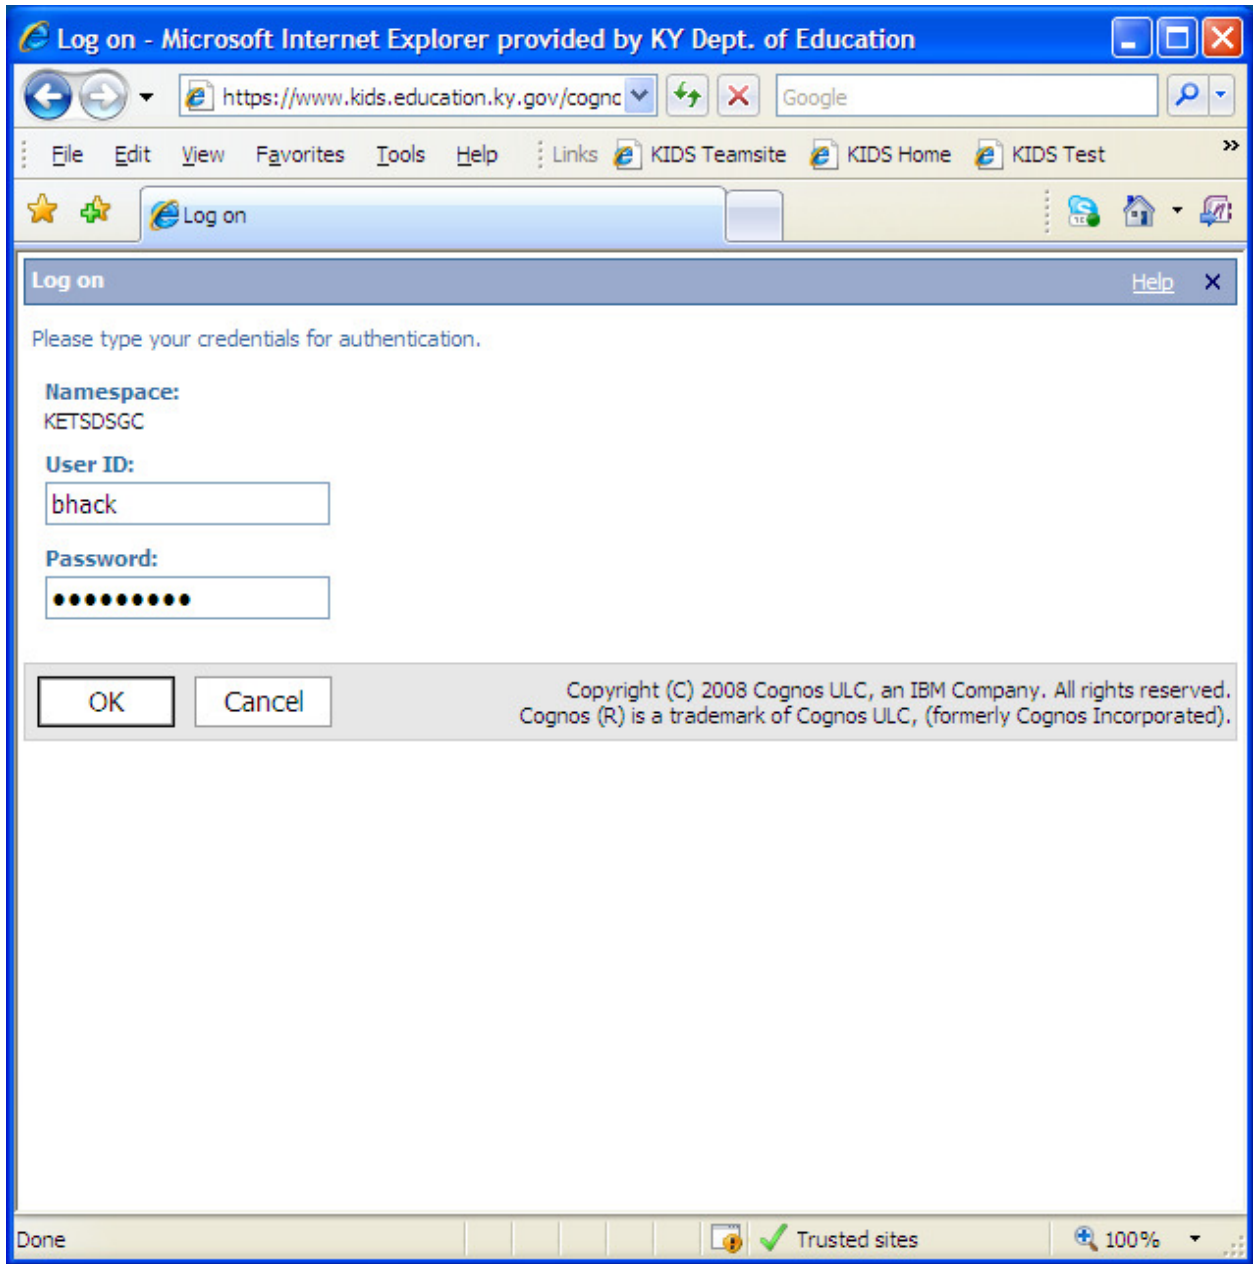

Figure 3 - Enter password and click "OK"
