

Dear K-5 Families,

We are excited to provide you with a **Digital Resource** as part of our grades K-5 math program. Please refer to this **resource when helping your child with math homework or reviewing concepts and ideas**. The digital resource will provide you with access to math content in grades K-5 and illustrates important math ideas and strategies.

The digital resource contains three links, **Math Words and Ideas, Games Center and Math Tools**. You can use these links to review topics, explore different strategies, learn how to play grade-appropriate games, and most importantly it can be *very helpful when completing homework assignments!*

### **Math Words and Ideas**

Please continue reading for an example of how the **Math Words and Ideas** can help you.

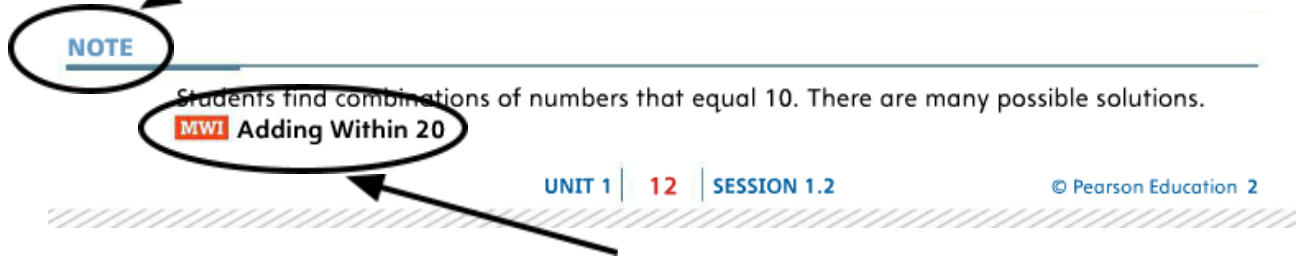

We appreciate your support at home and hope this resource helps in supporting your child's learning.

Here is an example of how the **Math Words and Ideas** can help you.

You will see “**Daily Practice**” and “**Homework**” pages come home. They often have a **NOTE** section on the bottom of the page.

The **NOTE** on this page lets you know that **MWI: Adding Within 20** can be referenced to help with this assignment.

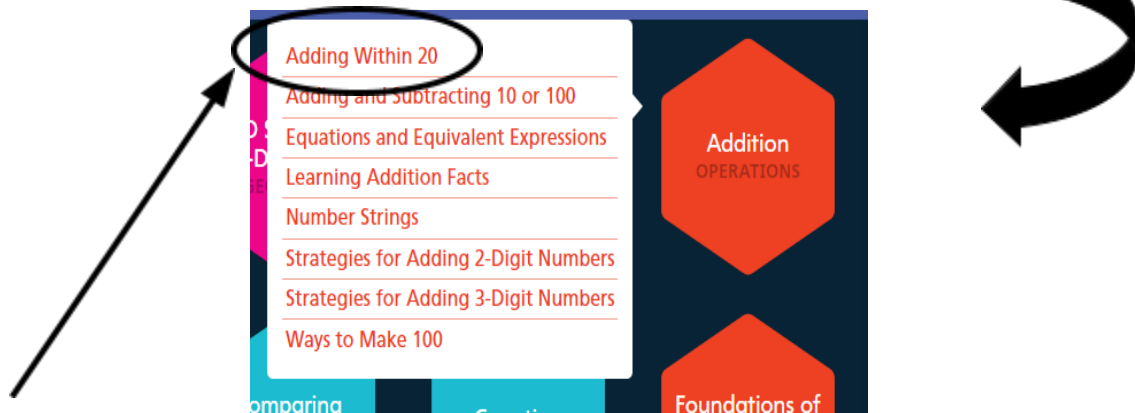

To access this page, use the **Math Words and Ideas (MWI)** link listed on the front of this page.

This is what the page will look like when you follow the link.

The red MWI on the Note section at the bottom of the page ( **MWI Adding Within 20** ) indicates Adding Within 20 can be found under a red hexagon (Addition).

Hover over this hexagon to see the list of topics it covers.

Click on Adding Within 20. This is where the instruction will be to help with this assignment.
