6-12 Student Google Apps Fact Sheet for Teachers

Here's what you need to know about your students' accounts for Google Apps for Education.

- Every student in the District has been given an account in Google Apps for Education except for those whose parents have opted them out

- Parents have the right to opt their student out of Google Apps for Education in two ways:
    - They can opt out completely, meaning their student will have no access to Google Apps for Education
    - They can opt out of email only while still allowing access to other Google Apps for Education resources such as Google Docs and individual log ins for Chromebooks

- Student accounts look like this: zb5555@pleasantonusd.net where the letters are the student's initials, and the digits are a randomly assigned four digit number. We are using this instead of the student's ID number to help protect the student's identity.

- Students can and should log into Chromebooks on your campus using their own Google Apps for Education account

- Student passwords need to be activated by the student. A separate handout that describes that process is viewable here: http://go.pleasantonusd.net/vejqq

    A short (three minute) video that demonstrates the process is here:
    http://go.pleasantonusd.net/bgdij

- You can see the student's email address in the Student Profile in the Demographics section.

- 6-12 Students can send and receive emails anywhere in the world.

- TODO: There is a report under Enrollment that will give you a roster of all of your students' accounts.
