

# **Pre-Algebra – 8 Mathematics Curriculum**

**Francis Howell  
School District**

**Board Approved: July 17, 2014**

## **Curriculum Committee**

Sue Dodson	Hollenbeck Middle School
Jennifer Fredrick	Bryan Middle School
Amy Ridling	Barnwell Middle School

## **Middle School Department Chairs**

Sue Dodson	Hollenbeck Middle School
Jennifer Fredrick	Bryan Middle School
Kristin Luparell	Saeger Middle School
Cindy McGrail	Barnwell Middle School
Lisa Stearns	Francis Howell Middle School

Secondary Content Leader	Karen Hill
Director of Student Learning	Dr. Chris Greiner
Chief Academic Officer	Dr. Mary Hendricks-Harris
Superintendent	Dr. Pam Sloan

## **Francis Howell School District**

### **Mission Statement**

Francis Howell School District is a learning community where all students reach their full potential.

### **Vision Statement**

Francis Howell School District is an educational leader that builds excellence through a collaborative culture that values students, parents, employees, and the community as partners in learning.

### **Values**

Francis Howell School District is committed to:

- Providing a consistent and comprehensive education that fosters high levels of academic achievement for all
- Operating safe and well-maintained schools

- Promoting parent, community, student, and business involvement in support of the school district
- Ensuring fiscal responsibility
- Developing character and leadership

### **Francis Howell School District Graduate Goals**

Upon completion of their academic study in the Francis Howell School District, students will be able to:

1. Gather, analyze and apply information and ideas.
2. Communicate effectively within and beyond the classroom.
3. Recognize and solve problems.
4. Make decisions and act as responsible members of society.

### **Mathematics Graduate Goals**

Upon completion of their mathematics study in the Francis Howell School District, students will be able to:

- Make sense of problems and persevere in solving them.
- Reason abstractly and quantitatively.
- Construct viable arguments and critique the reasoning of others.
- Model with mathematics.
- Use appropriate tools strategically.
- Attend to precision.
- Look for and make use of structure.
- Look for and express regularity in repeated reasoning.

### **Course Rationale**

In order to be effective citizens in the 21st century, students need to understand mathematics. Students often encounter problem situations that require reasoning, computation, and communication. We regularly study the most efficient methods for reaching solutions, but also realize that examining different solution methods help develop more flexible solving skills. The instruction and assessment is focused on instilling students with enduring understandings of mathematics. Pre-Algebra – 8 seeks to help students develop a strong foundation for future algebra courses and conceptual understanding in real-life problem solving.

### **Course Description for Pre-Algebra - 8**

This course is designed to provide students with a strong foundation for future algebra courses and conceptual understanding in real-life problem solving. The focus is on three critical areas: 1) formulating and reasoning about expressions and equations, including modeling an association in bivariate data with a linear equation, and solving linear equations and systems of linear equations; 2) grasping the concept of a function and using functions to describe quantitative relationships; 3) analyzing two- and three-dimensional space and figures using distance, angle, similarity, and congruence, and understanding and applying the Pythagorean Theorem.

### Francis Howell School District Pre-Algebra – 8 Curriculum Map

Unit	Standard	Description	Textbook Reference
<b>SEMESTER 1</b>			
Real Numbers & Exponents	8.NS.A.1	Know that numbers that are not rational are called irrational. Understand informally that every number has a decimal expansion; for rational numbers show that the decimal expansion repeats eventually, and convert decimal expansion which repeats eventually into a rational number.	3.10/6.3
	8.NS.A.2	Use Rational approximations of irrational numbers to compare the size of irrational numbers, locate them approximately on a number line diagram, and estimate the value of expressions.	3.10
	8.EE.A.1	Know and apply the properties of integer exponents to generate equivalent numerical expressions.	2.6/2.7/2.8
	8.EE.A.2	Use square roots and cube root symbols to represent solutions to equations of the form $x^2 = p$ and $x^3 = p$ when $p$ is a positive rational number. Evaluate square roots of small perfect squares and cube roots of small perfect squares. Know that the $\sqrt{2}$ is irrational.	3.8/3.9/3.10 Cubes Pg. 154-55
	8.EE.A.3	Use numbers expressed in the form of a single digit times an integer power of 10 to estimate very large or very small quantities, and to express how many times as much one is that the other.	2.9 7.2 Algebra
	8.EE.A.4	Perform operations with numbers expressed in scientific notation, including problems where both decimal and scientific notation are used. Used scientific notation and choose units of appropriate size for measurements of very large or very small quantities.	2.9 7.2 Algebra
	Are you ready?	Evaluating Expressions/Order of Operations Distributive Property	1.6 and supplement

Equations	Are you ready?	One and two step equations Equations with integers and rational numbers	
	8.EE.C.7a	Solve linear equations in one variable. Give examples of linear equations in one variable with one solution, infinitely many solutions, or no solutions. Show which possibilities is the case by successively transforming the given equation into simpler forms until an equivalent equation of the form $x = a$ , $a = a$ , or $a = b$ results	10.1 10.2 10.3
	8.EE.C.7b	Solve linear equations in one variable. Solve linear equations with rational number coefficients, including equations whose solutions require expanding expressions using the distributive property and collecting like terms.	10.1 10.2 10.3
Functions	Are you ready?	Proportions Similarity Units/Ratios	7.1/7.2 7.4/7.6
	8.EE.B.5	Graph proportional relationships, interpreting the unit rate as the slope of a graph. Compare two different proportional relationships represented in different ways.	11.1/11.2
	8.F.A.1	Understand that a function is a rule that assigns to each input exactly one output. The graph of a function is the set of ordered pairs consisting of an input and the corresponding output.	12.4
	8.EE.B.6	Use similar triangles to explain why the some $m$ is the same between any two distinct points on a non-vertical line in the coordinate plane, derive the equation $y=mx+b$ for a line through the origin and the equation $y=mx+b$ for a line intercepting the vertical axis as $b$ .	11.3
	8.F.A.2	Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions)	11.1/11.2/11.3
	8.F.A.3	Interpret the equation $y=mx+b$ as defining a linear function, whose graph is a straight line; give examples of functions that are not linear.	11.1/11.2/11.3
	8.F.B.4	Construct a function to model a linear relationship between two quantities. Determine the rate of change and initial value of the function from a description of a relationship or from two $(x, y)$ values, including reading these from a table, or from a graph. Interpret the rate of change and initial value of a linear function in terms of the situation it models, and in terms of its graph or a table of values.	12.4/12.5 Refer to 12.6/12.7
	8.F.B.5	Describe qualitatively the functional relationship between two quantities by analyzing a graph. Sketch a graph that exhibits the qualitative features of a function that has been described verbally.	12.4/12.5 Refer to 12.6/12.7

Systems of Equations	8.EE.C.8a	Analyze and solve pairs of simultaneous linear equations - Understand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously.	10.6 6.1-6.4 from Algebra
	8.EE.C.8b	Analyze and solve pairs of simultaneous linear equations - Solve systems of two linear equations in two variables algebraically, and estimate solutions by graphing the equations.	10.6 6.1-6.4 from Algebra
<b>SEMESTER 2</b>			
Systems of Equations	8.EE.C.8c	Analyze and solve pairs of simultaneous linear equations - Solve real-world and mathematical problems leading to two linear equations in two variables.	10.6 6.1-6.4 from Algebra
Pythagorean Theorem	8.G.B.6	Explain the proof of the Pythagorean Theorem and its converse.	6.3
	8.G.B.7	Apply the Pythagorean Theorem to determine unknown side lengths in right triangles in real-world and mathematical problems in two and three dimensional.	6.3
	8.G.B.8	Apply Pythagorean Theorem to find the distance between two points in a coordinate system.	6.3
Geometry	8.G.A.5	Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles.	5.2/5.3
	8.G.A.1a	Verify experimentally the properties of rotations, reflections, and translations. Lines are taken to lines, and line segments to line segments of the same length	5.7
	8.G.A.1b	Verify experimentally the properties of rotations, reflections, and translations. -Angles are taken to angles of the same measure.	5.7
	8.G.A.1c	Verify experimentally the properties of rotations, reflections, and translations. -Parallel lines are taken to parallel lines.	5.7
	8.G.A.2	Understanding that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections, and translations; given two congruent.	5.7
	8.G.A.3	Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates.	5.7/7.5
	8.G.A.4	Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and	5.7/7.5

		dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.	
	8.G.C.9	Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.	
Statistics and Probability	8.SP.A1	Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities.	4.7 SP
	8.SP.A.2	Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.	4.7 SP 11.7 Line of Best Fit
	8.SP.A.3	Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept.	11.3/4.7/11.7
	Supplement as needed	Measures of Center	4.3
	8.SP.A.4	Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables.	Skills bank Page 785 Supplement
	8.F.B.5	Describe qualitatively the functional relationship between two quantities by analyzing a graph. Sketch a graph that exhibits the qualitative features of a function that has been described verbally.	12.4/12.5 Refer to 12.6/12.7
	8.G.A.4	Understand that a two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of rotations, reflections, translations, and dilations; given two similar two-dimensional figures, describe a sequence that exhibits the similarity between them.	5.7/7.5

<b>Content Area: Math</b>	<b>Course: Pre-Algebra - 8</b>	<b>UNIT 1: Real Numbers &amp; Exponents</b>
<p><b>Unit Description:</b> Beginning with familiar number sense topics helps students transition into the Grade 8 content. Turning decimal expansions into fractions and deepening understanding of the meaning of decimal expansions sets a firm foundation for understanding irrational numbers. Students will learn that the square roots of perfect squares are rational numbers, and that the square roots of non-perfect squares, such as <math>\sqrt{2}</math> or <math>\sqrt{7}</math>, are examples of irrational numbers. Students will understand the value of square roots and cube roots and use this understanding to solve equations involving perfect squares and cubes. Further work with exponents, including scientific notation, naturally flow from the understanding of squares and cubes.</p>		<p><b>Unit Timeline:</b> 5 weeks</p>

<b>DESIRED RESULTS</b>
<p><b><u>Transfer Goal</u> - <i>Students will be able to independently use their learning to...</i></b></p> <ul style="list-style-type: none"> <li>● Make sense of problems and persevere in solving them</li> <li>● Reason abstractly and quantitatively</li> <li>● Construct viable arguments and critique the reasoning of others</li> <li>● Model with mathematics</li> <li>● Use appropriate tools strategically</li> <li>● Attend to precision</li> </ul>

- Look for and make use of structure
- Look for and express regularity in repeated reasoning

**Understandings – *Students will understand that... (Big Ideas)***

1. Decimals that “terminate” actually repeat the digit zero. ( $2.5 = 2.500000\dots$ ) (8.NS.1)
2. Numbers that repeat in their decimal form are called rational. (8.NS.1)
3. Numbers that do not repeat in their decimal form are called irrational. (8.NS.1)
4. The number  $\sqrt{2}$  is irrational. (8.EE.2)
5. The square root of the area of a square represents the side length of the square. (8.EE.2)
6. Exponent operation properties. (8.EE.1)

**Essential Questions: *Students will keep considering...***

- Why do you convert a rational number into a decimal?
- How do you use a number line to compare the size of two irrational numbers?
- How do you evaluate a numerical expression with integer exponents?
- What are the numbers that are perfect squares and non-perfect squares?
- How do you use scientific notation?
- What are the laws of exponents?

Students Will Know...	Standard	Students Will Be Able to ...	Standard

## UNIT RESOURCES

### **Teacher Resources:**

- <http://heasarc.nasa.gov/docs/cosmic/planets.html> (Website with planet information)
- <http://www.nctm.org/resources>
- Illustrative Mathematics: <http://www.illustrativemathematics.org/>
- Learnzillion: <http://learnzillion.com/>

### **Student Resources:**

- <http://heasarc.nasa.gov/docs/cosmic/planets.html> (Website with planet information)
- Thinking Blocks: <http://www.mathplayground.com/thinkingblocks.html>
- Learnzillion: <http://learnzillion.com/>

### **Vocabulary:**

- Exponent - An exponent is a number or a variable in an expression that represents how many times another number is used in repeated multiplication.
- Scientific notation – A form of writing numbers as the product of a power of 10 and a decimal number greater than or equal to one. Scientific notation makes it easier to work with very large and very small numbers.
- Irrational number – A number that cannot be written as a quotient of two integers.
- Rational number – Any number that can be written as a quotient of two integers or in the form of  $\frac{a}{b}$
- Square root - The square root of x is the number that, when multiplied by itself, gives the number, x.
- Radical Sign – The radical sign is a symbol used in expressions when a root is to be taken.  $\sqrt{36}$  means the square root of 36.
- Perfect square – A perfect square is the product of an integer and itself. Perfect squares are non-negative and can be written as  $x^2$  when x is an integer.
- Cube root - A number that when cubed (taken to the power of 3) gives the original number.

<b>Content Area: Math</b>	<b>Course: Pre-Algebra - 8</b>	<b>UNIT 2 : Equations</b>
<b>Unit Description:</b> Students solve linear equations in one-variable using the distributive property and combining like terms.		<b>Unit Timeline:</b> 4 weeks

**DESIRED RESULTS**

**Transfer Goal** - *Students will be able to independently use their learning to...*

- Make sense of problems and persevere in solving them
- Reason abstractly and quantitatively
- Construct viable arguments and critique the reasoning of others
- Model with mathematics
- Use appropriate tools strategically
- Attend to precision
- Look for and make use of structure
- Look for and express regularity in repeated reasoning

**Understandings** – *Students will understand that... (Big Ideas)*

1. Students will solve linear equations using the distributive property and by combining like terms, including equations with variables on both sides.
2. Students will simplify linear equations in one variable into the form of  $x=a$ ,  $a=a$ , or  $a=b$  (where a and b are different numbers).
3. Students will write linear equations in one variable for a given number of solutions.

**Essential Questions:** *Students will keep considering...*

- How can you find the value of an unknown quantity?
- What are the possible solutions for a linear equation with one variable?
- How can you write an equation to represent a real world problem?

#### **Student Resources:**

- Thinking Blocks: <http://www.mathplayground.com/thinkingblocks.html>
- Learnzillion: <http://learnzillion.com/>

#### **Vocabulary:**

- Simplify – to solve a given problem and reduce to its simplest term.
- Distributive property – property indicating a special way in which multiplication is applied to addition of two or more numbers in which each term inside a set of parentheses can be multiplied by a factor outside the parentheses, such as  $a(b + c) = ab + ac$

- Like terms – terms whose variables (and their exponents such as the 2 in  $x^2$ ) are the same
- Solution – means of solving a problem; an answer
- Inverse operations – the operation that reverses the effect of another operation
- Variable – a symbol for an unknown value
- Slope – a number that describes the “steepness” or “slant” of a line. It is the constant rate of change.

<b>Content Area: Math</b>	<b>Course: Pre-Algebra - 8</b>	<b>UNIT 3: Functions</b>
<b>Unit Description:</b> Students grasp the concept of a function as a rule that assigns to each input exactly one output. They understand that functions describe situations where one quantity determines another. They can translate among representations and partial representations of functions (noting that tabular and graphical representations may be partial representations), and they describe how aspects of the function are reflected in the different representations.		<b>Unit Timeline:</b> 6 weeks

### DESIRED RESULTS

**Transfer Goal - *Students will be able to independently use their learning to...***

- Make sense of problems and persevere in solving them
- Reason abstractly and quantitatively
- Construct viable arguments and critique the reasoning of others
- Model with mathematics
- Use appropriate tools strategically
- Attend to precision
- Look for and make use of structure
- Look for and express regularity in repeated reasoning

**Understandings – *Students will understand that... (Big Ideas)***

1. Functions describe relationships and will be able to compare and construct a function
2. The equation  $y = mx + b$  will be interpreted as a straight line, where  $m$  and  $b$  are constants.
3. How to recognize linearity in a table or graph by a constant rate of change
4. Compare properties of two functions each represented in a different way (algebraically, graphically, numerically in tables, or by verbal descriptions)
5. Patterns are sequences and sequences are functions with a domain consisting of whole numbers.

6. Non-linear data can be modeled with linear graph models to make predictions
7. They can use similar triangles to identify the slope of a line.

**Essential Questions: *Students will keep considering...***

- What defines a function and how can it be represented?
- What makes a function linear?
- How can linear relationships be modeled and used in real-life situations?
- How do you solve a linear equation algebraically with one solution or no solution?
- How do you use functions to model relationships between quantities?
- How do you define, evaluate, and compare functions?

## UNIT RESOURCES

### **Teacher Resources:**

- Illustrative Mathematics: <http://www.illustrativemathematics.org/>
- Learnzillion: <http://learnzillion.com/>
- Google Drawings: Must have Google account and access GoogleDrive

### **Student Resources:**

- Thinking Blocks: <http://www.mathplayground.com/thinkingblocks.html>
- Learnzillion: <http://learnzillion.com/>
- Google Drawings: Must have Google account and access GoogleDrive

### **Vocabulary:**

- Slope- A measure to find the steepness of a line. If  $(x_1, y_1)$  and  $(x_2, y_2)$  are any two points on the line, the slope of a line is known as  $m$ , is represented by the equation  $m = (y_2 - y_1) / (x_2 - x_1)$
- Y-intercept- The second number in an ordered pair, which indicates the vertical distance of a point from the origin on the coordinate plane.
- Coordinate Grid- A plane that is divided into four regions by a horizontal line called the x-axis and a vertical line called the y-axis.
- Independent Variable- The input of a function.
- Dependent Variable- The output of a function
- X-intercept- the first number in an ordered pair, which indicates the horizontal distance of a point from the origin on the coordinate plane
- Slope-Intercept Form –  $y = mx + b$  when  $m$  is the slope and  $b$  is the y-intercept
- Unit rate- A rate in which the second quantity in the comparison is one unit

- Linear – A relationship where a constant rate of change exists between two variables.
- Rate of change- A ratio that compares the amount of change in a dependent variable to the amount of change in an independent variable
- Origin- the intersection point (0,0) of the x-axis and the y-axis

<b>Content Area: Math</b>	<b>Course: Pre-Algebra - 8</b>	<b>UNIT 4: Systems of Equations</b>
<b>Unit Description:</b> In this unit, students will solve systems of linear equations graphically and algebraically. They analyze linear system solutions and use relationships in data to make decisions about real world problems.		<b>Unit Timeline:</b> 4 weeks

### DESIRED RESULTS

**Transfer Goal - *Students will be able to independently use their learning to...***

- Make sense of problems and persevere in solving them
- Reason abstractly and quantitatively
- Construct viable arguments and critique the reasoning of others
- Model with mathematics
- Use appropriate tools strategically
- Attend to precision
- Look for and make use of structure
- Look for and express regularity in repeated reasoning

**Understandings – *Students will understand that... (Big Ideas)***

1. The solution to a system of two linear equations in two variables is an ordered pair that satisfies both equations
2. Some systems of equations have no solutions (parallel lines)
3. Some systems of equations have infinite solutions (same line)

**Essential Questions: *Students will keep considering...***

- How do you find the value of an unknown quantity?
- What does the intersection point of the graph of two linear functions represent?
- How do you decide whether to solve a system of linear equations graphically or algebraically?
- How does being able to solve systems of equations help you to make decisions in real-world situations?

Students Will Know...	Standard	Students Will Be Able to ...	Standard
<p><b>Prerequisite Skills/Concepts:</b>  <i>Students should already be able to...</i></p> <ul style="list-style-type: none"> <li>• Students will solve linear equations using the distributive property and by combining like terms, including equations with variables on both sides (8.EE.C.7b)</li> <li>• Students will simplify linear equations in one variable into the form of <math>x=a</math>, <math>a=a</math>, or <math>a=b</math> (where <math>a</math> and <math>b</math> are different numbers). **SAMPLE LEARNING PLAN**

**Pre-assessment:** District Benchmark assessment

<u>Understanding</u>	<u>Standards</u>	<u>Major Learning Activities:</u>	<u>Instructional Strategy:</u>	<u>R/R Quadrant:</u>
#1	MP1 MP2 MP4 MP7 8.EE.C.8a 8.EE.C.8b 8.EE.C.8c ISTE-S.3	<p>1. Activity: <b>The Chickens and Pigs Problem</b></p> <ul style="list-style-type: none"> <li>● Objective                              In this lesson, students use trial and error to figure the solution to the chickens and pigs problem. In the process, they deal with the ideas for two equations. First, they combine numbers which add to be the number of heads. Then they try combinations of numbers which work for the chicken and pig legs. From this experience, they create a table and a graph and then write two equations to enter into the calculator or computer. They then explain the equations and graphs.</li> </ul> <p>Materials: Calculators and/or Computers</p> <p>Directions:                      Use the chickens and pigs problem as the introduction to systems of equations. Have students divide into small groups and solve the problem using trial and error. Once they have arrived at a solution, have them share the way they came up with the solution. Then write the equations. Students may need assistance writing the equations. Coach them by asking what they did—they usually come up with combinations of numbers which add to 60—or pigs + chickens = 60. It’s an easy jump from here to an equation for legs.</p> <p>The teacher will need to demonstrate to students how to find enter equations into the calculator or computer and then find the trace to the solution.</p> <p>Students can now graph the equations by plotting points, using a graphing calculator or graphing software such as TI Interactive.</p> <ul style="list-style-type: none"> <li>● Appendix Document:                              Appendix 4.C – Chickens and Pigs</li> </ul>	<ul style="list-style-type: none"> <li>● Cooperative Learning</li> <li>● Similarities and Differences</li> <li>● Nonlinguistic Representations</li> <li>● Technology Integration</li> </ul>	<b>C</b>

Activity: <b>Skate Park Comparison</b></p> <ul style="list-style-type: none"> <li>Objective In this activity, students write and graph a system of equations to find the solution. They will use this information to make reasonable conclusions as to the cost effectiveness when deciding on different skate parks.</li> <li>Appendix Document: Appendix 4.D – Skate Park Comparison</li> </ul>	<ul style="list-style-type: none"> <li>Nonlinguistic Representations</li> <li>Homework and Practice</li> <li>Similarities and Differences</li> </ul>	<b>C</b>
#1	MP2 MP3 MP6 MP7 8.EE.C.8b	<p>3. Activity: <b>Buying Chips and Candy</b></p> <ul style="list-style-type: none"> <li>Objective In this activity, students write a system of equations and solve to figure out the cost of one bag of potato chips and one candy bar. This activity is more guided than most and could be used as an introduction to the elimination method of solving a system of equations.</li> <li>Appendix Document: Appendix 4.E – Buying Chips and Candy Appendix 4.F – Buying Chips and Candy Scoring Rubric</li> </ul>	<ul style="list-style-type: none"> <li>Homework and Practice</li> <li>Similarities and Differences</li> </ul>	<b>B</b>
#2, #3	MP1 MP2 MP3 MP6 MP7 MP8 8.EE.C.7a 8.EE.C.7b	<p>4. Activity: <b>Solution Sort!</b></p> <ul style="list-style-type: none"> <li>Objective In this activity, students analyze, sort and reflect on whether equations have one solution, no solution, or infinitely many solutions.</li> </ul> <p>Materials: For each group –</p> <ul style="list-style-type: none"> <li>1 Copy of Instructional Activity 10_solving multi-step equations for each group with problems 1-16 cut out to make sets of cards for each group</li> <li>1 Copy of Instructional Activity 10_solution sort</li> </ul>	<ul style="list-style-type: none"> <li>Cooperative Learning</li> <li>Summarizing and Note Taking</li> <li>Similarities and Differences</li> </ul>	<b>C</b>

		<p>Directions:</p> <ol style="list-style-type: none"> <li>1. Explain to students that sometimes equations will have one solution, no solution, or infinitely many solutions. Give groups the 16 problem cards and have them sort them into three solution categories.</li> <li>2. Have them write an explanation of why they decided to sort the equations the way they did. Have groups share how they decided to sort the equations and provide their reasoning.</li> <li>3. Now have students solve the equations and have them resort them again. Have them write down their thoughts about what they have discovered about the different forms of the equations. Again, have the groups share with the class their reasoning for their sorts.</li> <li>4. Students should have been able to discover the forms <math>x = a</math>, <math>a = a</math>, and <math>a = b</math> (where <math>a</math> and <math>b</math> are different numbers). Go through problem #18 on “solving multi-step equations” with the class and then challenge the groups to complete question 19 together. Have the groups share and explain the equations they have created for the given number of solutions.</li> <li>5. Have students reflect on the three forms of a linear equation in one-variable and how they can determine the number of solutions that the equation has.</li> </ol> <ul style="list-style-type: none"> <li>● Appendix Document: Appendix 4.G – Solving Multi-Step Equations Appendix 4.H – Solution Sort</li> </ul>		
--	--	---	--	--

## UNIT RESOURCES

### **Teacher Resources:**

- Illustrative Mathematics: <http://www.illustrativemathematics.org/>
- Learnzillion: <http://learnzillion.com/>

### Additional Resources:

- A lesson plan with activities and materials, *Math Island*, can be found at:  
<http://wveis.k12.wv.us/teach21/public/Uplans/LPview.cfm?page=1&tsele1=2&tsele2=116&upidU=566&UPid=1079>

Use the examples provided in the “investigate/explore” section of the lesson instructions to provide direct instruction on how to solve systems of equations using the substitution method. Make sure students take notes and copy down the examples. Give students the “Island of Math” worksheet found here: <http://wveis.k12.wv.us/Teach21/CSO/Upload/LP1079WS2.doc?tsele1=2&tsele2=116&tsele3i=1079>

Have students work with a partner to figure out where the treasure is buried on the Island of Math. Assign practice problems for practice.

### Materials:

- Island of Math Worksheets for pairs of students
  - Island of Math Solutions
  - Practice Problems and Solutions
- 
- Journal Reflection: Have students explain the process of solving a system of equations using substitution. Have them provide an example. Have them explain how they can tell if a system of equations has a common solution by using the substitution method.

### Miscellaneous Resources

- Problem Solving: <http://www.insidemathematics.org/problems-of-the-month/pom-thewheelshop.pdf>
- Extra Practice:
  - <http://www.kutasoftware.com/free.html>
  - <http://middlemathccss.wordpress.com/>
- Videos
  - Spring Break Word Problem: [http://goanimate4schools.com/public\\_movie/0bKHL40jy8bc](http://goanimate4schools.com/public_movie/0bKHL40jy8bc)

### **Student Resources:**

- Thinking Blocks: <http://www.mathplayground.com/thinkingblocks.html>

- Learnzillion: <http://learnzillion.com/>

**Vocabulary:**

- System of linear equations – a set of two or more linear equations containing two or more variables.
- Solution of a system of linear equations with two variables – an ordered pair that satisfies each equation in the system. So, if an ordered pair is a solution, it will make both equations true.

Special systems of linear equations:

- Consistent – when lines intersect in at least one point
- Inconsistent – when lines never cross and gives us no solution
- Independent System – has exactly one solution
- Dependent System – has infinitely many solutions

<b>Content Area: Math</b>	<b>Course: Pre-Algebra - 8</b>	<b>UNIT 5: Pythagorean Theorem</b>
<b>Unit Description:</b> This course is designed to provide students with a strong foundation and conceptual understanding in real-life problem solving. This course will include, but are not limited to the real number systems, expressions, exponents, equations, functions, systems of linear equations, the Pythagorean Theorem and plane geometry.		<b>Unit Timeline:</b> 2 weeks

### DESIRED RESULTS

**Transfer Goal - *Students will be able to independently use their learning to...***

- Make sense of problems and persevere in solving them
- Reason abstractly and quantitatively
- Construct viable arguments and critique the reasoning of others
- Model with mathematics
- Use appropriate tools strategically
- Attend to precision
- Look for and make use of structure
- Look for and express regularity in repeated reasoning

**Understandings – *Students will understand that... (Big Ideas)***

1. Right triangles have a special relationship among the side lengths which can be represented by a model and a formula
2. The Pythagorean Theorem can be used to find the missing side lengths in a coordinate plane and real-world situations.
3. The Pythagorean Theorem and its converse can be proven.

**Essential Questions: *Students will keep considering...***

An Essential Question is meant to:

- Why is the Pythagorean Theorem relevant in everyday life?
- How are triangular relationships important in everyday use?
- Why does the Pythagorean Theorem apply only to right triangles?

Students Will Know...	Standard	Students Will Be Able to ...	Standard

## UNIT RESOURCES

### **Teacher Resources:**

- Illustrative Mathematics: <http://www.illustrativemathematics.org/>
- Learnzillion: <http://learnzillion.com/>
- Graphing tool: <http://nces.ed.gov/NCESKIDS/createagraph>

### **Student Resources:**

- Thinking Blocks: <http://www.mathplayground.com/thinkingblocks.html>
- Learnzillion: <http://learnzillion.com/>
- Graphing tool: <http://nces.ed.gov/NCESKIDS/createagraph>

### **Vocabulary:**

- **Altitude of a Triangle:** The perpendicular distance between a vertex of a triangle and the side opposite that vertex. Sometimes called the height of a triangle. Also, sometimes the line segment itself is referred to as the altitude.
- **Coordinate Plane:** A two-dimensional surface on which points are plotted and located by their x and y coordinates.
- **Coordinate Point of a Plane:** A pair of numbers defining the position of a point on a two-dimensional plane.
- **Converse of Pythagorean Theorem:** If the square of the length of the longest side of a triangle is equal to the sum of the squares of the lengths of the other two sides, the triangle is a right triangle.
- **Distance Formula:** An application of the Pythagorean Theorem based on the distance between two points.
- **Geometric Solid:** The collective term of all bounded three dimensional geometric figures.
- **Height of Solids:** The vertical height (or altitude) which is the perpendicular distance from the top down to the base.
- **Hypotenuse:** The hypotenuse is the side of a right triangle that is directly across from the right angle
- **Irrational:** A real number whose decimal form is non-terminating and non-repeating that cannot be written as the ratio of two integers.
- **Leg of a Triangle:** Either of the two shorter sides of a right triangle. These two sides together form the right angle in the right triangle.

- **Perfect Squares:** The product of a rational number multiplied by itself.
- **Pythagorean Theorem:** A theorem that states that in a right triangle, the square of the length of the hypotenuse equals the sum of the squares of the lengths of the legs.
- **Pythagorean Triples:** A set of positive integers, a, b, and c that fit the rule  $a^2 + b^2 = c^2$
- **Square Root:** The square root of a number is a special value that, when multiplied by itself, gives the number.
- **Radical:** A symbol that is used to indicate square roots.
- **Rational Number:** A number expressible in the form  $a/b$  or  $-a/b$  for some fraction  $a/b$ . The rational numbers include the integers.
- **Right Triangle:** A triangle with exactly one right angle.

<b>Content Area: Math</b>	<b>Course: Pre-Algebra - 8</b>	<b>UNIT 6: Geometry (Transformations)</b>
<b>Unit Description:</b> Geometric sense allows students to comprehend space and shape. Students analyze the characteristics and relationships of shapes and structures, engage in logical reasoning, and use tools and techniques to determine measurement. Students learn that geometry and measurement are useful in representing and solving problems in the real world as well as in mathematics.		<b>Unit Timeline:</b> 9 weeks

### DESIRED RESULTS

**Transfer Goal - *Students will be able to independently use their learning to...***

- Make sense of problems and persevere in solving them
- Reason abstractly and quantitatively
- Construct viable arguments and critique the reasoning of others
- Model with mathematics
- Use appropriate tools strategically
- Attend to precision
- Look for and make use of structure
- Look for and express regularity in repeated reasoning

**Understandings – *Students will understand that... (Big Ideas)***

1. Reflections, translations, and rotations are actions that produce congruent geometric objects.
2. A dilation is a transformation that changes the size of a figure but not the shape.
3. If the scale factor of a dilation is greater than 1, the image resulting from the dilation is an enlargement, and if the scale factor is less than 1, the image is a reduction.
4. A two-dimensional figure is similar to another if the second can be obtained from the first by a sequence of transformations.
5. Two shapes are similar if the lengths of all the corresponding sides are proportional and all the corresponding angles are congruent.

6. Two similar figures are related by a scale factor, which is the ratio of the lengths of corresponding sides.
7. Congruent figures have the same size and shape. If the scale factor of a dilation is equal to 1, the image resulting from the dilation is congruent to the original figure.
8. When parallel lines are cut by a transversal, corresponding angles, alternate interior angles, alternate exterior angles, and vertical angles are congruent.
9. Know the formulas for the volumes of cones, cylinders, and spheres and use them to solve real-world and mathematical problems.

**Essential Questions:** *Students will keep considering...*

- What are transformations and what effect do they have on an object?
- What does the scale factor of a dilation convey?
- How can transformations be used to determine congruency or similarity?
- What angle relationships are formed by a transversal?

## UNIT RESOURCES

### **Teacher Resources:**

- The Geometer's Sketchpad: <http://www.keycurriculum.com/sketchpad-resources>
- Illustrative Mathematics: <http://www.illustrativemathematics.org/>
- Learnzillion: <http://learnzillion.com/>

Additional Resources for Scaffolding Practice:

- Volume Practice: <http://www.engageny.org/resource/grade-8-mathematics-module-5>
- Similarity Practice: <http://www.engageny.org/resource/grade-8-mathematics-module-3>

### **Student Resources:**

- Learnzillion: <http://learnzillion.com/>
- The Geometer's Sketchpad: <http://www.keycurriculum.com/sketchpad-resources>

### **Vocabulary:**

- Transformations – a general term for four specific ways to manipulate the shape of a point, a line, or shape.
- Translation – moving in the same distance and direction
- Rotation – turning around a center
- Reflection – an image of a shape as it would be seen in a mirror
- Line of reflection – another name for reflection symmetry. One half is the reflection of the other half.
- Dilations – to resize something
- Transversal – a line that cuts through at least 2 other lines
- Exterior angles – the angle between any side of a shape, and a line extended from the next side.
- Interior angles – an angle inside a shape
- Angle of rotation – the measure of degrees that a figure is rotated about a fixed point.

<b>Content Area: Math</b>	<b>Course: Pre-Algebra - 8</b>	<b>UNIT 7: Statistics and Probability</b>
<b>Unit Description:</b> Students will apply experience with coordinate planes and linear functions in the study of association between two variables related to a question of interest. They will analyze bivariate measurements on a scatter plot describing shape, center, and spread. The shape is a description of the cloud of points on a plane, the center is the line of best fit, and the spread is how far data points are from the line.		<b>Unit Timeline:</b> 6 weeks

**DESIRED RESULTS**

<p><b>Transfer Goal - Students will be able to independently use their learning to...</b></p> <ul style="list-style-type: none"> <li>● Make sense of problems and persevere in solving them</li> <li>● Reason abstractly and quantitatively</li> <li>● Construct viable arguments and critique the reasoning of others</li> <li>● Model with mathematics</li> <li>● Use appropriate tools strategically</li> <li>● Attend to precision</li> <li>● Look for and make use of structure</li> <li>● Look for and express regularity in repeated reasoning</li> </ul>
--

- Understandings – Students will understand that... (Big Ideas)**
1. Written descriptions, tables, graphs, and equations are useful in representing and investigating relationships between varying quantities.
  2. Different representations (written descriptions, tables, graphs, and equations) of the relationships between varying quantities may have different strengths and weaknesses.
  3. Linear functions may be used to represent and generalize real situations.
  4. Slope and y-intercept are keys to solving real problems involving linear relationship models of data.
  5. Some data may be misleading based on representation.

<p><b>Essential Questions: Students will keep considering...</b></p> <ul style="list-style-type: none"> <li>● What relationships can be seen in bivariate data?</li> <li>● What conclusions can be drawn from data displayed on a graph?</li> <li>● What do the slope and y-intercept of a line of best fit signify on a graph?</li> </ul>
--

- How can graphs, tables, or equations be used to predict data?

Students Will Know...	Standard	Students Will Be Able to ...	Standard
<p><b>Prerequisite Skills/Concepts:</b> <i>Students should already be able to...</i></p> <ul style="list-style-type: none"> <li>• Use the coordinate plane</li> </ul> <p><b>Skills:</b> <i>Students will be able to ...</i></p> <ul style="list-style-type: none"> <li>• Construct and interpret scatter plots and two-way tables for patterns such as positive or negative association, linearity or curvature, and outliers. (8.SP.A.1)</li> <li>• Generate an approximate line of best fit. (8.SP.A.2)</li> <li>• Use the equation of a linear model to solve problems in the context of bivariate measurement data. (8.SP.A.3)</li> <li>• Interpret the slope and y-intercept of the line of best fit in context. (8.SP.A.3)</li> <li>• Show that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. (8.SP.A.4)</li> <li>• Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. (8.SP.A.4)</li> <li>• Use relative frequencies calculated for rows or columns to describe possible association between the two variables. (8.SP.A.4)</li> </ul>		<p><b><u>Mathematical Practices</u></b></p> <p>Make sense of problems and persevere in solving them.</p> <p>Reason abstractly and quantitatively.</p> <p>Construct viable arguments and critique the reasoning of others.</p> <p>Model with mathematics.</p> <p>Use appropriate tools strategically.</p> <p>Attend to precision.</p> <p>Look for and make use of structure.</p> <p>Look for and express regularity in repeated reasoning.</p> <p><b><u>Grade Level Standards</u></b></p> <p><b>Investigate patterns of association in bivariate data.</b></p> <p>Construct and interpret scatter plots for bivariate measurement data to investigate patterns of association between two quantities. Describe patterns such as clustering, outliers, positive or negative association, linear association, and nonlinear association.</p> <p>Know that straight lines are widely used to model relationships between two quantitative variables. For scatter plots that suggest a linear association, informally fit a straight line, and informally assess the model fit by judging the closeness of the data points to the line.</p>	<p>MP1</p> <p>MP2</p> <p>MP3</p> <p>MP4</p> <p>MP5</p> <p>MP6</p> <p>MP7</p> <p>MP8</p> <p><b>8.SP.A</b></p> <p>8.SP.A.1</p> <p>8.SP.A.2</p>

		<p>Use the equation of a linear model to solve problems in the context of bivariate measurement data, interpreting the slope and intercept. <i>For example, in a linear model for a biology experiment, interpret a slope of 1.5 cm/hr as meaning that an additional hour of sunlight each day is associated with an additional 1.5 cm in mature plant height.</i></p>	8.SP.A.3
		<p>Understand that patterns of association can also be seen in bivariate categorical data by displaying frequencies and relative frequencies in a two-way table. Construct and interpret a two-way table summarizing data on two categorical variables collected from the same subjects. Use relative frequencies calculated for rows or columns to describe possible association between the two variables. <i>For example, collect data from students in your class on whether or not they have a curfew on school nights and whether or not they have assigned chores at home. Is there evidence that those who have a curfew also tend to have chores?</i></p>	8.SP.A.4

### UNIT RESOURCES

#### **Teacher Resources:**

- Illustrative Mathematics: <http://www.illustrativemathematics.org/>
- Learnzillion: <http://learnzillion.com/>
- Videos: <http://khanacademy.org>

#### Additional Resources:

- Additional examples can be found in the Arizona Mathematics Standards Articulated by Grade Level, page 29-30, <http://www.azed.gov/wpcontent/uploads/PDF/MathGr8.pdf>
- Practice Lessons may be downloaded at <http://www.regentsprep.org/Regents/math/ALGEBRA/AD4/indexAD4.htm>
  - Lesson 1 – Scatter Plots and Correlation
  - Lesson 2 – Line of Best Fit and Prediction (without a graphing calculator)
  - Lesson 3 – Line of Best Fit and Prediction (with a graphing calculator)
  - Lesson 4 – Practice with Scatter Plots and More
  - Lesson 5 – More Advanced Scatter Plots (without a calculator)
- A lesson plan with activities, *Exploring Linear Data*, can be found at <http://illuminations.nctm.org/LessonDetail.aspx?id=L298>  
Students will be instructed to model linear data in a variety of settings that range from car repair costs to sports to medicine. Students work to construct scatterplots, interpret data points and trends, and investigate the notion of line of best fit.

#### **Student Resources:**

- Learnzillion: <http://learnzillion.com/>
- Videos: <http://khanacademy.org>

#### **Vocabulary:**

- Bivariate data – Data that has two variables. The quantities from these two variables are often displayed using a scatterplot.

- Scatter plot – A scatterplot is a type of graph that plots points to show a relationship between two variables.
- Line of best fit – A straight line that best represents that data on a scatterplot
- Outlier – Numbers in a set of data that lie outside the pattern of the data are called outliers.
- Positive/negative association – (Correlation) – Describes the strength of a relationship between two variables.
