CITY OF WATERBURY

Energy-Savings Performance Contract with Noresco,LLC for Energy Efficient Building Upgrades RFP No.5167

July 5, 2016

DEPARTMENT OF FINANCE

THE GITY OF WATERBURY

CONNECTICUT

Date: July 5, 2016

To: Paul Pernerewski, President, Board of Aldermen

Members, Board of Aldermen

Board of Education Commissioners

Mayor Neil M. O'Leary

Dr. Kathleen M. Ouellette, Superintendent of Schools

From: Michael LeBlanc, Director of Finance

Subject: \$29,133,741 Energy-Savings Performance Contract with Noresco, LLC

For Energy Efficient Building Upgrades - RFP No. 5167

Kindly give favorable consideration by approving the attached guaranteed energy savings performance contract for Energy Efficient Building Upgrades with Noresco, LLC. This guaranteed energy savings performance contract will provide for the implementation of fourteen (14) comprehensive energy savings measures effecting nearly every school and general government building.

Energy Savings Measures (ESMs)	Implementation Price	Estimated Incentives	Annual Cost Savings
Interior Lighting Improvements	\$2,099,731	\$489,680	\$344,408
Exterior Lighting Improvements	\$986,752	\$264,504	\$127,455
Variable Speed Chillers/ Pumps	\$1,205,930	\$35,049	\$43,149
AHU Damper Refurbishments	\$321,887	\$46,024	\$29,038
EMS Upgrades & Expansion	\$5,346,414	\$1,536,964	\$621,167
Building Weatherization	\$584,745	\$146,921	\$47,528
Pipe & Fitting Insulation	\$804,567	\$268,882	\$79,239
Steam Traps & TRVs	\$784,363	\$272,573	\$93,420
Plug Load Controls	\$176,855	\$60,372	\$27,543
Walk-In Cooler Controls	\$147,462	\$29,329	\$13,115
Steam Boilers	\$5,985,553	\$103,757	\$69,948
Hot Water Boilers & Pool Heating Systems	\$7,409,455	\$445,829	\$153,827
Solar Photovoltaics	\$305,489	\$0	\$27,863
New Electrical Switchgear & Backup Power Generation	\$1,255,855	\$0	\$0
Project Totals	\$27,415,059	\$3,699,854	\$1,677,700

This energy savings performance contract will provide for significant reductions in energy consumption and building energy costs in addition to improving building comfort, reducing the risk of system failures, extending the useful life of replaced equipment through enhanced building management systems and providing for critical back-up equipment. These energy conservation measures will qualify for an estimated \$3.7 million comprehensive energy efficiency incentive that will reduce the capital cost amount to be financed. The guaranteed energy cost savings will fund the annual debt service on the capital investment financing and still provide for a positive cash flow exceeding \$80,000 each year. The projected savings will grow substantially once the financing repayment period ends.

The City previously engaged ECG Engineering, P.C. to work closely with the City's Energy Task Force and to serve as the City's Owner Representative throughout the planning, evaluation, selection, contracting and implementation of a guaranteed energy savings performance contract. The responses to the City's request for proposal for Energy-Savings Performance Contract Services, RFP No. 5167, were received on April 30, 2015. Responses were received from the following Energy Service Providers:

Ameresco, ConEd, Honeywell, Johnson Controls & Noresco.

On May 8, 2015, the City's Energy Consultant, ECG Engineering, P.C. (ECG) provided the results of a preliminary evaluation of the proposals. ECG determined that all five respondents met the minimum qualifications called for in RFP No. 5167. ECG was instructed to proceed forward with a comprehensive detailed analysis of each of the proposals.

The Purchasing Director established a Selection Committee comprised of the following members that met on several occasions to review and discuss the responses to this RFP with ECG representatives.

City Committee Representatives:

- Director of Public Works Dave Simpson
- Battalion Chief Jim Peplau
- Staff Attorney Lynn McHale
- Director of Purchasing Rocco Orso
- Director of Finance Michael LeBlanc

Board of Education Committee Members:

- Education Chief of Staff & Chief Operating Officer Paul Guidone & Gary Miller
- School Facilities Manager John Cross

During the summer of 2015 the Selection Committee & ECG Representatives completed the proposal review process and interviewed all five (5) respondents in September 2015. The Selection Committee & ECG met subsequently to assess both ECG's and each of the Selection Committee Member's summary of findings. Past relevant experience, the proposed project team, quality of presentation, proposed project scope and several other factors were considered by ECG and the Selection Committee throughout the evaluation process. The Selection Committee unanimously concluded that Noresco was the best qualified Energy Service Provider to most effectively provide the desired services for this energy efficiency project initiative and should therefore be awarded the contract.

Over the past seven months Noresco performed an at-risk Investment Grade Energy Audit (IGEA) which would be used to establish the agreed upon detailed scope of work to be included in energy savings performance contract. The IGEA was revised & finalized on June 29, 2016 and is incorporated into the Contract with Noresco as Exhibit B: Investment Grade Energy Audit and Project Development Proposal. As the Exhibit B - IGEA document contains 1870 pages,

the following Exhibit B – IGEA Appendixes have been excluded from the attached bound contract documents provided for your review.

Exhibit B: IGEA Report Revised June 29, 2016 Appendixes – Not Included:

Appendix 1: CalculationsAppendix 2: 35% Drawings

Appendix 3: Cutsheets

Appendix 4: Audit Data

One complete copy of the IGEA including the Exhibit B Appendixes has been filed with the City Clerk and is available for review.

Exhibit A: Energy-Savings Performance Project Statement of Work

Exhibit B: Investment-Grade Energy Audit and Project Development Proposal

This Contract (the "Contract") is made by and between, NORESCO, LLC, a duly registered foreign limited liability company with a principal place of business at 1 Research Drive, Suite 400C, Westborough, Massachusetts, 01581, acting by and through David G. Mannherz, its Executive Vice President and CFO (the "Contractor" or "QESP"), and the City of Waterbury, acting herein by and through Neil M. O'Leary, Mayor of the City of Waterbury, City Hall, 235 Grand Street, Waterbury, Connecticut 06702 (the "City" or "Owner" or "Municipality").

The Contractor and the City agree as follows:

- 1. <u>Definitions</u>. Unless otherwise indicated, the following terms shall have the following corresponding definitions for this Contract and all exhibits, unless otherwise noted in the exhibits, in which case the definition in the exhibit controls:
 - (a) Acts: Those acts of commission and omission.
 - (b) Amend (in any part of speech, however conjugated): Any altering, by addition, deletion, modification or otherwise, of any part of this Contract, including extensions, or its exhibits or Final Exhibits.
 - (c) Claims: All actions, suits, claims, demands, investigations and proceedings of any kind, open, pending or threatened, whether mature, unmatured, contingent, known or unknown, at law or in equity, in any forum.
 - (d) Confidential Information: Any information about a client, including but not limited to first name and last name, or first initial and last name, in combination with any one or more of the following related to such client: (a) Social Security Number; (b) driver's license number or State-issued identification card number; (c) date of birth; and (d) financial account number, or credit or debit card number, with or without any required security code, access code, personal identification number or password, that would permit access to a client's financial account. Without limiting the foregoing, Confidential Information shall also include any information that the Owner classifies as "confidential" or "restricted." Confidential Information shall not include information that may be lawfully obtained from publicly available sources or from federal, state, or local government records which are lawfully made available to the general public.
 - (e) Confidential Information Breach: An instance where an unauthorized person or entity accesses Confidential Information in any manner, including but not limited to the following occurrences: (1) any Confidential Information that is not encrypted or protected is misplaced, lost, stolen or in any way compromised; (2) one or more third parties have had access to or taken control or possession of any Confidential Information that is not encrypted or protected without prior written authorization from the State; (3) the unauthorized acquisition of encrypted or protected Confidential Information together with the confidential process or key that is capable of compromising the integrity of the Confidential Information; or. (4) if there is a substantial risk of identity theft or fraud to the client, the Contractor, the Owner or State.
 - (f) Contract: In addition to this agreement and all exhibits, schedules, and appendices thereto, the following are incorporated by reference and made a part hereof this Contract:
 - i. RFP No. 5167 (acknowledged by the Contractor as having been received),

- ii. RFP Addendum #1 to RFP No. 5167, dated February 25, 2015; Addendum #2 to RFP No. 5167, dated February 25, 2015; Addendum #3 to RFP No. 5167, dated March 12, 2015; Addendum #4 to RFP No. 5167, dated March 30, 2015; Addendum #5 to RFP No. 5167, dated April 2, 2015; and Addendum #6 to RFP No. 5167, dated April 9, 2016 (acknowledged by the Contractor as having been received),
- iii. Contractor's response to RFP No. 5167 dated April 30, 2015 (acknowledged by the Contractor as having been received),
- iv. Annual Statement of Financial Interests; Disclosure and Affidavit Re:
 Outstanding Obligations to the City; Debarment Certification; Corporate
 Resolution (incorporated by reference).
- v. Certificates of Insurance (incorporated by reference),
- vi. Performance Bond and Payment Bond (incorporated by reference),
- vii. Any and all amendment(s) and Change Orders issued by the City after execution of Contract (incorporated by reference),
- viii. All applicable Federal, State and local statutes, regulations, charter and ordinances (incorporated by reference),
- ix. All permits (including, but not limited to, City of Waterbury Building permit(s)) and licenses (incorporated by reference).
- (g) Contractor Parties: A Contractor's members, directors, officers, shareholders, partners, managers, principal officers, representatives, agents, servants, consultants, employees or any one of them or any other person or entity with whom the Contractor is in privity of oral or written contract and the Contractor intends for such other person or entity to Perform under the Contract in any capacity.
- (h) Cost Effective: The savings resulting from the energy-savings measures outweigh the costs of the measures, including, but not limited to, any financing costs, provided the payback period for any financing provided pursuant to 2011 Conn. Pub. Acts 80, Section 23 ("Public Act 11-80") is less than the functional life of the proposed energy-savings measures and the payback period does not exceed eighteen years.
- (i) Day: consecutive calendar day unless otherwise specified.
- (j) Owner: The City of Waterbury.
- (k) Energy-Savings Measure (ESM): Any improvement to facilities or other energy-consuming systems designed to reduce energy or water consumption and operating costs and increase the operating efficiency of facilities or systems for their appointed functions. "Energy-savings measure" includes, but is not limited to, one or more of the following:
 - 1. Replacement or modification of lighting and electrical components, fixtures or systems, including daylighting systems, improvements in street lighting efficiency or computer power management software;

- 2. Class I renewable energy or solar thermal systems;
- 3. Cogeneration systems that produce steam or forms of energy, such as heat or electricity, for use primarily within a building or complex of buildings;
- 4. Automated or computerized energy control systems;
- 5. Heating, ventilation or air conditioning system modifications or replacements;
- 6. Indoor air quality improvements that conform to applicable building code requirements;
- 7. Water-conserving fixtures, appliances and equipment or the substitution of non-water- using fixtures, appliances and equipment, or water-conserving landscape irrigation equipment; and
- 8. Changes in operation and maintenance practices;
- 9. Replacement or modification of windows or doors; and
- 10. Installation or addition of insulation.
- (l) Energy Savings Performance Contract (ESPC): A contract between the State Agency or Municipality and a qualified energy service provider for evaluation, recommendation and implementation of one or more energy-savings measures. An energy-savings performance contract shall be a guaranteed energy-savings performance contract, which shall include, but not be limited to, (A) the design and installation of equipment and, if applicable, operation and maintenance of any of the measures implemented; and (B) a guarantee of annual energy savings.
- (m) Equipment: Goods which the QESP is to install in accordance with and as set forth in **Schedule R (Equipment to Be installed by QESP)**, to **Exhibit A** to this Contract, Energy-Savings Performance Project Statement of Work ("SOW").
- (n) Exhibits: The Exhibits attached to this Contract either (a) in completed form as of the effective date of this Contract or (b) in blank or template form and which the Owner and Contractor subsequently negotiate, fill in, finalize, sign and date, which become effective upon execution thereof.
- (o) Force Majeure: Events that materially affect the cost of the Work or the time schedule within which to Perform and are outside the control of the party asserting that such an event has occurred, including, but not limited to, labor troubles unrelated to the Contractor, failure of or inadequate permanent power, unavoidable casualties, fire not caused by the Contractor, extraordinary weather conditions, disasters, riots, acts of God, insurrection or war.
- (p) Goods: All things which are movable, including, but not limited to, supplies, materials, equipment, hardware, software, specially manufactured things, a component incorporated into another thing and things that are attached to real property and that may be severed from the real property without material harm to the things, together and with any and all additions, modifications, attachments, replacements and parts.
- (q) Investment-Grade Energy Audit or (IGEA): A study by the QESP selected for a particular energy-savings performance contract project which includes detailed descriptions of the improvements recommended for the project, the costs of the improvements, and the utility and operations and maintenance cost savings projected to result from the recommended improvements.
- (r) Municipality: The City of Waterbury, including its local board of education.

- (s) Operation and Maintenance Cost Savings: A measurable decrease in operation and maintenance costs and future replacement expenditures that is a direct result of the implementation of one or more utility cost savings measures. Such savings shall be calculated in comparison with an established baseline of operation and maintenance costs.
- (t) Perform (in any part of speech, however conjugated): All Acts and things of the Contractor and Contractor Parties necessary or appropriate to execute, fulfill or accomplish fully this Contract and the Exhibits according to their terms.
- (u) Qualified Energy Service Provider (QESP): A corporation with a record of successful energy performance contract projects experienced in the design, implementation and installation of energy efficiency and facility improvement measures, the technical capabilities to ensure such measures generate energy and operational cost savings, and the ability to secure the financing necessary to support energy savings guarantees.
- (v) Records: All working papers and such other information and materials as may have been accumulated by the Contractor in performing the Contract, including but not limited to, documents, data, plans, books, computations, drawings, specifications, notes, reports, records, estimates, summaries and correspondence, kept or stored in any form.
- (w) Services: The performance of labor or work, as specified in the applicable Exhibits.
- (x) Solicitation: The Municipality request inviting proposals for Work resulting in this Contract. This Contract shall be governed by the statutes, regulations and procedures of the State of Connecticut and City of Waterbury.
- (y) State Agency: has the same meaning as provided in Conn. Gen. Stat. Sec. 1-79 and means any office, department, board, council, commission, institution, constituent unit of the state system of higher education, vocational-technical school or other agency in the executive, legislative or judicial branch of state government.
- (z) Termination: An end to the Contract or SOW, as applicable, prior to the end of their respective terms whether effected pursuant to a right which the Contract or SOW creates or for a breach.
- (aa) Title: all ownership, title, licenses, rights and interest, including, but not limited to, perpetual use, of and to the Work or Goods, as applicable.
- (bb) Utility Cost Savings: Any utility expenses eliminated or avoided on a long-term basis as a result of equipment installed or modified, or services performed by a qualified energy service provider; "utility cost savings" does not include merely shifting personnel costs or similar short-term cost savings.
- (cc) Work: Equipment or Services or both to be performed in accordance with the Exhibits.

2. Contract Time: Contract Extension.

(a) Subject to the remainder of this provision, and unless Terminated in accordance with any other provision of this Contract or extended by amendment, the Contractor shall Substantially Complete all Work and Services under this Contract (except for the Work and Services included within QESP's Annual Services) within SEVEN HUNDRED AND THIRTY (730)

consecutive calendar days of the City's issuance of a written notice to proceed, shall meet all Project Milestones identified within the City's written notice to proceed, and shall reach Final Completion (except for the Work and Services included within QESP's Annual Services) within ONE THOUSAND AND NINETY-FIVE (1095) consecutive calendar days of the City's issuance of a written notice to proceed. All Work and Services included within QESP's Annual Services shall be completed within five (5) years of the Commencement Date.

- (b) Time is and shall be of the essence for all Project Milestones, Substantial Completion Date and the Final Completion Date for the Project. The Contractor further agrees that the Project shall be prosecuted regularly, diligently and uninterruptedly and at such rate of progress as will insure full completion thereof within the Contract Time stated above. It is expressly understood and agreed, by and between the Contractor and City, that the Contract Time is reasonable for the completion of the Project.
- (c) The Contractor shall pay to the City the sum of **FIVE HUNDRED DOLLARS AND ZERO CENTS (\$500.00)** per calendar day for each and every calendar day for which the Contractor is in default in completing the Work beyond the time for Substantial Completion as set forth in this Article 2 as it may be amended from time to. The preceding sum is hereby agreed upon not as a penalty, but as liquidated damages that the City shall suffer due to such default. The City shall have the right to deduct the amount of any such damages from any monies due the Contractor under this Contract.
- (d) The parties may extend this Contract, prior to Termination, and only in accordance with the Contract Amendments Section in this Contract.

3. Rejected Items; Abandonment.

- (a) The Contractor may deliver, cause to be delivered, or, in any other way, bring or cause to be brought, to any premises or other destination, Equipment, as samples or otherwise, and other supplies, materials, equipment or other tangible personal property. Provided that the Owner has paid the Contractor for the work performed to date, the Owner may, by written notice and in accordance with the terms and conditions of the Contract, direct the Contractor to remove any or all such Equipment (the "Rejected Equipment") and any or all other supplies, materials, equipment or other tangible personal property (collectively, the "Contractor Property") from and out of Owner premises and any other location which the Owner manages, leases or controls. The Contractor shall remove the Rejected Equipment and the Contractor Property in accordance with the terms and conditions of the written notice. Failure to remove the Rejected Equipment or the Contractor Property in accordance with the terms and conditions of the written notice shall mean, for itself and all Contractor Parties that:
 - they have voluntarily, intentionally, unconditionally, unequivocally and absolutely abandoned and left unclaimed the Rejected Equipment and Contractor Property and relinquished all Title to the Rejected Equipment and Contractor Property with the specific and express intent of (A) terminating all of their Title to the Rejected Equipment and Contractor Property, (B) vesting Title to the Rejected Equipment and Contractor Property in the Owner and (C) not ever reclaiming Title or any future rights of any type in and to the Rejected Equipment and Contractor Property;
 - there is no ignorance, inadvertence or unawareness to mitigate against the intent to abandon the Rejected Equipment or Contractor Property;

- (3) they vest authority, without any further act required on their part or the Owner's part, in the Owner to use or dispose of the Rejected Equipment and Contractor Property, in the Owner's sole discretion, as if the Rejected Equipment and Contractor Property were the Owner's own property and in accordance with law, without incurring any liability or obligation to the Contractor or any other party;
- (4) if the Owner incurs any costs or expenses in connection with disposing of the Rejected Equipment and Contractor Property, including, but not limited to, advertising, moving or storing the Rejected Equipment and Contractor Property, auction and other activities, the Owner shall invoice the Contractor for all such cost and expenses and the Contractor shall reimburse the Owner no later than thirty (30) days after the date of invoice; and
- (5) they do remise, release and forever discharge the Owner and its employees, departments, commissions, boards, bureaus, agencies, instrumentalities or political subdivisions and their respective successors, heirs, executors and assigns (collectively, the "Owner and Its Agents") of and from all Claims which they and their respective successors or assigns, jointly or severally, ever had, now have or will have against the Owner and Its Agents arising from the use or disposition of the Rejected Equipment and Contractor Property.
- (b) The Contractor shall secure from each Contractor Party, as appropriate, such document or instrument as necessary or appropriate as will vest in the Contractor plenary authority to bind the Contractor Parties to the full extent necessary or appropriate to give full effect to all of the terms and conditions of this Section. The Contractor shall provide, no later than fifteen (15) days after receiving a request from the Owner, such information as the Owner may require to evidence, in the Owner's sole determination, compliance with this Section.

4. Not Used.

5. IGEA Process.

The IGEA Report, dated June 29, 2016, is attached as Exhibit B and made a part hereof.

6. Energy-Savings Performance Project Statement of Work.

The Owner and QESP have used the IGEA Report as the basis for negotiating the SOW, which is attached hereto as **Exhibit A** and made a part hereof.

7. Order and Delivery.

The Contract shall bind the Contractor to furnish and deliver the Work in accordance with all applicable Exhibits.

8. Contract Amendments.

No amendment to or modification or other alteration of the Contract, including extensions, shall be valid or binding upon the parties unless made in writing, duly authorized and signed by the parties hereto.

9. Assignments.

(a) The Contractor shall not assign any of its rights or obligations under the Contract, voluntarily or otherwise, in any manner without the prior written consent of the Owner. Owner may void any purported assignment in violation of this Assignments Section and declare the Contractor in Material Breach. Any Termination by Owner for a Material Breach is without prejudice to the Owner's rights or possible Claims.

10. Termination.

- (a) Notwithstanding any provisions in this Contract, Owner, through a duly authorized employee, may terminate this Contract at any time for the convenience of the City, ("Termination for Convenience") by a notice in writing from the City to the Contractor. If this Contract is terminated by the City as provided herein, the Contractor will be paid an amount which bears the same ratio to the total compensation as the services actually performed bear to the total services of the Contractor covered by this Contract, less payments of compensation previously made.
- (b) Notwithstanding any provisions in this Contract, Owner, through a duly authorized employee, may Terminate the Contract for a Material Breach, but only after making a written determination that the Contractor is in Material Breach under the Material Breach Section of this Contract and providing Contractor the right to cure as delineated in that section.
- (c) Notwithstanding any provisions in this Contract, Owner, through a duly authorized employee, may terminate the Contract for a breach other than a Material Breach, but only after making a written determination that the Contractor is in breach of Contract and has failed to cure the breach in accordance with the Other Breaches Section of this Contract.
- (d) Termination for Non-Appropriation or Lack of Funding. The Contractor acknowledges that the City is a municipal corporation and that this Contract is subject to the appropriation and disbursement of funds by the City sufficient for this Contract for each budget year in which this Contract is in effect. The Contractor therefore agrees that the City shall have the right to terminate this Contract in whole or in part without penalty to the City in the event that sufficient funds to provide for City payment(s) under this Contract is not appropriated, not authorized, or not made available, or such funding has been reduced. In the event this Contract is subject, in whole or in part, to the appropriation and disbursement of Federal and/or State funds and those Federal and/or State funds are not appropriated or are not disbursed to the City, the Contractor hereby agrees that the City shall have the right to terminate this Contract in whole or in part without penalty to the City.
 - (1) **Effects of Nonappropriation.** If funds to enable the City to effect continued payment under this Contract are not appropriated, authorized or otherwise made available by law, the City shall have the right to terminate this Contract without penalty at the end of the last period for which funds have been appropriated, authorized or otherwise made available by law by giving written notice of termination to the Contractor.
 - (2) **Effects of Reduced Levels of Funding**. If funding is reduced by law, or funds to pay the Contractor for the agreed to level of the products, services and functions to be provided by the Contractor under this Contract are not appropriated, authorized or otherwise made available by law, the City may,

- upon seven (7) business days written notice to the Contractor, reduce the level of the products, services or functions in such manner and for such periods of time as the City may elect. The charges payable under this Contract shall be equitably adjusted to reflect such reduced level of products, services or functions and the parties shall be afforded the rights set forth in this Contract.
- (3) **No Payment for Lost Profits.** In no event shall the City be obligated to pay or otherwise compensate the Contractor for any lost or expected future profits.
- (4) Rights Upon Termination-Termination for Lack of Funding. In the event of termination by the City for lack of funding (or per Section 10(a) above), the City shall pay the Contractor for all labor, services, equipment, materials, reports, plans, specifications, drawings, deliverables, incidentals, etc. (including any holdbacks) installed and delivered to the City as of the Termination Date and the Contractor shall relinquish to the City any applicable interest, title and ownership including, but not limited to perpetual use of any proprietary rights in and to said labor, services, equipment, materials, reports, plans, specifications. drawings, deliverables, incidentals, etc. delivered to, in possession of and paid for by the City (except to the extent any invoiced amount is disputed). The Contractor shall be required to exercise commercially reasonable efforts to mitigate damages. In the event of a termination for Lack of Funding or Convenience the City and the Contractor may negotiate a mutually acceptable payment to the Contractor for reasonable demobilization expenses. Said demobilization expenses, if any, shall be handled in accordance with the provision of this Contract pertaining to changes in the Work.
- (e) Owner shall send the notice of Termination via certified mail, return receipt requested, to the Contractor at the most current address which the Contractor has furnished to Owner for purposes of correspondence, or by hand delivery. Upon receiving the notice from Owner, the Contractor shall immediately discontinue all services affected in accordance with the notice, undertake all commercially reasonable efforts to mitigate any losses or damages, and deliver to the appropriate department all Records. The Records are deemed to be the property of the Owner and the Contractor shall deliver them to the Owner no later than thirty (30) days after the Termination of the Contract or fifteen (15) days after the Contractor receives a written request from Owner for the Records. The Contractor shall deliver those Records that exist in electronic, magnetic or other intangible form in a non-proprietary format, such as, but not limited to, ASCII or .TXT.
- (f) Upon receipt of a written notice of Termination from Owner, the Contractor shall cease operations as Owner directs in the notice, and take all actions that are necessary or appropriate, or that Owner may reasonably direct, for the protection, and preservation of the Equipment and any other property. Except for any work which Owner directs the Contractor to Perform in the notice prior to the effective date of Termination, and except as otherwise provided in the notice, the Contractor shall terminate or conclude all existing subcontracts and purchase orders and shall not enter into any further subcontracts, purchase orders or commitments.
 - 1. **Assumption of Subcontracts.** In the event of termination, the City shall have the right to assume, at its option, any and all subcontracts for products, services and functions provided exclusively under this Contract.

- (g) Owner shall, within forty-five (45) days of the effective date of Termination, and if appropriate in accordance with **Exhibit A**, reimburse the Contractor for its Performance to the extent rendered and accepted by the Owner and that is appropriate in accordance with the applicable Exhibits. However, the Contractor is not entitled to receive and the Owner is not obligated to tender to the Contractor any payments for anticipated or lost profits. Upon request by the Owner and after payment is made by the Owner to Contractor for any outstanding invoices or costs listed the Contractor shall assign to the Owner, or any replacement contractor which the Owner designates, all subcontracts, purchase orders and other commitments, deliver to the Owner all Records and other information pertaining to its Performance, and remove from Owner premises, whether leased or owned, all of Contractor's property, equipment, waste material and rubbish related to its Performance, all as the Owner may request.
- (h) For breach or violation of any of the provisions in the Representations and Warranties Section, Owner may Terminate the Contract in accordance with its terms and revoke any consents to assignments given as if the assignments had never been requested or consented to, without liability to the Contractor or Contractor Parties or any third party.
- (i) Upon Termination of the Contract, all rights and obligations shall be null and void, so that no party shall have any further rights or obligations to any other party, except with respect to the sections, which survive Termination.
- (j) Termination of the Contract pursuant to this Section shall not be deemed to be a breach of contract by Owner.
- 11. Events of Material Breach; Right to Cure. The occurrence of any one or more of the following events shall constitute a material breach ("Material Breach") of this Contract; this section shall apply to Contractor Parties, such that if a Contractor Party commits a Material Breach then the Contractor shall be responsible in all respects for that Material Breach and its consequences under this Contract as if the Contractor itself had committed the Material Breach:
 - (a) The failure of Contractor or Owner to comply, respectively, with any material covenant or condition of this Contract, which failure is not cured within fifteen (15) days after receipt of notice of such failure from the non-failing party; provided that if such failure is one that cannot be cured within fifteen (15) days with the exercise of reasonable diligence, such failure shall not be deemed to be a Material Breach if the failing party is diligently proceeding to cure such failure; provided further that such extended cure period shall not exceed an additional thirty (30) days beyond the fifteen (15) days without the prior written consent of the non-failing party, which consent shall not be unreasonably withheld.
 - (b) The failure of Contractor to Perform materially, including, but not limited to, complying fully with all terms and conditions of the Contract, including applicable Exhibits, which failure is not cured within fifteen (15) days after receipt of notice of such failure from the Owner; provided that if such failure is one that cannot be cured within fifteen (15) days with the exercise of reasonable diligence, such failure shall not be deemed to be a Material Breach if the Contractor is diligently proceeding to cure such failure; provided further that such extended cure period shall not exceed an additional thirty (30) days beyond the fifteen (15) days without the prior written consent of the Owner, which consent shall not be unreasonably withheld.

- (c) The appointment of any receiver for the Contractor, or the execution of any other process or any action by a court of competent jurisdiction against the Contractor which is not vacated, dismissed or set aside or for which the Contractor fails to take steps and diligently prosecute, toward the vacation, dismissal or set aside, within a period of thirty (30) days from such appointment or execution and which materially interferes with the Contractor's ability to Perform under this Contract.
- (d) A writ of attachment or execution is levied on any part of the Equipment, and is attributable to the Contractor, and is not vacated, dismissed or set aside, or for which the Contractor fails to take steps and diligently prosecute, toward the vacation, dismissal or set aside, within thirty (30) days from such levy.
- (e) The filing of any vendor's, mechanic's, laborer's, materialman's or other similar lien or encumbrance (collectively, "Liens") based upon furnishing of Work, which the QESP does not discharge within one hundred twenty (120) calendar days after it receives notice of the Liens.
- (f) Any representation or warranty of the Contractor or Owner that is false or misleading (collectively, "Falsehood") in any material respect and which Falsehood is not cured within fifteen (15) days of receipt of notice of such Falsehood from the other party; provided that, if such Falsehood fails to be cured within fifteen (15) days with the exercise of reasonable diligence, such failure shall not be deemed to be a Material Breach if the party who made the representation or warranty is diligently proceeding to cure such Falsehood; provided further that such extended cure period shall not exceed an additional thirty (30) days beyond the fifteen (15) days without the prior written consent of the other party, which consent shall not be unreasonably withheld.
- (g) The Contractor abandons Performance, or, in the reasonable judgment of the Owner, fails to provide sufficient materials or qualified workers to adequately prosecute the work in accordance with the applicable Exhibits A & B.
- (h) Any proceeding is instituted against the Contractor seeking to adjudicate it as bankrupt or insolvent, and the Contractor is not appointed debtor in possession by the court.
- (i) (1) the Contractor makes a general assignment for the benefit of creditors, (2) a receiver is appointed on account of the insolvency of the Contractor, or (3) the Contractor files a petition seeking to take advantage of any other law relating to bankruptcy, insolvency, reorganization, winding up or composition or reorganization of debts and, in the case of any proceeding in referred to in this subsection, such proceeding is not dismissed, or as to which the Contractor fails to take steps and diligently prosecute toward a dismissal, within sixty (60) days after such filing.
- (j) There is a material adverse change in the financial condition or operations or the business of the Contractor that substantially affects its ability to Perform in accordance with this Contract.
- (k) An assignment or purported assignment, in whole or in part, of the Contract or any Final Exhibit, including specifically **Exhibit A**, without the prior written approval of the Owner, as appropriate.
- (I) Any other event or condition, which **Exhibit A** identifies as a Material Breach.

- 12. Other Breaches; Right to Cure; Exercise of Remedies. This Section governs all breaches except Material Breaches. If either party breaches the Contract in any respect, the non breaching party shall provide written notice of such breach to the breaching party and afford the breaching party an opportunity to cure the breach within ten (10) days from the date that the breaching party receives such notice. Any greater time period provided for in the notice shall trump such ten (10) days. Such right to cure period shall be extended if the non-breaching party is satisfied that the breaching party is making a good faith effort to cure but the nature of the breach is such that it cannot be cured within the right to cure period. If a breach remains uncured after the expiration of a right to cure period, including any allowed extensions, then the following remedies are available to the parties:
 - (a) if the QESP breaches, then the Owner may exercise and any all remedies at law or equity, including the filing of any Claim;
 - (b) if a Municipality breaches, then the QESP may exercise and any all remedies at law or equity, including the filing of any Claim, subject, however, to the Municipality's governmental immunity privilege, as applicable; and
- 13. Notice of Breach. Any notice of breach under either the Material Breach or Other Breaches provisions may include an effective Contract Termination date if the breach is not cured by the stated date and, unless otherwise modified by the non-breaching party in writing prior to the Termination date, no further action shall be required of any party to effect the Termination as of the stated date. If the notice does not set forth an effective Contract Termination date, then the non-breaching party may Terminate the Contract after the cure period has lapsed by giving the breaching party no less than twenty four (24) hours' prior written notice.
- 14. Withholding of Payment. This Section shall not be interpreted to be a limitation on or adversely affect the rights of the Owner in "Events of Material Breach; Right to Cure" or the "Other Breaches; Right to Cure; Exercise of Remedies" Sections of this Contract. If QESP is in Material Breach or Other Breach of this Contract, then, the Owner may withhold payment in whole or in part that is due or will become due under any of the Exhibits pending resolution of the Material Breach or Other Breach issue. However, the Owner may do so only provided, that, the Owner notifies the Contractor in writing prior to the date that the payment would have been due and provided further that withholding payment does not create a default or breach under the documents comprising **Schedule I** of **Exhibit A**.

15. Waivers.

- (a) No waiver of any breach of the Contract shall be interpreted or deemed to be a waiver of any other or subsequent breach.
- (b) A party's failure to insist on strict performance of any provision of the Contract shall only be deemed to be a waiver of rights and remedies concerning that specific instance of Performance and shall not be deemed to be a waiver of any subsequent rights, remedies or breach.
- 16. <u>Remedies.</u> All remedies afforded in the Contract shall be taken and construed as cumulative, that is, in addition to every other remedy provided in the Contract or at law or in equity.
- 17. Purchase Orders.

- (a) The fully executed Contract itself is not an authorization for the Contractor to begin Performance in any way. The Contractor may begin Performance only upon issuance of a written notice to proceed issued by Owner, and only after it has received a duly issued purchase order against the Contract for Performance in accordance with the applicable Exhibits.
- (b) The Owner shall issue a purchase order against the Contract, and only in accordance with an applicable Exhibit, directly to the Contractor and to no other party. The Contractor may not commence Performance unless the purchase order and written notice to proceed are issued directly to the Contractor and to no other party.
- (c) A Contractor making delivery without a duly issued purchase order in accordance with this Section does so at the Contractor's own risk.
- (d) The Owner may, in its sole discretion, deliver to the Contractor any or all duly issued purchase orders via electronic means only, such that the Owner shall not have any additional obligation to deliver to the Contractor a "hard copy" of the purchase order or a copy bearing any hand-written signature or other "original" marking.

18. Indemnification.

- (a) The Contractor shall indemnify, defend and hold harmless the Owner and its officers, representatives, agents, servants, employees, successors and assigns from and against any and all (1) Claims arising, directly, or indirectly, in connection with the Contract and all applicable Exhibits, including the negligent Acts of the Contractor or Contractor Parties; and (2) liabilities, damages, losses, costs and expenses, including but not limited to, attorneys' and other professionals' fees, arising, directly or indirectly, in connection with Claims, Acts or the Contract. The Contractor shall use counsel reasonably acceptable to the Owner in carrying out its obligations under this Section. The Contractor's obligations under this Section to indemnify, defend and hold harmless against Claims includes Claims concerning confidentiality of any part of or all of the Contractor's bid, proposal or any Records, any intellectual property rights, other proprietary rights of any person or entity, copyrighted or uncopyrighted compositions, secret processes, patented or unpatented inventions, articles or appliances furnished or used in the Performance.
- (b) The Contractor shall not be responsible for indemnifying or holding the Owner harmless from any liability arising due to the negligence or intentional misconduct of the Owner or any other person or entity acting under direct control or supervision of the Owner.
- (c) The Contractor shall reimburse the Owner for any and all damages to the real or personal property of the Owner caused by the Acts of the Contractor or any Contractor Parties. The Owner shall give the Contractor reasonable notice of any such Claims.
- (d) The Contractor's duties under this Section shall remain fully in effect and binding in accordance with the terms and conditions of the Contract, without being lessened or compromised in any way, even where the Contractor is alleged or is found to have merely contributed in part to the Acts giving rise to the Claims and/or where the Owner is alleged or is found to have contributed to the Acts giving rise to the Claims
- (e) The Contractor shall carry and maintain at all times during the term of the Contract, and during the time that any provisions survive the term of the Contract, sufficient general

liability insurance to satisfy its obligations under this Contract. The Contractor shall name the Owner as an additional insured on the policy and shall provide a copy of the policy to the Owner prior to the effective date of the Contract. The Contractor shall not begin Performance until the delivery of the policy to the Owner. The Owner shall be entitled to recover under the insurance policy even if a body of competent jurisdiction determines that the Owner is contributorily negligent.

- (f) This Section shall survive the Termination of the Contract and shall not be limited by reason of any insurance coverage.
- 19. Forum and Choice of Law. The parties deem the Contract to have been made in the City of Waterbury, State of Connecticut. Both parties agree that it is fair and reasonable for the validity and construction of the Contract to be, and it shall be, governed by the laws and court decisions of the State of Connecticut, without giving effect to its principles of conflicts of laws. To the extent that any immunities provided by Federal law or the laws of the State of Connecticut do not bar an action against the Owner, and to the extent that these courts are courts of competent jurisdiction, for the purpose of venue, the complaint shall be made returnable to the Judicial District of Waterbury only or shall be brought in and shall not be transferred to any other court. The Contractor waives any objection which it may now have or will have to the laying of venue of any Claims in any forum and further irrevocably submits to such jurisdiction in any suit, action or proceeding.

20. Contractor Guaranties.

Contractor shall:

- (a) Perform fully under the Contract, including but not limited to Section 63 and any and all Exhibits hereto;
- (b) Guarantee the Work against defective material or workmanship and to repair any damage or marring occasioned in transit or, at the Owner's reasonable option, replace them;
- (c) Furnish adequate protection from damage for all work and to repair damage of any kind, for which its workers are responsible, to the premises, Equipment, the Contractor's work or that of Contractor Parties;
- (d) With respect to the provision of Services, pay for all permits, licenses and fees and give all required or appropriate notices; and
- (e) Adhere to all Contractual provisions ensuring the confidentiality of Records that the Contractor has access to and are exempt from disclosure under the State's Freedom of Information Act or other applicable law.
- 21. <u>Implied Warranties</u>. The implied warranty of fitness for a particular purpose and the warranty of merchantability are not disclaimed, excluded or modified for any of the Equipment.
- 22. Equipment, Standards, and Appurtenances. Any Equipment delivered must be standard new Equipment, latest model, except as otherwise specifically stated in the SOW. Remanufactured, refurbished or reconditioned equipment may be accepted but only to the extent allowed under the SOW. Where the SOW does not specifically list or describe any part or nominal appurtenances of equipment for the Equipment, it shall be understood that the Contractor shall deliver such parts and appurtenances as are usually provided with the manufacturer's stock model.

23. Delivery.

- (a) Delivery shall be made as ordered and in accordance with the provisions of the applicable Exhibits. Unless otherwise specified in the provisions of Exhibit A, delivery shall be to a loading dock or receiving platform. The Contractor or Contractor's shipping designee shall be responsible for removal of Equipment from the carrier and placement on the Owner loading dock or receiving platform. The receiving personnel of the Owner are not required to assist in this process. The decision of Owner as to reasonable compliance with delivery terms shall be final and binding. The burden of proof of proper receipt of the order shall rest with the Contractor.
- (b) In order for the time of delivery to be extended, the Owner must first approve a request for extension from the time specified in the Contract, such extension applying only to the particular item or shipment.
- (c) Equipment shall be securely and properly packed for shipment, according to accepted standard commercial practice, without extra charge for packing cases, baling or sacks. The containers shall remain the property of the Owner unless otherwise stated in QESP's proposal.
- (d) All risk of loss and damage to the Equipment transfers to the Owner upon Title vesting in the Owner.
- 24. Equipment Inspection. The Owner shall determine the manner and prescribe the inspection of all Equipment and the tests of all samples submitted to determine whether they comply with all of the specifications in the Contract. If any equipment fails in any way to meet the specifications in the Contract, the Owner may, in its sole discretion, either reject it and owe nothing or accept it and pay for it on an adjusted price basis, depending on the degree to which the Equipment meets the specifications. Any decision pertaining to any such failure or rejection shall be final and binding.
- 25. Setoff. In addition to all other remedies that the Owner may have, the Owner, in its sole discretion, may setoff any costs or expenses that the Owner incurs resulting from the Contractor's unexcused non-Performance under the Contract and under any other agreement or arrangement that the Contractor has with the Owner, and (2) any other amounts that are due or may become due from the Owner to the Contractor, against amounts otherwise due or that may become due to the Contractor under the Contract, or under any other agreement or arrangement that the Contractor has with the Owner. The Owner's right of setoff shall not be deemed to be the Owner's exclusive remedy for the Contractor's or Contractor Parties' breach of the Contract, all of which shall survive any setoffs by the Owner.
- 26. <u>Force Majeure.</u> The Owner and the Contractor shall not be excused from their obligation to Perform in accordance with the Contract except in the case of Force Majeure events and as otherwise provided for in the Contract. In the case of any such exception, the nonperforming party shall give immediate written notice to the other, explaining the cause and probable duration of any such nonperformance. Contractor shall be entitled to an extension of the time for Substantial and Final Completion in the case of an event of Force Majeure.
- 27. <u>Advertising.</u> The Contractor shall not refer to the City or any State Agency for advertising or promotional purposes, including, but not limited to, posting any material or data on the Internet, without Owner's prior written approval.

- 28. Americans With Disabilities Act. The Contractor shall be and remain in compliance with the Americans with Disabilities Act of 1990 ("ADA Act"), to the extent applicable, during the term of the Contract. Owner may Terminate the Contract if the Contractor fails to comply with the ADA Act.
- 29. Representations and Warranties. The **Exhibit A** may include additional representations and warranties that are in addition to, and do not modify or abrogate, the ones in this Representation and Warranties Section. The Contractor represents and warrants to Owner for itself and Contractor Parties, as appropriate, that:
 - (a) if they are entities, they are duly and validly existing under the laws of their respective states of organization and authorized to conduct business in the State of Connecticut in the manner contemplated by the Contract. Further, as appropriate, they have taken all necessary action to authorize the execution, delivery and Performance and the Contract and have the power and authority to execute, deliver and Perform their obligations under the Contract;
 - (b) they will comply with all applicable State and Federal laws and municipal ordinances in satisfying their obligations to the Owner under and pursuant to the Contract;
 - (c) the execution, delivery and Performance of the Contract will not violate, be in conflict with, result in a breach of or constitute (with or without due notice and/or lapse of time) a default under any of the following, as applicable: (1) any provision of law; (2) any order of any court or the State; or (3) any indenture, agreement, document or other instrument to which it is a party or by which it may be bound;
 - (d) they are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from entering into a contract with any governmental entity:
 - (e) as applicable, they have not, within the three years preceding the Contract, in any of their current or former jobs, been convicted of, or had a civil judgment rendered against them or against any person who would Perform under the Contract, for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a transaction or contract with any governmental entity. This includes, but is not limited to, violation of Federal or state antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;
 - (f) they are not presently indicted for or otherwise criminally or civilly charged by any governmental entity with commission of any of the offenses listed above;
 - (g) they have not within the three years preceding the Contract had one or more contracts with any governmental entity terminated;
 - (h) they have not employed or retained any entity or person, other than a bona fide employee working solely for them, to solicit or secure the Contract and that they have not paid or agreed to pay any entity or person, other than a bona fide employee working solely for them, any fee, commission, percentage, brokerage fee, gifts, or any other consideration contingent upon or resulting from the award or making of the Contract or any assignments made in accordance with the terms of the Contract;

- (i) to the best of their knowledge, there are no Claims involving the Contractor or Contractor Parties that might reasonably be expected to materially adversely affect their businesses, operations, assets, properties, financial stability, business prospects or ability to Perform fully under the Contract;
- (j) they shall disclose, to the best of their knowledge, to the Owner in writing any Claims involving them that might reasonably be expected to materially adversely affect their businesses, operations, assets, properties, financial stability, business prospects or ability to Perform fully under the Contract, no later than ten (10) Days after becoming aware or after they should have become aware of any such Claims. For purposes of the Contractor's obligation to disclose any Claims, the ten (10) Days in the Disclosure of Contractor Parties Litigation Section of this Contract shall run consecutively with the ten (10) Days provided for in this representation and warranty;
- (k) their participation in the Solicitation process is not a conflict of interest or a breach of ethics under the provisions of the Ethics and Conflict of Interest provisions set forth in Chapter 39 of the City of Waterbury Code of Ordinances.
- (1) the proposal in response to the Solicitation was not made in connection or concert with any other person, entity or proposer, including any affiliate (as the term "Affiliate" is defined in the Tangible Personal Property Section of this Contract) of the QESP, submitting a proposal for the same Work, and is in all respects fair and without collusion or fraud;
- (m) they are able to Perform under the Contract using their own resources;
- (n) the Contractor shall obtain in a written contract all of the representations and warranties in this Section from any Contractor Parties and to require that provision to be included in any contracts and purchase orders with Contractor Parties;
- (o) they have paid all applicable workers' compensation second injury fund assessments concerning all previous work done in Connecticut;
- (p) they have a record of compliance with Occupational Health and Safety Administration regulations without any unabated, willful or serious violations;
- (q) they owe no unemployment compensation contributions;
- (r) they are not delinquent in the payment of any taxes owed, or, that they have filed a sales tax security bond, and they have, if and as applicable, filed for motor carrier road tax stickers and have paid all outstanding road taxes;
- (s) all of their vehicles have current registrations and, unless such vehicles are permanently removed from service, they shall not allow any such registrations to lapse;
- (t) each Contractor Party has vested in the Contractor plenary authority to bind the Contractor Parties to the full extent necessary or appropriate to ensure full compliance with and Performance in accordance with all of the terms and conditions of the Contract and that all appropriate parties shall also provide to Owner, no later than fifteen (15) days after receiving a request from Owner, such information as Owner may require to evidence, in Owner's sole determination, compliance with this Section;

- (u) except to the extent set forth in **Exhibit A**, all Title shall pass to the Owner upon complete installation, testing and acceptance of the Work and payment by the Owner;
- (v) if either party Terminates the Contract, for any reason, they shall relinquish to the Owner all Title to the Equipment delivered, accepted and paid for (except to the extent any invoiced amount is disputed) by the Owner;
- (w) with regard to third party products provided with the Equipment, they shall transfer all licenses which they are permitted to transfer in accordance with the applicable third party license;
- (x) they shall not copyright, register, distribute or claim any rights in or to the Equipment after the effective date of the Contract without Owner's prior written consent;
- (y) they either own or have the authority to use all Title of and to the Equipment, and that such Title is not the subject of any encumbrances, liens or claims of ownership by any third party;
- (z) the Equipment does not infringe or misappropriate any patent, trade secret or other intellectual property right of a third party;
- (aa) the Owner's use of any Equipment shall not infringe or misappropriate any patent, trade secret or other intellectual property right of a third party;
- (bb) if they procure any Equipment, they shall sub-license such Equipment and that the Owner shall be afforded the full benefits of any manufacturer or subcontractor licenses for the use of the Equipment;
- (cc) they shall assign or otherwise transfer to the Owner, or afford the Owner the full benefits of any manufacturer's warranty for the Equipment, to the extent that such warranties are assignable or otherwise transferable to the Owner; and
- (dd) at all times during the term of the Contract, including especially the term of the SOW, QESP shall maintain employed staff who is licensed by the State of Connecticut as Professional Engineers in mechanical and electrical engineering.
- 30. Representations and Warranties Concerning Motor Vehicles. If in the course of Performance or in any other way related to the Contract the Contractor at any time uses or operates "motor vehicles," as that term is defined by Conn. Gen. Stat. §14-1(53) (including, but not limited to such services as snow plowing, sanding, hauling or delivery of materials, freight or merchandise, or the transportation of passengers), the Contractor, represents and warrants for itself and the Contractor Parties, as appropriate, that:
 - (a) It is the owner of record or lessee of record of each such motor vehicle used in the Performance of the Contract, and each such motor vehicle is duly registered with the Connecticut Owner of Motor Vehicles ("ConnDMV") in accordance with the provisions of Chapter 246 of the Connecticut General Statutes. Each such registration shall be in valid status, and shall not be expired, suspended or revoked by ConnDMV, for any reason or cause. If such motor vehicle is not registered with ConnDMV, then it shall be duly registered with another state or commonwealth in accordance with such other state's or commonwealth's applicable statutes. Each such registration shall be in valid status, and shall not be expired, suspended or revoked by such other state or commonwealth for any reason or cause.

- (b) Each such motor vehicle shall be fully insured in accordance with the provisions of Sections 14-12b, 14-112 and 38a-371 of the Connecticut General Statutes, as amended, in the amounts required by the said sections or in such higher amounts as have been specified by the Owner as a condition for the award of the Contract, or in accordance with all substantially similar provisions imposed by the law of the jurisdiction where the motor vehicle is registered.
- (c) Each Contractor Party who uses or operates a motor vehicle at any time in the Performance of the Contract shall have and maintain a motor vehicle operator's license or commercial driver's license of the appropriate class for the motor vehicle being used or operated. Each such license shall bear the endorsement or endorsements required by the provisions of Section 14-36a of the Connecticut General Statutes, as amended, to operate such motor vehicle, or required by substantially similar provisions imposed by the law of another jurisdiction in which the operator is licensed to operate such motor vehicle. The license shall be in valid status, and shall not be expired, suspended or revoked by ConnDMV or such other jurisdiction for any reason or cause.
- (d) Each motor vehicle shall be in full compliance with all of the terms and conditions of all provisions of the Connecticut General Statutes and regulations, or those of the jurisdiction where the motor vehicle is registered, pertaining to the mechanical condition, equipment, marking and operation of motor vehicles of such type, class and weight, including, but not limited to, requirements for motor vehicles having a gross vehicle weight rating of 18,000 pounds or more or motor vehicles otherwise described by the provisions of Conn. Gen. Stat. § 14-163c(a) and all applicable provisions of the Federal Motor Carrier Safety Regulations, as set forth in Title 49, Parts 382 to 399, inclusive, of the Code of Federal Regulations.
- 31. <u>Disclosure of Contractor Parties Litigation</u>. The Contractor shall require that all Contractor Parties, as appropriate, disclose to the Contractor, to the best of their knowledge, any Claims involving the Contractor Parties that might reasonably be expected to materially adversely affect their businesses, operations, assets, properties, financial stability, business prospects or ability to Perform fully under the Contract, no later than ten (10) Days after becoming aware or after they should have become aware of any such Claims. Disclosure shall be in writing.
- 32. Entirety of Contract. The Contract is the entire agreement between the parties with respect to its subject matter, and supersedes all prior agreements, proposals, offers, counteroffers and understandings of the parties, whether written or oral. The Contract has been entered into after full investigation, neither party relying upon any statement or representation by the other unless such statement or representation is specifically embodied in the Contract.

33. Exhibits.

All exhibits referred to herein and attached hereto this Contract are incorporated into this Contract and made a part hereof by such reference. Said Exhibits are:

Exhibit A: Energy-Savings Performance Project Statement of Work Including the following Schedules attached thereto:

Attachment 1: Schedules

Schedule A: Energy Savings Guarantee

Schedule B: Baseline Energy Consumption

Schedule C: Measurement & Verification Plan

Schedule D: Warranties
Schedule E: Not Used
Schedule F: Not Used
Schedule G: Not Used

Schedule H: Final Project Cost & Project Cash Flow Analysis

Schedule I: Payment Schedule

Schedule J: Compensation to QESP for Annual Services

Schedule K: Rebates, Incentives, and Grants

Schedule L: Not Used
Schedule M: Not Used
Schedule N: Not Used
Schedule O: Not Used
Schedule P: Not Used

Schedule Q: Description of Project Sites

Schedule R: Equipment to Be Installed by QESP
Schedule S: Construction and Installation Schedule
Schedule T: Systems Start-Up and Commissioning

Schedule U: Standards of Comfort

Schedule V: QESP's Training Responsibilities

Schedule W: Not Used
Schedule X: Not Used
Schedule Y: Not Used
Schedule X: Not Used
Schedule AA: Not Used

Schedule BB: QESP's Maintenance Responsibilities
Schedule CC: City's Maintenance Responsibilities
Schedule DD: Facility Maintenance Checklist

Schedule EE: Certificate of Final Acceptance of all ESMs/Final Completion
Schedule FF: Certificate of Substantial Completion of all ESMs/Substantial

Completion

Schedule GG: Notice of Substantial Completion of ESM

Schedule HH: Not Used Schedule II: Not Used

Exhibit B: Investment-Grade Energy Audit & Project Development Proposal

Including the following Appendices attached thereto:

Appendix 1: Calculations Appendix 2: 35% Drawings Appendix 3: Cutsheets Appendix 4: Audit Data

Some of said Exhibits, including Schedules and Appendices thereto, attached to this Contract are blank forms or templates. When said Exhibits, including Schedules and Appendices thereto, are completed, they too are deemed part of this Contract.

- 34. Executive Orders. This Contract is subject to the provisions of Executive Order No. Three of Governor Thomas J. Meskill, promulgated June 16, 1971, concerning labor employment practices, Executive Order No. Seventeen of Governor Thomas J. Meskill, promulgated February 15, 1973, concerning the listing of employment openings and Executive Order No. Sixteen of Governor John G. Rowland promulgated August 4, 1999, concerning violence in the workplace, all of which are incorporated into and are made a part of the Contract as if they had been fully set forth in it. The Contract may also be subject to Executive Order No. 7C of Governor M. Jodi Rell, promulgated July, 13, 2006, concerning contracting reforms and Executive Order No. 14 of Governor M. Jodi Rell, promulgated April 17, 2006, concerning procurement of cleaning products and services, in accordance with their respective terms and conditions. If Executive Orders 7C and 14 are applicable, they are deemed to be incorporated into and are made a part of the Contract as if they had been fully set forth in it. At the Contractor's request, the Owner shall provide a copy of these orders to the Contractor.
- 35. Not Used.
- 36. Not Used.
- 37. Whistleblowing. This Contract may be subject to the provisions of Section 4-61dd of the Connecticut General Statutes. In accordance with this statute, if an officer, employee or appointing authority of the Contractor takes or threatens to take any personnel action against any employee of the Contractor in retaliation for such employee's disclosure of information to any employee of the contracting state or quasi-public agency or the Auditors of Public Accounts or the Attorney General under the provisions of subsection (a) of such statute, the Contractor shall be liable for a civil penalty of not more than five thousand dollars for each offense, up to a maximum of twenty per cent of the value of this Contract. Each violation shall be a separate and distinct offense and in the case of a continuing violation, each calendar day's continuance of the violation shall be deemed to be a separate and distinct offense. The State may request that the Attorney General bring a civil action in the Superior Court for the Judicial District of Hartford to seek imposition and recovery of such civil penalty. In accordance with subsection (f) of such statute, each large state contractor, as defined in the statute, shall post a notice of the provisions of the statute relating to large state contractors in a conspicuous place which is readily available for viewing by the employees of the Contractor.
- 38. Notice. All notices, demands, requests, consents, approvals or other communications required or permitted to be given or which are given with respect to this Contract (for the purpose of this Section collectively called "Notices") shall be deemed to have been effected at such time as the notice is placed in the U.S. mail, first class and postage pre-paid, return receipt requested or placed with a recognized, overnight express delivery service that provides for a return receipt.

39. Insurance.

- (a) The Contractor shall not commence work under this Contract until all insurance required under this Section 39 has been obtained by the Contractor and such insurance has been approved by the City. The Contractor shall not allow any subcontractor to commence work on any subcontract until all insurance required of any such subcontractor has been so obtained and approved by the City. Insurance shall be provided by insurers, satisfactory to the City and authorized to do business in the State of Connecticut, an "A-" Best's Rating and at least a Class V3 or better financial size category as shown in the most current A.M. Best Company ratings.
- (b) At no additional cost to the City, the Contractor shall purchase and maintain the insurance coverages set forth below which shall protect the City from claims which may arise out of or result from the Contractor's obligation under this Contract, whether such obligations are the Contractor's or subcontractor or person or entity directly or indirectly employed by said Contractor or subcontractor, or by any person or entity for whose acts said Contractor or subcontractor may be liable.
- (c) Each insurance policy shall state that the insurance company shall agree to investigate and defend the insured against all claims for damages, even if groundless. If any insurance required herein is to be issued or renewed on a claims made form as opposed to an occurrence form, the retroactive date for coverage shall be no later than the commencement date of this Contract and shall provide that in the event of cancellation or non-renewal, the discovery period for insurance claims ("Tail Coverage") shall be available for at least 36 months.
- (d) The following policies with stated limits shall be maintained, in full force and effect, at all times during which the services are to be performed by the Contractor:
- (e) General Liability Insurance: \$1,000,000.00 per Occurrence, \$2,000,000.00 General Aggregate and \$2,000,000.00 Products and Completed Operations Aggregate Providing coverage to protect the City for all damages arising out of bodily injuries, sickness to or death of all persons in any one accident or occurrence and for all damages arising out of destruction of property in any one accident or occurrence.
- (f) Automobile Liability Insurance: \$1,000,000.00 Combined Single Limit each accident (CSL)

Providing coverage to protect the City with respect to claims for damage for bodily injury and or property damage arising out of ownership, maintenance, operation, use or loading and unloading of any auto including hired & non-owned autos.

(g) Workers' Compensation: Statutory Limits within the State of Connecticut: Employers' Liability:

EL Each Accident \$500,000.00

EL Disease Each Employee \$500,000.00

EL Disease Policy Limit \$500,000.00

Contractor shall comply with all State of Connecticut statutes as it relates to workers' compensation.

- (h) Excess/Umbrella Liability Insurance: Excess or Umbrella insurance coverage that follows form or sits over General Liability, Automobile Liability and Workers Compensation insurances. \$5,000,000.00 each Occurrence and \$5,000,000.00 Aggregate.
- (i) Builder's Risk Insurance: coverage equaling \$27,415,059.00, the monetary value of the construction component of the Project.

"All Risk" Builders Risk insurance (also known as "course of construction") coverage with limits equal to or better than the maximum possible loss of all materials of construction used or contemplated under this Contract, including all materials in transit and all materials in storage wherever stored and the value of any and all subsequent Contract changes. This insurance shall include the interests of the City, the Contractor and any and all subcontractors. If deemed necessary by the City's Risk Manager, this insurance shall also include coverage for the total value of the Project's constructed property and shall be valid until a certificate of occupancy is issued. Upon the issuance of said certificate, the City will assume responsibility for insuring said property.

(j) Contractors Pollution Liability Insurance: \$1,000,000.00 each Claim, \$2,000,000.00 Aggregate

Policy shall contain no exclusion for hazardous materials, including Lead and Asbestos. Pollution Liability Insurance shall be in the amounts stated and shall be provided by NORESCO's hazardous materials abatement subcontractor(s). Such insurance shall name the City and NORESCO as additional insureds. NORESCO shall provide the City evidence of the requisite insurance prior to commencing any hazardous abatement work on the project.

- (k) Failure to Maintain Insurance: In the event the Contractor fails to maintain the minimum required coverage as set forth herein, the City may at its option purchase same, and offset the Contractor's invoices for the cost of said insurance.
- (1) Cancellation: The City of Waterbury shall receive written notice of cancellation from the Contractor at least thirty (30) calendar days prior to the date of actual cancellation, regardless of the reason for such cancellation.
- (m) Certificates of Insurance: All of Contractor's above required policies, except Workers
 Compensation and Professional Liability, shall be endorsed to add the City as an Additional
 Insured on a primary and non-contributory basis. All policies shall include a Waiver of
 Subrogation and be written on an Occurrence basis, with the exception of Professional Liability
 insurance that shall be on a claims made basis. The insurance afforded the additional insured shall
 be primary and non-contributory insurance and the coverage and limits provided under the

Contractor's policies shall not be reduced or prorated by the existence of any other insurance applicable to any loss the additional insured may have suffered. Prior to the execution of this Contract by the City, the Contractor shall furnish to the City, subject to City approval, certificate(s) of insurance and Additional Insured Endorsement and Waiver of Subrogation Endorsement verifying the above coverages, including the naming of the City of Waterbury, as follows: "The City of Waterbury is listed as Additional Insured on all lines of coverage except Workers Compensation and Professional Liability and all policies include a Waiver of Subrogation and are written on an Occurrence basis". The City's Invitation to Bid Number must be shown on the certificate of insurance to assure correct filing. The Contractor must supply replacement/renewal certificates at least 30 days prior to the expiration of the policy(ies).

- (n) No later than thirty (30) calendar days after Contractor receipt, the Contractor shall deliver to the City a copy of the Contractor's certificates of insurance and required endorsements.
- 40. <u>Headings.</u> The headings given to the sections in the Contract are inserted only for convenience and are in no way to be construed as part of the Contract or as a limitation of the scope of the particular section to which the heading refers.
- 41. <u>Number and Gender.</u> Whenever the context so requires, the plural or singular shall include each other and the use of any gender shall include all genders.
- 42. <u>Parties.</u> To the extent that any Contractor Party is to participate or Perform in any way any projects under the Contract, any reference in the Solicitation or the Contract to "Contractor" shall also be deemed to include "Contractor Parties" as if such reference had originally specifically included "Contractor Parties" since it is the parties' intent for the term "Contractor Parties" to be vested with the same respective rights and obligations as the term "Contractor."
- 43. <u>Contractor Changes.</u> The Contractor shall notify the Owner in writing no later than ten (10) Days from the effective date of any change in:
 - a) its certificate of incorporation or other organizational document:
 - b) more than a controlling interest in the ownership of the Contractor; or
 - c) the individual(s) in charge of the Performance.

This change shall not relieve the Contractor of any responsibility for the accuracy and completeness of the Performance. The Owner, after receiving written notice by the Contractor of any such change, may require such agreements, releases and other instruments evidencing, to their satisfaction, that any individuals retiring or otherwise separating from the Contractor have been compensated in full or that provision has been made for compensation in full, for all work performed under terms of the Contract. The Contractor shall deliver such documents to the Owner in accordance with the terms of the Owner's written request. The Owner may also require, and the Contractor shall deliver, a financial statement showing that solvency of the Contractor is being maintained. The death of any Contractor Party, as applicable, shall not release the Contractor from the obligation to Perform under the Contract; the surviving Contractor Parties, as appropriate, must continue to Perform under the Contract until Performance is fully completed.

- 44. <u>Further Assurances.</u> The parties shall provide such information, execute and deliver any instruments and documents and take such other actions as may be necessary or reasonably requested by the other party which are not inconsistent with the provisions of this Contract and which do not involve the vesting of rights or assumption of obligations other than those provided for in the Contract, in order to give full effect to the Contract and to carry out the intent of the Contract.
- 45. Audit and Inspection of Plants, Places of Business, and Records.
 - (a) The Owner and its agents may, at reasonable hours, inspect and examine all of the parts of the Contractor's and Contractor Parties' plants and places of business which, in any way, are related to, or involved in, the performance of this Contract.
 - (b) The Contractor shall maintain, and shall require each of the Contractor Parties to maintain, accurate and complete Records. The Contractor shall make all of its and the Contractor Parties' Records available at all reasonable hours for audit and inspection by the Owner and its agents.
 - (c) The Owner shall make all requests for any audit or inspection in writing and shall provide the Contractor with at least seventy-two (72) hours' notice prior to the requested audit and inspection date. If the Owner suspects fraud or other abuse, or in the event of an emergency, the Owner is not obligated to provide any prior notice.
 - (d) All audits and inspections shall be at the Contractor's expense.
 - (e) The Contractor shall keep and preserve or cause to be kept and preserved all of its and Contractor Parties' Records until three (3) years after the latter of (i) final payment under this Contract, or (ii) the earlier termination of this Contract, as the same may be modified for any reason. The Owner may, request an audit or inspection at any time during this period. If any Claim or audit is started before the expiration of this period, the Contractor shall retain or cause to be retained all Records until all Claims or audit findings have been resolved.
 - (f) The Contractor shall cooperate fully with the Owner and its agents in connection with an audit or inspection. Following any audit or inspection, the Owner may conduct and the Contractor shall cooperate with an exit conference.
 - (g) The Contractor shall incorporate this entire Section verbatim into any contract or other agreement that it enters into with any Contractor Party.
- 46. <u>Background Checks.</u> The Owner may require that the Contractor and Contractor Parties undergo criminal background checks as provided for in the State of Connecticut Owner of Emergency Services and Public Protection Administration and Operations Manual or such other City or State document as governs procedures for background checks. The Contractor and Contractor Parties shall cooperate fully as necessary or reasonably requested with the Owner and its agents in connection with such background checks.
- 47. <u>Continued Performance.</u> The Contractor and Contractor Parties shall continue to perform their obligations under the Contract while any dispute concerning the Contract is being resolved.
- 48. <u>Working and Labor Synergies.</u> The Contractor shall be responsible for maintaining a tranquil working relationship between and among the Contractor work force, the Contractor Parties and their work force, Owner employees, and any other parties present at the work site. The Contractor shall quickly

resolve all labor disputes which result from the Contractor's or Contractor Parties' presence at the work site, or other action under their control. Labor disputes, except to the extent they constitute a Force Majeure, shall not be deemed to be sufficient cause to allow the Contractor to make any claim for additional compensation for cost, expenses or any other loss or damage, nor shall those disputes be deemed to be sufficient reason to relieve the Contractor from any of its obligations under the Contract.

49. <u>Contractor Responsibility.</u>

- (a) The Contractor shall be responsible for the entire Performance under the Contract regardless of whether the Contractor itself performs. The Contractor shall be the sole point of contact concerning the management of the Contract, including Performance and payment issues. The Contractor is solely and completely responsible for adherence by the Contractor Parties to all applicable provisions of the Contract. Notwithstanding any provisions in the Contract, the Exhibits or any subcontract, nothing shall be interpreted as establishing privity of contract between the Owner and any subcontractor.
- (b) The Contractor shall exercise all reasonable care to avoid damage to the Owner's property or to property being made ready for the Owner's use, and to all property adjacent to any work site. The Contractor shall promptly report any damage, regardless of cause, to the Owner.
- 50. <u>Severability.</u> If any term or provision of the Contract or its application to any person, entity or circumstance shall, to any extent, be held to be invalid or unenforceable, the remainder of the Contract or the application of such term or provision shall not be affected as to persons, entities or circumstances other than those as to whom or to which it is held to be invalid or unenforceable. Each remaining term and provision of the Contract shall be valid and enforced to the fullest extent possible by law.
- 51. Confidentiality of Contractor Information. The Owner will afford due regard to the Contractor's request for the protection of proprietary or confidential information which the Owner receives. However, all materials associated with any Contractor submittal to a Owner or the Contract are subject to the terms of the Connecticut Freedom of Information Act ("FOIA") and all corresponding rules, regulations and interpretations. In making such a request for protection, the Contractor may not merely state generally that the materials are proprietary or confidential in nature and not, therefore, subject to release to third parties. Those particular sentences, paragraphs, pages or sections that the Contractor believes are exempt from disclosure under the FOIA must be specifically identified as such. Convincing explanation and rationale sufficient to justify each exemption consistent with the FOIA must accompany the request. The rationale and explanation must be stated in terms of the prospective harm to the competitive position of the Contractor that would result if the identified material were to be released and the reasons why the materials are legally exempt from release pursuant to the FOIA. To the extent that any other provision or part of the Contract, especially including the Exhibits, and the Records, conflicts or is in any way inconsistent with this Section, this Section controls and shall apply and the conflicting provision or part shall not be given effect. If the Contractor indicates that certain documentation is submitted in confidence, by specifically and clearly marking said documentation as CONFIDENTIAL, the Owner will endeavor to keep said information confidential to the extent permitted by law. The Owner, however, has no obligation to initiate, prosecute or defend any legal proceeding or to seek a protective order or other similar relief to prevent disclosure of any information that is sought pursuant to a FOIA request. The Contractor shall have the burden of establishing the availability of any FOIA exemption in any proceeding where it is an issue. In no event shall a Owner have any liability for, the disclosure of any documents or information in its possession which the Owner believes are required to be disclosed pursuant to the FOIA or other requirements of law.

52. <u>Interpretation.</u> The Contract contains numerous references to statutes, ordinances and regulations. For all purposes, the content of those statutes and regulations shall govern over the content of the reference in the Contract to those statutes and regulations.

53. Cross-Default.

- (a) If the Contractor or Contractor Parties breach, default or in any way fail to Perform satisfactorily under the Contract, then Owner may, in its sole discretion, without more and without any action whatsoever required of an Owner, treat any such event as a breach, default or failure to Perform under any or all other agreements or arrangements ("Other Agreements") that the Contractor and Contractor Parties may have with the Owner. Accordingly, Owner may then exercise at its sole option any and all of its rights or remedies provided for in the Contract or Other Agreements, either selectively or collectively and without such election being deemed to prejudice any rights or remedies of Owner, as if the Contractor or Contractor Parties had suffered a breach, default or failure to Perform under the Other Agreements.
- (b) If the Contractor or Contractor Parties breach, default or in any way fail to Perform satisfactorily under any or all Other Agreements, then Owner may, in its sole discretion, without more and without any other action whatsoever being required, treat any such event as a breach, default or failure to Perform under the Contract. Accordingly, Owner may then exercise at its sole option any and all of rights or remedies provided for in the Other Agreements or the Contract, either selectively or collectively and without such election being deemed to prejudice any rights or remedies of an Owner or the State, as if the Contractor or Contractor Parties had suffered a breach, default or failure to Perform under the Contract.
- Disclosure of Records. This Contract may be subject to the provisions of section 1-218 of the Connecticut General Statutes. In accordance with this statute, each contract in excess of two million five hundred thousand dollars between a public agency and a person for the performance of a governmental function shall (a) provide that the public agency is entitled to receive a copy of records and files related to the performance of the governmental function, and (b) indicate that such records and files are subject to FOIA and may be disclosed by the public agency pursuant to FOIA. No request to inspect or copy such records or files shall be valid unless the request is made to the public agency in accordance with FOIA. Any complaint by a person who is denied the right to inspect or copy such records or files shall be brought to the Freedom of Information Commission in accordance with the provisions of sections 1-20 and -206 of the Connecticut General Statutes.
- 55. <u>City Ethics Laws.</u> Chapter 39: Ethics and Conflicts of Interest of the City of Waterbury Code of Ordinances is incorporated by reference into and made a part of the Contract as if the ordinance had been fully set forth in the Contract.
- Sovereign Immunity. The parties acknowledge and agree that nothing in the Solicitation or the Contract shall be construed as a modification, compromise or waiver by the State or City of any rights or defenses of any immunities provided by Federal law or the laws of the State of Connecticut to the Owner or any of its officers and employees, which they may have had, now have or will have with respect to all matters arising out of the Contract. To the extent that this Section conflicts with any other Section, this Section shall govern.
- 57. <u>Time of the Essence.</u> Time is of the essence with respect to all provisions of this Contract that specify a time for Performance; provided, however, that this provision shall not be construed to limit or deprive a party of the benefits of any grace or use period allowed in this Contract. See also paragraph 2.

58, <u>Prevailing Wages.</u> Some or all of the Performance in the **Exhibit A** may be subject to prevailing wages. Accordingly, the following provision is included in this Contract in accordance with the requirements of Conn. Gen. Stat. Sec. 31-53(a):

The wages paid on an hourly basis to any person performing the work of any mechanic, laborer or worker on the work herein contracted to be done and the amount of payment or contribution paid or payable on behalf of each such person to any; employee welfare fund, as defined in subsection (i) of this section, shall be at a rate equal to the rate customary or prevailing for the same work in the same trade or occupation in the town in which such public works project is being constructed. Any contractor who is not obligated by agreement to make payment or contribution on behalf of such persons to any such employee welfare fund shall pay to each mechanic, laborer or worker as part of such person's wages the amount of payment or contribution for such person's classification on each pay day.

Without modifying the foregoing, or affecting QESP's obligation to pay prevailing wages, if QESP is unable to secure the prevailing wage rates from the Connecticut Owner of Labor, then the Owner shall do and perform all that is necessary to do the same and forward the rates to the OESP.

- 59. Not Used.
- 60. Not Used.
- 61. Not Used.
- 62. Governmental Enactments. All references in this Contract to any ordinance, statute, public act, regulation, code or executive order shall mean such ordinance, statute, public act, regulation, code or executive order, respectively, as it has been amended, replaced or superseded at any time through substantial completion of all ESMs. Notwithstanding any language in this Contract that relates to such ordinance, statute, public act, regulation, code or executive order, and notwithstanding a lack of a formal amendment to this Contract, this Contract shall always, through substantial completion of all ESMs, be read and interpreted as if it contained the most current and applicable wording and requirements of such ordinance, statute, public act, regulation, code or executive order as if their most current language had been used in and requirements incorporated into this Contract at the time of its execution.

In the event a change in any City ordinance (or other local law of the City, other than a local change to comply with a federal or state law or regulation) increases NORESCO's cost or time for performance NORESCO shall be entitled to an equitable adjustment to its Compensation or time for completion or both.

63. Required City of Waterbury Provisions.

- (a) **Permits, Laws, Taxes and Regulations.** Permits and licenses necessary for the delivery and completion of the Contractor's work and services shall be secured in advance and paid for by the Contractor. The Contractor shall give all notices and comply with all laws, ordinances, rules and regulations bearing on the conduct of the Work and Services as specified.
- (b) **Working Hours.** To the extent the Contractor is required to be on City property to render its Services hereunder, the Contractor shall coordinate its schedule so that Work on the Premises is performed during those hours the City sets forth in a written notice to the Contractor, unless

written permission is obtained from the City to work during other times. This condition shall not excuse Contractor from timely performance under the Contract. The work schedule must be agreed upon by the City and the Contractor.

- (c) Contractor Staff. For the duration of this Contract, Mark Tantillo, shall be Contractor's on-site Project Manager for this Contract. If there is a need to replace said Project Manager, Contractor shall give the City thirty (30) calendar days prior written notice, a temporary replacement shall be immediately provided by Contractor, and a permanent replacement shall be retained in a time period acceptable to the City and subject to the City's prior written approval.
- (d) **Energy Savings Guarantee.** Contractor shall, subject to the following sentence, guarantee to the City annual unit energy savings for the Guarantee Term as follows:

	Continued Guer	iiidan kalissiesi, ka	Signamear
	A A	rigi Armai	
liriaiEvenu	Factor Fa	ere Electric N	
		urne Savitas	
	. Devige dev		
i clais	4,164	6,770	

The Energy Savings Guarantee is further detailed in Exhibit A (SOW), Schedule A (Energy Savings Guarantee), and the savings will be measured and verified in accordance with Exhibit A, Schedules B and C.

- (e) **Compensation.** The City shall compensate the Contractor for satisfactory provision of all of the Work and Services set forth in this Contract as follows:
 - (i) No claims for additional compensation will be considered for conditions made known to the Contractor prior to bidding. No claims for additional compensation will be considered on account of failure of the Contractor to completely inform itself as required herein above.
 - (ii) Fee Schedule. Subject to retainage, limitations, etc. set forth below in this Section 63, the fee payable to the Contractor shall not exceed TWENTY-NINE MILLION ONE HUNDRED THIRTY-THREE THOUSAND AND SEVEN HUNDRED FORTY-ONE DOLLARS AND ZERO CENTS (\$29,133,741.00) which is comprised of the following:

SOW Sum = \$27,415,059.00 plus

Total QESP Annual Services Fee = \$1,218,682.00

Owner's Controlled Contingency = \$500,000.00 (which shall be used at the sole discretion of the City and only upon delivery to Contractor of a

written City authorization detailing the scope, necessity, and cost of the expenditures for which the contingency may be used)

All as further detailed in Exhibit A, Schedules I & J.

(iii) Retainage. At the City's sole discretion, it hereby reserves the right to withhold as retainage five (5 %) percent of any payment (or monetary sum otherwise required by

- law) owed to the Contractor to be withheld from payments to the Contractor otherwise payable to the Contractor until such time as the Contractor's work and services to be provided under this Contact are fully completed and accepted in writing by the City. The retainage does not does not include additional sums that the City may withhold due to the Contractor's failure to comply with provisions of this Contract.
- (iv) Limitation of Payment. Compensation payable to the Contractor is limited to those fees set forth in this Section 63. Such compensation shall be paid by the City upon review and approval of the Contractor's invoices for payment and review of the work, services, deliverables, etc. required in this agreement and review as may be further required by the Charter and Ordinances of the City. Contractor's invoices shall describe the work, services, reports, plans, specifications, drawings, deliverables, etc. rendered and the compensation sought therefore in a form, and with detail and clarity, acceptable to the City.
- (v) The Contractor and its affiliates are hereby provided with notice that the City reserves the right, in the City's sole discretion, to offset, withhold, or otherwise reduce City payment(s) to the Contractor, in an amount equaling the sum or sums of money the Contractor and/or its affiliates is/are, or become delinquent or in arrears on, regarding the Contractor's and/or its affiliates real and personal property taxes and other payment obligations to the City.
- (vi) In the event of a delay caused by the City that increases the cost of the Work the parties shall negotiate an equitable adjustment in the Contractor's compensation, which shall require a duly authorized written and executed Amendment to this Contract.
- (f). **Review of Work.** The Contractor shall permit the City to review, at any time, all work performed under the terms of this agreement at any stage of the work. The Contractor shall maintain or cause to be maintained all records, books or other documents relative to charges, costs, expenses, fees, alleged breaches of the agreement, settlement of claims or any other matter pertaining to the Contractor's demand for payment. The City shall not certify fees for payment to the Contractor until the City has determined that the Contractor has completed the work in accordance with the requirements of this agreement.
- (g). **Qualifications Costs.** All costs of the Contractor in preparing its response for RFP No. 5167 shall be solely borne by the Contractor and are not included in the compensation to be paid by the City to the Contractor under this agreement or any other agreement.
- (h). Payment for Services, Materials, Employees. The Contractor shall be fully and solely responsible for the suitability, and compliance with the agreement, of all labor, services, equipment, materials, reports, plans, specifications, drawings, deliverables, incidentals, etc. furnished to the City under this agreement. The Contractor shall promptly pay all employees as their pay falls due, shall pay promptly as they fall due all bills for labor, services, equipment, materials, reports, plans, specifications, drawings, deliverables, incidentals, etc. going into the work, and all bills for insurance, bonds, Worker's Compensation coverage, Federal and State Unemployment Compensation, and Social Security charges applicable to this project. Before final payment is made, the Contractor shall furnish a legal statement to the City that all payments required under this subparagraph have been made.

(i). Liens. Neither the final payment nor any part of the retained percentage, if any, shall become due until the Contractor, if requested by the City, shall deliver to the City a complete release of all liens arising out of this agreement, or receipts in full in lieu thereof, and, if required, in either case, an affidavit that so far as the Contractor has knowledge or information, the releases and receipts include all the labor and material for which a lien could be filed; but the Contractor may, if any subcontractor refuses to furnish a release or receipt in full, furnish a bond satisfactory to the City, to indemnify it against any lien. If any lien remains unsatisfied after all payments are made, the Contractor shall refund to the City all moneys that the City may be compelled to pay in discharging such a lien, including all costs and a reasonable attorney's fee.

(j). 13.3. Affirmative Action.

13.3.1. Pursuant to CONN. GEN. STAT. § 4a-60, as amended by June 2015 Special Session Public Act 15-5:

- (a) Every contract to which an awarding agency is a party, every quasi-public agency project contract and every municipal public works contract shall contain the following provisions:
 - (1) The contractor agrees and warrants that in the performance of the contract such contractor will not discriminate or permit discrimination against any person or group of persons on the grounds of race, color, religious creed, age, marital status, national origin, ancestry, sex, gender identity or expression, intellectual disability, mental disability or physical disability, including, but not limited to, blindness, unless it is shown by such contractor that such disability prevents performance of the work involved, in any manner prohibited by the laws of the United States or of the state of Connecticut; and the contractor further agrees to take affirmative action to insure that applicants with jobrelated qualifications are employed and that employees are treated when employed without regard to their race, color, religious creed, age, marital status, national origin, ancestry, sex, gender identity or expression, intellectual disability, mental disability or physical disability, including, but not limited to, blindness, unless it is shown by such contractor that such disability prevents performance of the work involved;
 - (2) The contractor agrees, in all solicitations or advertisements for employees placed by or on behalf of the contractor, to state that it is an "affirmative action-equal opportunity employer" in accordance with regulations adopted by the Commission on Human Rights and Opportunities;
 - (3) The contractor agrees to provide each labor union or representative of workers with which such contractor has a collective bargaining agreement or other contract or understanding and each vendor with which such contractor has a contract or understanding, a notice to be provided by the Commission on Human Rights and Opportunities advising the labor union or workers' representative of the contractor's commitments under this section, and to post copies of the notice in conspicuous places available to employees and applicants for employment;
 - (4) The contractor agrees to comply with each provision of this section and sections 46a-68e and 46a-68f and with each regulation or relevant order issued by said commission pursuant to sections 46a-56, as amended by this act, 46a-68e, 46a-68f and 46a-86; and

- (5) The contractor agrees to provide the Commission on Human Rights and Opportunities with such information requested by the commission, and permit access to pertinent books, records and accounts, concerning the employment practices and procedures of the contractor as relate to the provisions of this section and section 46a-56, as amended by this act.
- (b) If the contract is a public works contract, municipal public works contract or contract for a quasi-public agency project, the contractor agrees and warrants that he or she will make good faith efforts to employ minority business enterprises as subcontractors and suppliers of materials on such public works or quasi-public agency project.

13.3.2. Pursuant to CONN. GEN. STAT. § 4a-60a, as amended by June 2015 Special Session Public Act 15-5:

- (a) Every contract to which an awarding agency is a party, every contract for a quasipublic agency project and every municipal public works contract shall contain the following provisions:
 - (1) The contractor agrees and warrants that in the performance of the contract such contractor will not discriminate or permit discrimination against any person or group of persons on the grounds of sexual orientation, in any manner prohibited by the laws of the United States or of the state of Connecticut, and that employees are treated when employed without regard to their sexual orientation;
 - (2) The contractor agrees to provide each labor union or representative of workers with which such contractor has a collective bargaining agreement or other contract or understanding and each vendor with which such contractor has a contract or understanding, a notice to be provided by the Commission on Human Rights and Opportunities advising the labor union or workers' representative of the contractor's commitments under this section, and to post copies of the notice in conspicuous places available to employees and applicants for employment:
 - (3) The contractor agrees to comply with each provision of this section and with each regulation or relevant order issued by said commission pursuant to section 46a-56; and
 - (4) The contractor agrees to provide the Commission on Human Rights and Opportunities with such information requested by the commission, and permit access to pertinent books, records and accounts, concerning the employment practices and procedures of the contractor which relate to the provisions of this section and section 46a-56.

(k) 14.1. Conformance With An Ordinance Concerning The Hiring Of Waterbury Residents On Certain Publicly-Funded Construction Projects.

14.1.1 The Contractors and its Subcontractors shall comply with the specific requirements of "An Ordinance Concerning the Hiring of Waterbury Residents on Certain Publicly-Funded Construction Projects" (the "Good Jobs Ordinance"), as may be amended from time to time and as set forth in Chapter 34 of the Code of Ordinances of the City. While the principal provisions of the ordinance are summarized as set forth in

paragraphs C-H below, the Contractor does hereby acknowledge that it has reviewed a copy of the Good Jobs Ordinance and that it has read the Ordinance and that Contractor is familiar with the obligations imposed on the Contractor and each Subcontractor by the Good Jobs Ordinance.

- **14.1.2** Failure of the Contractor or its Subcontractors to comply with the Good Jobs Ordinance shall be a material breach of this Agreement.
- **14.1.3** This paragraph shall apply to a Covered Project, as that term is defined in the Good Jobs Ordinance, in the City with a value of \$500,000.00 or greater and only to the extent permitted by federal and state law.
- **14.1.4 Definitions.** For purposes of this paragraph:
 - i. "Administrator" shall be defined as it is in the Good Jobs Ordinance.
 - ii. "Apprentice" shall be defined as it is in the Good Jobs Ordinance.
 - **iii.** "Basic Skilled Worker" shall be defined as it is in the Good Jobs Ordinance.
 - iv. "Contractor" shall be defined as it is in the Good Jobs Ordinance.
 - v. "Covered Project" shall be defined as it is in the Good Jobs Ordinance.
 - vi. "Hiring Goal" shall be defined as it is in the Good Jobs Ordinance.
 - vii. "Resident" shall be defined as it is in the Good Jobs Ordinance.
 - **viii.** "Subcontractor" shall be defined as it is in the Good Jobs Ordinance and shall include the Contractor's direct subcontractor providing construction work and all lower tiered (level) providers of construction work.
- **14.1.5 Hiring Goals.** If this Agreement requires the Contractor to perform work on a Covered Project, the Contractor and each Subcontractor shall have as its hiring goals:
 - i. at least thirty percent (30%) of its total worker hours performed by City Residents, and
 - **ii.** at least twenty-five percent (25%) of construction trade jobs shall go to Apprentices and/or Basic Skilled Workers, and
 - iii. at least seventy percent (70%) of all "new hires" (as that term is defined in the Good Jobs Ordinance) shall be "economically disadvantaged" individuals (as that term is defined in the Good Jobs Ordinance), and
 - iv. a minimum of five percent (5%) of the construction workforce labor hours will be local resident, minority artisans, and
 - v. a minimum of five percent (5%) of the construction workforce labor hours will be women, and

- vi. a minimum of ten percent (10%) of the total work hours shall be allocated for minorities, or
- vii. as may otherwise be required by any superseding Federal or State employment discrimination prohibition laws.
- **14.1.6** Good Faith Efforts. The Contractor and each Subcontractor shall engage in Good Faith Efforts to comply with the Hiring Goals. For the purposes of this paragraph, the term "Good Faith Efforts" shall have the same meaning as it does in the Good Jobs Ordinance.

The Contractor and each Subcontractor shall individually implement Good Faith efforts to satisfy the Hiring Goals.

- 14.1.7 Action Plan and Pre-Construction Meeting. Not later than fourteen (14) business days prior to the scheduled commencement date for construction, the Contractor shall submit a written plan-of-action to the City and to the Administrator of the Good Jobs Ordinance defining how the Contractor, and each Subcontractor, shall implement Good Faith Efforts to fulfill the Hiring Goals. Each plan-of-action shall include the anticipated number of job positions required for the Work. Not later than five (5) business day prior to the commencement date of construction, the Contractor must attend a mandatory "pre-construction" meeting with the City to review all plans-of-action and other relevant materials. No construction work shall proceed absent this pre-construction meeting.
- **14.1.8** Other Contractor Obligations. In addition to the foregoing, the Contractor shall ensure that all Subcontractor contracts and agreements expressly set forth and state as binding obligations therein, subject to appropriate party name change, the above Hiring Goals and Good Faith Efforts. The Contractor shall be accountable for, and liable to the City for, Contractor and each Subcontractor compliance with Hiring Goals and Good Faith efforts.
 - i. The Contractor shall meet with the Administrator no less than four (4) weeks prior to the commencement of construction on a Covered Project and provide the Administrator with the number of job positions to be created by the project by trade and the qualifications by job tile.
 - ii. The Contractor shall be required to produce Contractor and Subcontractor documentation that may be required under the provisions of the Good Jobs Ordinance or that the City or the Administrator reasonably believes will assist the City or the Administrator with their evaluation of Hiring Goals and Good Faith Efforts.
 - **iii.** The Contractor shall deliver weekly certified payroll records to the City within five (5) working days of the end of each payroll period. Moreover, the Contractor shall require each Subcontractor to create weekly certified payroll records.
 - iv. The Contractor's and each Subcontractor's payroll records shall include the person-hours, the residential address, race, gender, hiring date, and apprentice

(job) classification of all personnel employed under this Agreement and all Contracts and Sub-Contracts thereunder. The Contractor and each Subcontractor shall mark their respective final payroll period records as being final and be signed by an authorized officer or employee.

14.2 Liquidated Damages Applicable To Section 14.1

- **14.2.1** If the City finds that the Contractor, or a Subcontractor, has failed to achieve Hiring Goals during any five (5) day work period (Monday through Friday), the City shall:
 - i. issue a written notice to the Contractor specifying the matters constituting such failure and the time period within which Good Faith Efforts documentation must be delivered to the City for its evaluation.
 - **ii.** if the Good Faith documentation is not provided or, if provided, it fails to demonstrate compliance with Good Faith Efforts, the Contractor shall, for each failure by the Contractor or a Subcontractor to achieve the Hiring Goals during a full five day work period, pay to the City one thousand dollars (\$1,000.00) as liquidated damages.
- **14.2.2** If the City finds that the Contractor, or a Subcontractor, has failed to deliver weekly certified payroll records to the City within five (5) working days of the end of each payroll period the Contractor shall, as liquidated damages pay one hundred dollars (\$100.00) to the City for each week of ongoing violation.
- **14.2.3** The City shall provide the Contractor with an invoice identifying all sums due the City, as liquidated damages, as a result of the Contractor or a Subcontractor's failure to comply with the Good Jobs Ordinance as set forth above.
- **14.2.4** No portion of any invoice submitted by a Contractor that is subject to liquidated damages shall be paid by the City until such time as all liquidated damages relating to that invoice have been paid to the City.
- **14.2.5** The foregoing liquidated damages provisions shall be expressly set forth, subject to appropriate party name adjustments, as material provisions in all Contracts that the Contractor has with Subcontractors and the Contractor is obligated hereunder to enforce compliance in such Contracts with Subcontractors.
- **14.2.6** Any payment of liquidated damages hereunder shall not preclude a later claim, nor any later finding of a breach, or any payment of additional damages related to such later claim.
- (l). **16. Housing and Urban Development Section 3 Clause.** In the event this agreement is funded, in whole or in part, through Housing and Urban Development assistance, 24 C.F.R. §135.38 may apply and the Contractor shall then be required to comply with the following (referred to as the "Section 3 clause"):
- A. The work to be performed under this contract is subject to the requirements of Section 3 of the Housing and Urban Development Act of 1968, as amended, 12 U.S.C. § 1701u (Section 3). The purpose of Section 3 is to ensure that employment and other economic

opportunities generated by HUD assistance or HUD-assisted Projects covered by Section 3, shall, to the greatest extent feasible, be directed to low and very low-income persons, particularly persons who are recipients of HUD assistance for housing.

- B. The parties to this contract agree to comply with HUD's regulations in 24 C.F.R. part 135, which implement Section 3. As evidenced by their execution of this contract, the parties to this contract certify that they are under no contractual or other impediment that would prevent them from complying with the part 135 regulations.
- C. The contractor agrees to send to each labor organization or representative of workers with which the contractor has a collective bargaining agreement or other understanding, if any, a notice advising the labor organization or workers' representative of the contractor's commitments under this Section 3 clause, and will post copies of the notice in conspicuous places at the work site where both employees and applicants for training and employment positions can see the notice. The notice shall describe the Section 3 preference, shall set forth minimum number and job titles subject to hire, availability of apprenticeship and training positions, the qualifications for each; and the name and location of the person(s) taking applications for each of the positions; and the anticipated date the work shall begin.
- D. The contractor agrees to include this Section 3 clause in every subcontract subject to compliance with regulations in 24 C.F.R. part 135, and agrees to take appropriate action, as provided in an applicable provision of the subcontract or in this Section 3 clause, upon a finding that the subcontractor is in violation of the regulations in 24 C.F.R. part 135. The contractor will not subcontract with any subcontractor where the contractor has notice or knowledge that the subcontractor has been found in violation of the regulations in 24 C.F.R. part 135.
- E. The contractor will certify that any vacant employment positions, including training positions, that are filled (1) after the contractor is selected but before the contract is executed, and (2) with persons other than those to whom the regulations of 24 C.F.R. part 135 require employment opportunities to be directed, were not filled to circumvent the contractor's obligations under 24 C.F.R. part 135.
- F. Noncompliance with HUD's regulations in 24 C.F.R. part 135 may result in sanctions, termination of this contract for default, and debarment or suspension from future HUD assisted contracts.
- G. With respect to work performed in connection with Section 3 covered Indian housing assistance, section 7(b) of the Indian Self-Determination and Education Assistance Act (25 U.S.C. § 450e) also applies to the work to be performed under this contract. Section 7(b) requires that to the greatest extent feasible (i) preference and opportunities for training and employment shall be given to Indians, and (ii) preference in the award of contracts and subcontracts shall be given to Indian organizations and Indian-owned Economic Enterprises. Parties to this contract that are subject to the provisions of Section 3 and section 7(b) agree to comply with Section 3 to the maximum extent feasible, but not in derogation of compliance with section 7(b).
- (m). City Code of Ordinances, Ethics and Conflict of Interest Code, Provisions.

 The Person (the term "Person" shall herein be as defined in Section 38 of the City's Code of Ordinances) supplying the labor, services, equipment, materials, reports, plans, specifications, drawings, deliverables, incidentals, etc. under this Contract shall comply with all applicable

Federal, State and Municipal statutes, regulations, charters, ordinances, and rules, in effect at the time the Contract is executed, Should a change in law or regulations occur subsequent to the date of execution of the Contract that increases Contractor's project costs, the parties shall, to the extent allowed by law, negotiate an equitable resolution. Under these specified conditions, the Person referenced herein agrees to comply with all applicable laws whether or not they are expressly stated in this Contract, including but not limited to the following:

- 1. It shall be a material breach of this Contract, and, except as may be permitted by regulations or rulings of the City of Waterbury Board of Ethics it shall be a violation of the City's Code of Ordinances, for any Public Official, City Employee or Member of a Board or Commission who is participating directly or indirectly in the procurement process as set forth in the City's Code of Ordinances, including those participating in exempt transactions, to become or be the employee of any person contracting with the governmental body by whom the Official, Employee, or Board or Commission member is employed or is a member.
- 2. It shall be a material breach of this Contract, and it shall be a violation of the City's Code of Ordinances for any Person to offer, give, or agree to give any current or former Public Official, Employee or Member of a Board or Commission, or for such current or former Public Official, Employee or Member of a Board or Commission to solicit, demand, accept or agree to accept from another Person, a gratuity or an offer of employment in connection with any: decision; approval; disapproval; recommendation; preparation of any part of a program requirement or a requisition; influencing the content of any specification or procurement standard; or rendering of advice, investigation, auditing, or in any other advisory capacity in any proceeding or application, request for ruling, determination, claim or controversy, or other particular matter, pertaining to any program requirement or a Contract or Purchase Order, or to any solicitation or qualifications therefore.
- 3. It shall be a material breach of this Contract and it shall be a violation of the City's Code of Ordinances for any payment, Gratuity, or offer of employment to be made as an inducement for the award of a subcontract or order, by or on behalf of a subcontractor, the prime Contractor or higher tier subcontractor or any Person associated therewith, under a Contract or Purchase Order to the City.
- 4. The value of anything transferred or received in violation of the City's Charter, Code of Ordinances, and/or regulations promulgated there under, by any Person subject to said Charter and/or Ordinances may be recovered by the City.
- 5. Upon a showing that a subcontractor made a kickback to the City, a prime Contractor or a higher tier subcontractor in connection with the award of a subcontract or order there under, it shall be conclusively presumed that the amount thereof was included in the price of the subcontract or order and ultimately borne by the City and will be recoverable hereunder from the recipient. In addition, said value may also be recovered from the subcontractor making such kickbacks. Recovery from one offending party shall not preclude recovery from other offending parties.
- 6. It shall be a material breach of this Contract and it shall be a violation of the City's Code of Ordinances for a Person to be retained, or to retain a Person, to solicit or secure a contract with the City upon an agreement or understanding for a commission, percentage, brokerage, or contingent fee; and every Person, before being awarded a City Contract, shall deliver to the City, on a City authored form, a representation that such Person has not retained anyone in violation of this subsection 6, the failure to deliver said form being a material breach of

this Contract and a violation of the City's Code of Ordinances. Note, however, this subsection f shall not apply to full-time Employees who, as a condition of their employment, may be entitled to bonuses or other fees in accordance with their employment relationship.

- 7. The Person hereby expressly represents that he/she/it has complied with those sections of the City's Code of Ordinances requiring that said Person has (a) delivered to the City an affidavit, on a City authored form, stating that the Person and its affiliates have no delinquent taxes or other financial obligations owned to the City; (b) filed the City authored financial disclosure statement form as set forth in the City's Code of Ordinances regarding disclosure of financial interests; (c) delivered to the City a written acknowledgement, on a City authored form, evidencing receipt of a copy of the "Ethics and Conflict of Interest" ordinance for the City of Waterbury and hereby expressly represents that said Person is in full compliance with the entirety of said Code of Ordinance; and (d) filed a current list of all taxable personal and real property as required by the State of Connecticut General Statutes. Any violation of this subsection 7 shall be deemed a material breach of this Contract and shall be a violation of the City's Code of Ordinances.
- 8. The definitions set forth in the City's Code of Ordinances shall be the primary source for interpretation of the forgoing subsections 1-7.
- 9. The Contractor is hereby charged with the requirement that it shall have knowledge of, and shall fully comply will, all relevant provisions of the City's Charter and all relevant provisions of the City's Code of Ordinances, including without limitation Chapters 93, titled "Discriminatory Practices", Chapter 38 titled "Centralized Procurement System", and Chapter 39 titled "Ethics and Conflict of Interest", of said Code as may be amended from time to time.
- 10. The Contractor hereby acknowledges receipt of a copy of the Chapters 38 and 39 of City's Ordinance regarding Procurement, Ethics, and Conflicts of Interest and has familiarized itself with said Code and hereby agrees to adhere to said Code. The text of Chapters 38 and 39 of said Code may be obtained from the Office of the City Clerk of the City and on the internet at the City Clerk's web site: http://www.waterburyct.org/cityclerk, click link titled "The City of Waterbury Code of Ordinances *Passed 8/24/2009*". For Chapter 38, click on "TITLE III: ADMINISTRATION", then click on "CHAPTER 38: CENTRALIZED PROCUREMENT SYSTEM". For Chapter 39, click on "TITLE III: ADMINISTRATION", then click on "CHAPTER 39: ETHICS AND CONFLICTS OF INTEREST".
- 11. The Contractor is hereby charged with the requirement that it shall have knowledge of, and shall fully comply with, the City's Ordinance Sections 34.15 through 34.99 entitled, "Ordinance Concerning the Hiring of Waterbury Residents on Certain Publicly-Funded Construction Projects" and the State of Connecticut Legislature's Special Act No. 01-1.
- 12. Every Person who conducts business with, contracts with, or provides commodities or services to the City, is charged with notice of the extent of the powers and authority, and the limitations thereon, of the Public Officials and Employees of the City, as set forth in the charter of the City, the Code of Ordinances and any Regulations or Policies pertaining thereto. In particular, and without implying any limitation as to its applicability, it applies to all Persons who participate in the procedures pertaining to the Centralized Procurement System as set forth in Chapter 38, and the Ethics and Conflict of Interest provisions set forth in Chapter 39 of the Code of Ordinances.

- 13. INTEREST OF CITY OFFICIALS. No member of the governing body of the City, and no other officer, employee, or agent of the City who exercises any functions or responsibilities in connection with the carrying out of the project, to which this agreement pertains, shall have any personal interest, direct or indirect, in this agreement.
- 14. PROHIBITION AGAINST CONTINGENCY FEES. The Contractor hereby represents that it has not retained anyone to solicit or secure a contract with the City upon an agreement or understanding for a commission, percentage, brokerage or contingency fee.

The parties are signing this Contract on the date below their respective signatures.

ARTICLE 1. DEFINITIONS, ACCEPTANCE OF DOCUMENTS

Section 1.1 <u>Definitions</u>

Any capitalized terms not defined in this SOW shall have the same meaning as those terms have in the Contract.

Certificate of Acceptance of All Installed Equipment: A certificate signed by the Owner, acknowledging acceptance of all installed equipment, to be attached as **Schedule EE**.

Commencement Date: The date described in Section 2.2 (Commencement Date).

Energy-Savings Measures (ESMs): Any improvement to facilities or other energy-consuming systems designed to reduce energy or water consumption and operating costs and increase the operating efficiency of facilities or systems for their appointed functions. For the purposes of this SOW, Energy-Savings Measures for this project are those listed in **Schedule A** (Energy Savings Guarantee).

Energy Savings Guarantee: The guarantee that is achieved as a result of the installation and operation of the Equipment and provision of services provided for in this SOW and in accordance with the Savings Calculation Formula as set forth in **Schedule C** (Measurement & Verification Plan).

Equipment: Goods which the QESP is to install in accordance with and as set forth in Schedule R (Equipment to Be Installed by QESP).

Energy Use Intensity (EUI): A unit of measurement that describes a building's energy use and represents the energy consumed by a building relative to its size.

Environmental Laws: any Federal, State or local statute, law, ordinance, code, rule, regulation, order, or decree regulating or relating to the protection of human health or the environment, or imposing liability or standards of conduct concerning any hazardous, toxic or waste, substance, element, compound, mixture or material, as now or at any time hereafter in effect including, without limitation, the Federal Comprehensive Environmental Response, Compensation and Liability Act, as amended, 42 U.S.C. Sec. 9601 et seq., the Superfund Amendments and Reauthorization Act, 42 U.S.C. Secs. 9601 et seq., the Federal Oil Pollution Act of 1990, §§ 2701, et seq., the Federal Toxic Substance Control Act, 15 U.S.C. §§ 6901 et seq., the Federal Hazardous Material Transportation Act, 49 U.S.C. §§ 1801 et seq., the Federal Clean Air Act, 42§ 7401 et seq., the Federal Water Pollution Control Act, 33 U.S.C. § 1251 et seq., the River and Harbors Act of 1899, 33 U.S.C. §§ 401 et seq., and all rules and regulations of the Environmental Protection Agency, or any other state or federal department, board, or agency, or any other agency or governmental board or entity having jurisdiction over environmental or health and safety matters, as such have been amended.

Goods: All things which are movable, including, but not limited to, supplies, materials, equipment, hardware, software, specially manufactured things, a component incorporated into another thing and things that are attached to real property and that may be severed

from the real property without material harm to the things, together and with any and all additions, modifications, attachments, replacements and parts.

Interim Period: The period from SOW execution until the Commencement Date.

Material Change: Any change in or to the Project Site(s), whether structural, operational or otherwise in nature which reasonably could be expected, in the sole judgment of the Owner, to increase or decrease annual energy consumption in accordance with the provisions and procedures set forth in **Schedule B** (Baseline Energy Consumption) and **Schedule C** (Measurement & Verification Plan) by at least five (5 %) percent after adjustments for climatic variations. Those changes may include, but are not limited to, any one of the following:

- (i) manner of use of the Project Site(s) by the Owner;
- (ii) hours of operation for the Project Site(s) or for any Equipment or energy using systems operating at the Project Site(s);
- (iii) permanent changes in the comfort and service parameters set forth in Schedule U (Standards of Comfort);
- (iv) occupancy of the Project Site(s);
- (v) structure of the Project Site(s), including total square footage of the buildings;
- (vi) types and quantities of Equipment used at the Project Site(s)
- (vii) modification, renovation or construction at the Project Site(s);
- (viii) the Owner's failure to provide maintenance of and repairs to the Equipment in accordance with Schedule CC (City's Maintenance Responsibilities);
- (ix) the replacement, addition or removal of energy and water consuming devices whether plug-in or fixed assets;
- (x) casualty or condemnation of the Project Site(s) or Equipment;
- (xi) changes in utility provider or utility rate classification or number of days in utility billing cycle;
- (xii) modifications, alterations or overrides of the energy management system schedules or hours of operation, set back/start up or holiday schedules; or
- (xiii) any other conditions other than weather affecting energy or water use or energy costs at the Project Site(s).

Project Site(s): The facilities of the Owner in need of energy and water saving equipment and services designed to reduce consumption and associated costs, as identified in **Schedule Q**.

SOW: This Energy-Savings Performance Project Statement of Work and all Schedules and Exhibits attached hereto.

SOW Sum: The dollar value sum of all materials, labor, auditing, design, engineering, project construction management fees, overhead, profit, contingency and subcontracted services related to the project, as set forth in Schedule H, Final Project Cost and Project Cash Flow Analysis.

Substantial Completion of ESM: The stage in the progress of the Work where the

installation of an ESM, or portion thereof, is sufficiently complete in accordance with the SOW documents so that the Owner can utilize and take beneficial use of the subject ESM, or portion thereof, for its intended use or purpose. Substantial Completion of ESM shall not be deemed to have occurred until the ESM has been commissioned, accepted, and the Owner executes the Notice of Substantial Completion of ESM, which shall not be unreasonably withheld.

Work: The Equipment or Services or both to be Performed under the SOW.

Section 1.2. <u>Acceptance of Investment-Grade Energy Audit Report and Other Documents</u>

The completed and accepted IGEA Report is attached as Exhibit B.

For purposes of Performance and synergy between or among documents, the provisions of this SOW and its schedules and exhibits shall take precedence and govern over those in the IGEA Report.

ł

PAYMENTS AND SCHEDULES

ARTICLE 2. PURCHASE AND SALE; COMMENCEMENT DATE AND TERMS; INTERIM PERIOD

Section 2.1. Purchase and Sale

QESP shall provide the Equipment and Services as provided in Schedule R (Equipment to Be Installed by QESP) and Schedule J (Compensation to QESP for Annual Services) in accordance with the terms and conditions set forth in Schedule I (Payment Schedule).

The SOW Sum for the Work is \$27,415,059.00 as set forth in Schedule H (Final Project Cost & Project Cash Flow Analysis). Payment terms are described in Schedule I (Payment Schedule). The SOW Sum does not include the Compensation to QESP for Annual Services as detailed in Schedule J.

QESP shall Perform the Work, or cause the Work to be Performed, and all related Services identified in Schedule R (Equipment to be Installed by QESP) and the Services detailed in Schedule BB (QESP's Maintenance Responsibilities) and Schedule J (Compensation to QESP for Annual Services). QESP shall supervise and direct the Work and shall be responsible for all construction means, methods, techniques, sequences, and procedures and for coordinating all portions of the Work under this SOW. QESP shall pay for all Equipment, Services and transportation necessary or appropriate for the timely and proper Performance of the Work in accordance with all applicable Schedules.

QESP shall be paid the SOW Sum in accordance with **Schedule I** (**Payment Schedule**). Payments will be made on a progress basis in accordance with **Schedule I** (**Payment Schedule**), for Work completed and authorized by Owner during the Interim Period. Retainage of five (5 %) percent will be withheld until the Commencement Date.

Section 2.2. Commencement Date

The Commencement Date shall be the first day of the month after the month in which the last unsatisfied condition of the following conditions shall have been satisfied: (1) QESP shall have installed and commenced operating all of the Equipment specified in **Schedule R** (Equipment to Be Installed by QESP) and in accordance with the provisions of ARTICLE 8 (Construction Schedule and Equipment Installation; Approval), **Schedule S** (Construction and Installation Schedule) and Schedule T (Systems Start-Up and Commissioning; Operating Parameters of Installed Equipment); (2) QESP shall have delivered to Owner a notice that it has installed all of the Equipment and that the Equipment is operating properly, all in accordance with this Section; and (3) Owner has inspected and accepted said installation and operation as evidenced by executing and delivering to QESP the Schedule EE (Certificate of Final Acceptance of all ESMs/Final Completion).

Owner shall have thirty (30) calendar days after receiving the installation notification by

the QESP to inspect the Equipment. If Owner does not reject any of the Equipment, then Owner shall execute and forward the Certificate of Acceptance of All Installed Equipment to the QESP within seven (7) calendar days after concluding the inspection. Owner may reject some or all of the Equipment if either the Equipment or its installation fails to meet reasonably accepted standards of workmanship, does not comply with applicable building codes, or is otherwise not in compliance with the Contract or this SOW. Owner shall not deliver to QESP the Certificate of Acceptance of All Installed Equipment and QESP shall not be paid in full, including retainage, until and after any punch list is completed and QESP has satisfied any and all claims for labor and materials, including, but not limited to, providing Lien waiver certificates. The Certificate of Acceptance of All Installed Equipment will not be unreasonably withheld by the Owner.

Compensation payments due to QESP for on-going Services and maintenance under this SOW as set forth in **Schedule J** (**Compensation to QESP for Annual Services**) shall begin thirty (30) calendar days from the Commencement Date. Compensation payments due to QESP for on-going maintenance services for an ESM and under this SOW as set forth in **Schedule J** (**Compensation to QESP for Annual Services**) shall begin thirty (30) calendar days from the Substantial Completion of ESM date.

Section 2.3. Term of SOW; Interim Period

The term of this SOW shall end on the date which is exactly five (5) years from the Commencement Date. The SOW shall be effective and binding upon the parties upon its execution by the parties. All energy savings achieved during the Interim Period shall be fully credited to Owner.

ARTICLE 3. ENERGY SAVINGS GUARANTEE; ANNUAL RECONCILIATION; PAYMENTS TO QESP

Section 3.1. Rebates and Incentives

As specified in **Schedule K**, QESP shall identify and describe dollar amounts for any eligible rebate and incentive funds from the CT Energy Efficiency Fund, CT Clean Energy Finance and Investment Authority, and other incentive and grant programs, to reduce overall project costs.

Section 3.2. Energy Savings Guarantee

Subject to the adjustments provided for in this **Exhibit A**, including the Schedules attached hereto, QESP guarantees that the annual level of Energy Savings shall be in accordance with the measurement and verification of the Energy-Savings Measures as set forth in **Schedule C** (**Measurement & Verification Plan**). The Energy Savings Guarantee is set forth in annual increments for the term of the SOW as specified in **Schedule A** (**Energy Savings Guarantee**) and QESP guarantees that it is sufficient to cover any and all annual payments required to be made by the Owner as set forth in **Schedule J** (**Compensation to QESP for Annual Services**) and **Schedule I** (**Payment Schedule**).

Section 3.3. Annual Review and Reimbursement/Reconciliation

QESP shall measure and calculate Energy Savings as specified in Schedule C (Measurement & Verification Plan) and Schedule B (Baseline Energy Consumption) and shall prepare and deliver to Owner an annual reconciliation report no later than forty-five (45) days following each (1) twelve-month anniversary of the Commencement Date, or (2) the date that QESP shall have received the last of the energy usage records and data referenced in Articles 3 and 5 of this SOW, whichever is later, for the entire term of this SOW, including the final report due on or before the date which is exactly five (5) years and zero (0) days from the first day of the month following the Commencement Date.

If the reconciliation reveals a shortfall in annual Energy Savings in any one year during the guarantee period, QESP shall make payment to the Owner in the amount of the Verified Energy Cost Savings shortfall no later than sixty (60) days after the Owner receives the reconciliation report. If the reconciliation reveals an excess in annual Energy Savings, the excess savings shall remain with the Owner, and shall not be used to cover potential Energy Savings shortages in subsequent years or actual Energy Savings shortages in previous years.

Section 3.4. OESP Compensation and Fees

QESP has structured the Energy Savings Guarantee referred to in 3.1 above such that it will be at least equal to any and all annual payments, combined, required to be made by the Owner as shown in Schedule I (Payment Schedule), Schedule J (Compensation to QESP for Annual Services) and Schedule BB (QESP's Maintenance Responsibilities).

Section 3.5. Billing Information Procedure

Payments due to QESP under this Section 3 shall be calculated each year in the following manner:

- (i) By 30 days after receipt, Owner shall provide QESP with copies of all energy bills for the Project Site(s) which it shall have received for the preceding month;
- (ii) Upon receipt of the required information, QESP shall calculate the savings in accordance with the agreed-upon calculation formulae in **Schedule C** (Measurement & Verification Plan).
- (iii) Based upon paragraphs (i) and (ii) above, QESP shall prepare and send to Owner monthly invoices beginning in the first month of each Guarantee Period which shall set forth for each year the amounts of the Energy Savings calculated in accordance with Schedule C (Measurement & Verification Plan) and for the services as provided for in Schedule J (Compensation to QESP for Annual Services). The invoice will set forth the total annual payment due from Owner, which shall be paid in 12 equal monthly installments.

Section 3.6. Effective Date of Payment Obligation

Notwithstanding the above provisions in Section 3, Owner shall not be required to begin any of the measurement and verification services payments in **Schedule J** to QESP under this SOW unless and until all Equipment installation is completed by QESP in accordance with the provisions of Article 8 (Construction and Equipment Installation; Approval) and **Schedule T** (**Systems Start-Up and Commissioning**), and accepted by Owner as evidenced by the signed Certificate of Acceptance as set forth in **Schedule EE** (Certificate of Final Acceptance of all ESMs/Final Completion), and unless and until said Equipment is fully and properly functioning.

ARTICLE 4. NON-APPROPRIATION OF FUNDS – NOT USED

DESIGN AND CONSTRUCTION PHASE

ARTICLE 5. ENERGY USAGE RECORDS AND DATA

Owner has furnished and shall continue to furnish (or authorize its energy suppliers to furnish) during the term of this SOW to QESP or its designee, upon its request, all of its records and complete data concerning energy and water usage and related maintenance for the Project Site(s).

ARTICLE 6. LOCATION AND ACCESS

QESP represents and warrants that at time of contract execution there exists sufficient space on the Project Site(s) for the installation and operation of the Equipment for the entire useful life of the Equipment.

Owner shall take reasonable steps to protect such Equipment from harm, theft and misuse during the term of this SOW. Owner shall provide access to the Project Site(s) for QESP to perform any function related to this SOW during regular business hours, or such other reasonable hours as may be requested by QESP and acceptable to the Owner. QESP shall be granted access to make emergency repairs or corrections as it may, in its discretion, determine are needed. The QESP's access to Project Site(s) to make emergency repairs or corrections as it may determine are needed shall not be unreasonably restricted by the Owner. QESP shall immediately notify the Owner when emergency action is taken and follow up with written notice within three (3) business days specifying the action taken, the reasons for the action, and the impact upon the Project Site(s), if any.

ARTICLE 7. PERMITS AND APPROVALS; COORDINATION

Section 7.1. Permits and Approvals

The QESP shall be responsible for developing all required documentation and obtaining all necessary permits and approvals for the work and installation of the Equipment. The Equipment and the operation of the Equipment by QESP shall at all times comply with all federal, state and local code requirements in effect as of the execution date of this **Exhibit A**. Furthermore, all Work shall comply with the Connecticut State Building Code and the City of Waterbury Building Code. The QESP shall be responsible for providing all drawings and documentation necessary to demonstrate compliance. Owner shall be responsible for providing design approval and comments within 15 days of drawing and documentation submittal by QESP. The QESP shall coordinate all required inspections with the authority having jurisdiction.

QESP shall furnish copies of any permit or license which is required to perform the Work to the Owner before the QESP commences the portion of the Work requiring such permit or license. In no event shall Owner be responsible for payment of any permit or similar fees. It being further agreed and understood that the Owner agrees to provide the

information, and approvals which may be reasonably required for permitting.

Section 7.2. Coordination During Installation

The Owner and QESP shall coordinate the activities of QESP's Equipment installers with those of the Owner, its employees, and agents. QESP shall cooperate with Owner when performing Work to minimize conflicts and facilitate usage of Project Site(s). QESP shall not commit or permit any act which will interfere with the performance of business activities conducted by the Owner or its employees without prior written approval of the Owner.

In addition, QESP shall provide adequate building and fire code egress from the Project Site(s) while performing the Work and, if required, shall be responsible for preparing egress plans for Owner and State Fire Marshal approval.

ARTICLE 8. CONSTRUCTION SCHEDULE AND EQUIPMENT INSTALLATION; APPROVAL

Section 8.1. Construction Schedule; Equipment Installation

Construction and Equipment installation shall proceed in accordance with the construction schedule approved by Owner and attached as **Schedule S** (**Construction and Installation Schedule**).

Section 8.2. Systems Startup and Equipment Commissioning

The QESP shall conduct thorough and systematic performance tests of each element and total system of the installed Equipment in accordance with the procedures specified in Schedule T (Systems Start-Up and Commissioning) prior to delivering to the Owner the installation notification indicating that the Equipment is ready for inspection by the Owner. Testing shall be designed to determine if the Equipment is functioning in accordance with both its published specifications and the Schedules to this SOW, and to determine if modified building systems, subsystems or components are functioning properly within the new integrated environment. The QESP shall provide a minimum of 10 days' notice to the Owner and any third-party technical support entity, as requested by DEEP or the Owner, of the scheduled test(s). The Owner shall have the right to be present, and to invite any third party to be present, at any or all such tests conducted by QESP and/or manufacturers of the Equipment. The QESP shall correct and/or adjust all deficiencies in systems and Equipment operations that may be observed during system commissioning procedures as specified in Schedule T (Systems Start-Up and Commissioning). Prior to Owner executing the Schedule EE (Certificate of Final Acceptance of all ESMs/Final Completion), QESP shall provide Owner with documentary evidence that the Equipment installed is the Equipment specified in Schedule R (Equipment to Be Installed by QESP).

ARTICLE 9. EQUIPMENT WARRANTIES

QESP represents and warrants that all Equipment installed as part of this SOW shall be new, materially free from defects in materials or workmanship, installed properly in a good and workmanlike manner, and shall function properly for the warranty periods identified in Schedule D.

After the applicable NORESCO warranty period, QESP shall have no responsibility for performing maintenance, repairs, or making manufacturer warranty claims relating to the Equipment, except as provided in **Schedule BB (QESP's Maintenance Responsibilities)**.

QESP shall cause all available manufacturers' warranties, which shall also be listed in Schedule D, relating to the Equipment to be issued in the name of and delivered to Owner no later than ten (10) business days after the QESP warranty period begins, the QESP shall deliver the warranties applicable to the subject Equipment to the Owner. At the Owner's request, the QESP shall act as the Owner's agent and representative to pursue on the Owner's behalf any available rights and remedies which the Owner may have against the manufacturers under the warranties. QESP shall, during the warranty period, notify the Owner whenever defects in Equipment parts or performance occur which may give rise to such rights and remedies. During this period, if the QESP fails to notify the Owner of Equipment defects or any warranty issues of which it is aware, QESP shall bear the full cost and expenses of any risk of damage or damage to the Equipment and its performance, including damage to property and Equipment of the Owner or the Project Site(s). The cost and expenses shall be limited to the cost to repair or replace, at the City's reasonable option, the installed Equipment with a defect or warranty issue.

The warranties shall specify that new or reconditioned, parts may be used and installed when repair is necessitated by malfunction.

Notwithstanding the above, nothing in this section shall be construed to alleviate/relieve the QESP from complying with its obligations to perform under all terms and conditions of this SOW and as set forth in all attached Schedules.

ARTICLE 10. STANDARDS OF COMFORT

QESP will maintain and operate the Equipment in a manner which will provide the standards of heating, cooling, ventilation, hot water supply, and lighting quality and levels as described in **Schedule U** (**Standards of Comfort**). During the term of this SOW, QESP and Owner will maintain, respectively according to **Schedule BB** (**QESP's Maintenance Responsibilities**) and **Schedule CC** (**City's Maintenance Responsibilities**), and operate the Equipment in a manner that will provide the standards of comfort and levels of operation as described in **Schedule U** (**Standards of Comfort**).

ARTICLE 11: ENVIRONMENTAL REQUIREMENTS

Section 11.1. Excluded Material and Activities

Owner recognizes that in connection with the installation and/or service or maintenance of Equipment at a Project Site(s), QESP may encounter (i) asbestos or materials containing asbestos, (ii) fungus (any type of form of fungi, including mold or mildew, and myotoxins, spores, scents or by-products produced or released by fungi), (iii) incomplete or damaged work or systems or code violations that may be discovered during or prior to the Work of this SOW, or pollutants, hazardous wastes, hazardous materials or other contaminants regulated by the Environmental Laws (collectively "Hazardous Materials"). If QESP discovers any of the conditions listed above or other Hazardous Materials QESP shall immediately cease Work, remove all QESP personnel and Contractor Parties from the Project Site(s), and notify the Owner. QESP shall undertake no further Work on the Project Site(s), except as authorized by the Owner in writing, as the Owner will perform or arrange for the performance of any remediation of the identified condition. Notwithstanding any other provision in this SOW, any such event of discovery or remediation by the Owner shall not constitute a Material Breach or Other Breach by the Owner. If Owner notifies QESP to cease Work pursuant to this Section, then the time for completion of Work will be automatically extended by the amount of time of the Work stoppage and any additional time that may be required to remobilize and reschedule the work. The parties shall negotiate in good faith any increased costs associated with the Work stoppage and shall modify all appropriate exhibits and schedules accordingly.

QESP shall be responsible in all respects for any Hazardous Materials and any other materials regulated by the Environmental Laws, including, without limitation, those listed in this section that it may bring to the Project Site(s). This responsibility includes, but is not limited to, storage, handling, use, transportation, treatment, disposal, discharge, leakage, detection, removal, containment, remediation and all costs and expenses associated with such.

Section 11.2. Polychlorinated Biphenyl (PCB) Ballasts; Mercury Lamps

QESP shall enter into an agreement with a waste transporter that is permitted by DEEP to transport PCB ballasts. The agreement between QESP and the transporter shall require that the transporter (1) transport and dispose of the PCB Ballasts in accordance with all applicable Environmental Laws, (2) provide an informational packet, packing receptacles and instructions, labels and shipping materials, (3) provide transportation, and incineration or disposal services for PCB ballasts, (4) remove all capacitors and asphalt potting compound materials from Owner's PCB ballasts, (5) incinerate or dispose of them at a federally-approved facility, (6) provide to Owner a Certificate of destruction issued by the federally-approved disposal facility and (7) comply with all applicable Environmental Laws.

QESP shall enter into an agreement with an authorized lamp recycling company, pursuant to which the recycling company shall provide all necessary or appropriate goods and services, including but not limited to, approved containers, materials required to label, transportation and recycling, for all manner of handling of mercury lamps and their

removal from the Project Site(s), all in accordance with the Environmental Laws. The QESP shall verify and ensure that the lamp recycling company performs the work or Work only pursuant to and during the term of a validly existing agreement with the QESP. The agreement shall require the recycling company to provide a copy of the required manifest or other shipping documents to QESP and to forward a copy to the Owner. The QESP shall verify and ensure that the lamp recycling company maintains current, throughout the term of that agreement, all appropriate permits from all applicable jurisdictions to Perform any such work or Work.

To the extent required by the Environmental Laws, the Owner shall sign manifests for all PCB ballasts and manifests or other shipping documents for mercury lamps removed from the Project Site(s).

ARTICLE 12. TRAINING BY QESP

The QESP shall conduct the training program described in **Schedule V** (**QESP's Training Responsibilities**). The Owner shall not commence the inspection of the Equipment in preparation for executing the Certificate of Acceptance of All Installed Equipment until QESP completes the training specified in **Schedule V** (**QESP's Training Responsibilities**). The QESP shall provide ongoing training whenever deemed to be needed or appropriate by the Owner and QESP with respect to updated or altered Equipment, including upgraded software. If the QESP provides ongoing training, the cost of such training will be billed to Owner in accordance with **Schedule J** and this training shall have no effect on the prior Certificate of Acceptance of All Installed Equipment.

POST-CONSTRUCTION PHASE

ARTICLE 13. EQUIPMENT SERVICE

Section 13.1. Actions by QESP

QESP shall provide all service, repairs, and adjustments to the Equipment listed in Schedule BB (QESP's Maintenance Responsibilities). Owner shall have no responsibility for any costs or expenses for Equipment service, repairs, and adjustments listed in Schedule BB, except as set forth in Schedule J (Compensation to QESP for Annual Services), provided, however, that when the need for maintenance or repairs principally arises due to damage caused by the Owner or any employee or other agent of Owner, and QESP can demonstrate a causal connection between the damage and the Owner actions, QESP may charge Owner for the actual cost of the maintenance or repair insofar as such cost is not covered by any warranty or insurance proceeds.

Section 13.2. Malfunctions and Emergencies

Owner shall use its best efforts to notify the QESP or its designated sub-contractors within seventy-two (72) hours after the Owner's actual knowledge and occurrence of: (i) any malfunction, alteration or modification in the operation of the Equipment or any preexisting energy related equipment that has a material impact upon the Energy Savings Guarantee or (ii) any interruption or alteration to the energy supply to the Project Site(s).

Where Owner exercises due diligence in attempting to assess the existence of a malfunction, interruption, or alteration, it shall be deemed to be not at fault in failing to correctly identify such conditions as having a material impact upon the Energy Savings Guarantee. Owner shall notify QESP within seventy-two (72) hours upon its having actual knowledge of any such condition affecting the Equipment. QESP shall respond or cause its designee(s) to respond within seventy-two (72) hours and shall proceed immediately with corrective measures. Any telephonic notice of such conditions by Owner shall be followed within five (5) business days by written notice to QESP from Owner. If Owner unreasonably delays in so notifying QESP of a malfunction or

emergency, and the malfunction or emergency is not otherwise corrected or remedied, QESP may charge Owner for its loss, due to the delay, associated with the Energy Cost Savings Guarantee under this SOW for the particular time period, provided that QESP is able to show the direct causal connection between the delay and the loss.

The QESP will provide a written record of all Service performed. This record will indicate the reason for the service, description of the problem and the corrective action performed.

Section 13.3. Actions by Owner

Owner shall not move, remove, modify, alter, or change in any way any part of or all of the Equipment without the prior written approval of QESP except as set forth in **Schedule CC** (City's Maintenance Responsibilities). Notwithstanding the foregoing, Owner may take reasonable steps to protect the Equipment if, due to an emergency, it is not possible or reasonable to notify QESP before taking any such actions. In the event of such an emergency, Owner shall take reasonable steps to protect the Equipment from damage or injury and shall follow instructions for emergency action provided in advance by QESP. Owner agrees to maintain the Project Site(s) in good repair and to protect and preserve all portions which may in any way affect the operation or maintenance of the Equipment.

ARTICLE 14. MODIFICATION, UPGRADE OR ALTERATION OF THE EQUIPMENT

Section 14.1. Modification or Other Handling of Equipment

During the term of this SOW, Owner shall not move, remove, modify, alter, or change in any way any part of or all of the Equipment or the sufficient space necessary for the proper operation of the Equipment, without the prior written approval of QESP except as set forth in Schedule CC (City's Maintenance Responsibilities).

Section 14.2. Upgrade or Alteration of Equipment

QESP shall at all times have the right, subject to Owner's prior written approval, which approval shall not be unreasonably withheld, to change the Equipment, revise any procedures for the operation of the Equipment or implement other ESMs in the Project Site(s), provided that:

(i) the QESP complies with the standards of comfort and services set forth in **Schedule U (Standards of Comfort)**; (ii) such modifications or additions to, or replacement of the Equipment, and any operational changes, or new procedures are necessary to enable the QESP to achieve the Energy Savings Guarantee at the Project Site(s) and; (iii) any cost incurred

relative to such modifications, additions or replacement of the Equipment, or operational changes or new procedures shall be the responsibility of the QESP.

All modifications, additions or replacements of the Equipment or revisions to operating or other procedures shall be described in a supplemental schedule(s) to be provided to the Owner for approval, which shall not be unreasonably withheld, provided that any replacement of the Equipment shall, unless otherwise agreed, be new Equipment and have equal or better potential to reduce energy consumption at the Project Site(s) than the Equipment being replaced. The QESP shall have the right to update any and all software to be used in connection with the Equipment in accordance with the provisions of Section 17.1(Ownership of Certain Proprietary Rights) and Schedule BB (QESP's Maintenance Responsibilities). All replacements of and alterations or additions to the Equipment shall become part the Equipment described in Schedule R (Equipment to Be Installed by QESP) and shall be covered by the provisions and terms of Article 8 (Construction Schedule and Equipment Installation; Approval).

ARTICLE 15. MATERIAL CHANGES

Section 15.1. Reported Material Changes; Notice by Owner

The Owner shall use its best efforts to deliver to the QESP a written notice describing all proposed Material Changes in the Project Site(s) or in the operations of the Project Site(s) at least thirty (30) days before any proposed Material Change is implemented or as soon as is practicable after an emergency or other unplanned event. Notice to the QESP of Material Changes which result from a bona fide emergency or other situation which precludes advance notification shall be deemed to be sufficient notice under this section if given by the Owner within seventy-two (72) hours after having actual knowledge that the event constituting the Material Change occurred or was discovered by the Owner to have occurred. In the event of a Material Change, the Parties will negotiate an equitable adjustment in the baseline or Energy Savings Guarantee in accordance with the terms of **Schedule C** and **Schedule B**.

Section 15.2. Other Adjustments

Both parties have a vested interest in meeting the Energy Savings Guarantee of the SOW. As such, at the request of the Owner the QESP shall cooperate as necessary or appropriate to investigate, identify and correct any changes that prevent the Energy Cost Savings Guarantee from being realized. As a result of such investigation, QESP and Owner shall determine what, if any, adjustments to the baseline will be made in accordance with the provisions set forth in **Schedule C** (**Measurement & Verification Plan**) and **Schedule B** (**Baseline Energy Consumption**).

ARTICLE 16. PERFORMANCE BY QESP

Section 16.1. Corrective Action; Accuracy of the Services

QESP shall perform all Work in such a manner so as not to damage the structural integrity of the Project Site(s) or their operating systems and so as to conform to the standards set forth in **Schedule U** (**Standards of Comfort**) and the construction schedule specified in **Schedule S** (**Construction and Installation Schedule**). QESP shall repair and restore to its original condition any area which it damages or otherwise disturbs in the course of performing Work under this SOW. The Owner reserves the right to review the Work performed by QESP as the Work progresses and to direct QESP to take certain corrective action if, in the opinion of the Owner, the structural integrity of the Project Site(s) or its operating system is or will be damaged. All costs associated with such corrective action to damage caused by QESP's performance of the Work shall be borne by QESP.

QESP shall remain responsible for the professional and technical accuracy of all services performed, whether by the QESP or its subcontractors or others on its behalf, throughout the term of this SOW.

Section 16.2. Annual Reporting Requirements; Annual ENERGY STAR Rating

At the end of each year, as defined in **Schedule A** (Energy Savings Guarantee), during the guarantee period and no later than ninety (90) days thereafter, the QESP shall complete and submit the data required in **Schedule C** (Measurement & Verification Plan).

ADMINISTRATION

ARTICLE 17. OWNERSHIP OF CERTAIN PROPRIETARY RIGHTS; EXISTING EQUIPMENT

Section 17.1. Ownership of Certain Proprietary Proper Rights

Owner shall not, by virtue of this SOW, acquire any interest in any formulas, patterns, devices, secret inventions or processes, copyrights, patents, other intellectual or proprietary rights, or similar items of property which are or may be used in connection with the Equipment. The QESP shall either grant to the Owner or cause the Owner to be granted, as applicable, a perpetual, irrevocable royalty-free license for any and all software or other intellectual property rights necessary for the Owner to continue to operate, maintain, and repair the Equipment in a manner that will yield Energy Cost Savings Guarantee for the specified SOW term. QESP shall not be liable for providing new versions of software or other enhancements if or unless such new versions or enhancements are necessary to achieve the Energy Savings Guarantee.

Section 17.2. Ownership and Removal of Existing Goods

The Owner holds all Title to the Goods located at the Project Site(s) at the time of execution of this SOW. The Owner shall retain Title to the Goods even if the Goods are replaced or their operation made unnecessary by Work pursuant to this SOW. If applicable, QESP shall advise the Owner in writing of all Goods to be replaced at the Project Site(s) and the Owner shall, within ten (10) days, designate in writing to the QESP which Goods the Owner agrees are to be replaced and which the QESP shall remove to a location within the Project Site(s) which the Owner selects. The Owner shall be responsible for and designate the storage site for any Goods that shall remain on the Project Site(s).

ARTICLE 18. MATERIAL BREACH

Section 18.1. NOT USED

Section 18.2. Events of Material Breach by OESP

Each of the following events or conditions shall constitute a Material Breach of the Contract by QESP:

- (i) the standards of comfort and service set forth in **Schedule U** (**Standards of Comfort**) are not met due to failure of QESP to properly design, install, maintain, repair or adjust the Equipment, except that such failure, if corrected or cured within five (5) days after written notice by Owner to QESP demanding that such failure be cured, shall be deemed to be cured for purposes of this SOW;
- (ii) failure to furnish and install the Equipment and make it ready for use within the time specified by this SOW as set forth in Schedule R (Equipment to Be Installed by QESP) and Schedule S (Construction and Installation Schedule); and
- (iii) failure by the QESP to pay any amount due the Owner as set forth in **Schedule A (Energy Savings Guarantee)**.
- (iv) Violation by the QESP, or any of QESP's employees, Subcontractors, agents and/or consultants, or any of QESP's Subcontractors' employees, agents and/or consultants of the following:

No drinking of alcoholic beverages, smoking or use of controlled substances is permitted on the grounds. QESP shall insure that none of its employees, Subcontractors, agents, and/or consultants, or its Subcontractors' employees, agents, and/or consultants (all hereinafter collectively referred to as "QESP Responsible Parties") report to the site impaired by alcohol or controlled substances. QESP bears the responsibility of determining any QESP Responsible Parties are in any way impaired and whether the safety of the public, QESP Responsible Parties, or the Owner, are jeopardized. QESP shall provide drinking water for all QESP Responsible Parties. QESP Responsible Parties are prohibited from any communication or engagement with students and the use of indecent language. All doing so will be immediately removed from the site. Artwork or decoration found on vehicles belonging QESP Responsible Parties parked on or near City of Waterbury school property which contain indecent language or pictures shall either be immediately covered or removed from the location.

ARTICLE 19. ASSIGNMENT – NOT USED

ARTICLE 20. ADDITIONAL REPRESENTATIONS AND WARRANTIES OF THE PARTIES

Section 20.1. Owner Warranty - NOT USED

Section 20.2. **QESP Warranty**

QESP represents and warrants that:

- (i) it shall ensure that any subcontractors that it uses shall be qualified subcontractors who are licensed and bonded in the State of Connecticut to perform the Work subcontracted to them under this SOW;
- (ii) the Equipment will meet or exceed the provisions set forth in Section 8.2 (Systems Start Up and Equipment Commissioning) and in Schedule T (Systems Start-Up and Commissioning); and
- (iii) the Equipment is or will be compatible with all mechanical and electrical systems, subsystems, or components with which the Equipment interacts, and that, as installed, neither the Equipment nor such other systems, subsystems, or components, which are currently compliant with applicable codes, standards, regulations and laws and have been maintained and are fit for service, will materially adversely affect each other as a direct or indirect result of Equipment installation, operation or maintenance.

ARTICLE 21. MICELLANEOUS DOCUMENTATION PROVISIONS

Section 21.1. Waiver of Liens, Construction Performance and Payment Bonds, Labor and Material Payment Bonds

The QESP shall not begin any Performance until the QESP shall have delivered to the Owner such performance and labor and material bonds as the Owner may require.

Section 21.2. Owner's Responsibilities

(a) Owner's Maintenance Responsibilities

Owner agrees that it shall adhere to, follow and implement the energy conservation procedures and methods of operation to be set forth in **Schedule CC** (**City's Maintenance Responsibilities**) after Owner delivers to the QESP a Notice of Substantial Completion of ESM.

(b) Inspection of Project Site(s)

QESP shall have the right once a month, with prior notice, to inspect Project Site(s) to determine if Owner is complying, and shall have complied with its obligations as set forth in this Section. For the purpose of determining Owner's compliance, the checklist set forth in **Schedule DD** (Facility Maintenance Checklist), shall be used to measure and record determination of Owner's said compliance. Owner shall make the Project Site(s) available to QESP for and during each monthly inspection, and shall have the right to witness each inspection alongside QESP and QESP's recordation on the checklist. Owner may complete its own checklist at the same time. QESP shall not interfere with the Owner's operations during any monthly inspection.

Section 21.3. Liens and Waiver of Liens

(i) If any part of the Work shall become subject to any vendor's, mechanic's, laborer's, materialman's or other lien or encumbrance (collectively, "Liens")

based upon the delivery of the Work, the QESP shall cause any or all of the Liens to be discharged of record at its sole cost and expense prior to the Commencement Date or, if not of record at that time, then within one hundred twenty (120) calendar days after it receives notice of the Liens.

- (ii) Lien waiver certificates, in a form and substance satisfactory to the Owner, shall be submitted by the QESP with all payment requests certifying that the Work is free and clear of all Liens and any other encumbrance for any part of the Work completed. QESP shall also provide Lien waivers at the time of the Commencement Date in a form and substance satisfactory to the Owner that. upon completion and acceptance of the Work, the Work is free and clear of all Liens. If any person or entity refuses to furnish a release or waiver, the QESP shall, at the request of the Owner, furnish a bond satisfactory to the Owner to indemnify the Owner against any potential Lien. If a Lien remains unsatisfied after payments are made, then the QESP shall refund to the Owner all moneys that they may be compelled to pay in discharging the Lien, including all costs and reasonable attorney's fees, no later than thirty (30) days after receiving a written refund request from the Owner. The Owner may withhold amounts due to the QESP as it deems to be necessary or appropriate to protect the Owner against any losses arising out of the outstanding Liens or claims of former Lien holders and to reimburse the Owner for any costs and expenses incurred in the satisfaction and discharge of the Liens and, in required, the procuring of similar Work.
- (iii) Notwithstanding the provisions of this Liens and Waiver of Liens Section, a Municipality may execute and deliver financing documents and instruments in connection with a Municipality's SOW that allow the filing of Liens for purposes of securing the interests of the financing institution involved in that Municipal transaction. If so, then this Section shall be read and interpreted to allow the filing of Liens in accordance with the provisions of the financingrelated documents and instruments, but only as applicable to and for purposes of the Municipality's SOW.

ARTICLE 22. TERMINATION - NOT USED

ARTICLE 23. COMPLETE SOW

This SOW together with all Schedules attached or to be attached hereto, as provided for by this SOW, shall constitute the entire SOW between both parties and this SOW may not be amended, modified, or terminated except by a duly authorized amendment to the Contract.

ATTACHMENT 1. Schedules

Attachments on pages that follow.

SCHEDULE A

Energy Savings Guarantee

This Schedule A sets forth provisions and conditions of the QESP's Energy Savings Guarantee (the "Guarantee"). The "Annual Reporting Requirements" for the "Performance by QESP" section of the SOW will begin on the First Guarantee Period and continue for the Guarantee Term. Should the SOW be terminated (including, as applicable, the maintenance or measurement & verification services) in whole or in part for any reason prior to the end of the Guarantee Term, the Guaranteed Savings for the Guarantee Period in which such termination becomes effective will be prorated as of the effective date of such termination, with a reasonable adjustment for seasonal fluctuations, if any, in Energy and Operational Costs, and the Guaranteed Savings for all subsequent Guarantee Periods will be null and void. The Guarantee shall be defined in units of energy to be saved for the term of the SOW and specify unit costs to determine the anticipated cost savings on an annual basis for each Energy Savings Measure (ESM).

Definitions

When used in the SOW, the following capitalized words will have the meaning ascribed to them below:

"Annual Verification Report" is defined as the process and report for determining the Verified Savings in each Guarantee Period and reconciling it to the Guaranteed Savings in the same Guarantee Period.

"Baseline Period" is the period of time that defines the Baseline Usage and is representative of the Project Sites operations, consumption, and usage that is used as the benchmark for determining cost avoidance.

"Baseline Energy Use" is the energy usage of the Facilities prior to the implementation of the ESMs, as defined in Schedule B.

"Commencement Date" is the first day of the month following the date of execution of Exhibit A1, the Certificate of Acceptance of All Installed Equipment.

"Energy Costs" include the cost of electricity and fuels to operate HVAC equipment, mechanical and lighting systems, and energy management systems, and the cost of water and sewer usage, as applicable.

"ESM" is the Energy Saving Measure (ESM), which is the installation of equipment or systems, or modification of equipment or systems as described in Section C of the IGEA.

"Excess Verified Savings" is the amount of Verified Savings minus Guaranteed Savings in a Guarantee Period.

"Expected Savings" are the savings calculated based on the equipment installed during the Interim Period.

"Facilities" will mean those described in Section A of the IGEA.

- "First Guarantee Period" is defined as the period beginning on the Commencement Date and ending on the day prior to the first (1st) twelve-month anniversary thereof.
- "Guarantee Period" is defined as the First Guarantee Period and each of the successive twelve (12) month periods commencing on the anniversary of the commencement of the First Guarantee Period for the Guarantee Term.
- "Guaranteed Savings" is defined as the amount of avoided energy unit savings guaranteed to the City in each Guarantee Period. The Guaranteed Savings are set forth in Table A-2 and subject to adjustment in accordance with the terms of Schedule C.
- "IPMVP" will mean the International Performance Measurement and Verification Protocol 2012 and its Measurement and Verification Guidelines for energy savings performance contract projects. The IPMVP guidelines classify measurement & verification approaches as Option A, Option B, Option C, and Option D.
- "Measurement and Verification Plan" (M&V Plan) is defined as the plan providing details on how the Guaranteed Savings will be verified.
- "Operational Costs" will include the cost of operating and maintaining the Facilities, such as, but not limited to, the cost of inside and outside labor to repair and maintain Covered Systems and Equipment, the cost of custodial supplies, the cost of replacement parts, the cost of deferred maintenance, the cost of lamp and ballast disposal, and the cost of new capital equipment as defined for each ESM.
- "Post-Installation Report (PIR)" is defined as the process and report for determining the expected savings for the First Guarantee Period. QESP will submit the report to the City within 90 days following the execution of the Delivery and Acceptance Certificate.
- "Guarantee Term" will be 5 (five) years from the Commencement Date.
- "Verified Savings" is defined as the summation of avoided energy units for each Guarantee Period. These are determined by the Measurement & Verification Plan for the Project Sites in each Guarantee Period as a result of the ESMs.
- "Verified Energy Cost Savings" is the summation of avoided energy cost savings for each Guarantee Period as determined by the Measurement and Verification plan.

Table A-1 lists the Guarantee Period 1 ("Year 1") energy and cost savings that are expected to result from the ESMs to be installed by QESP.

Table A-1: Guarantee Annual Energy Unit Savings and Year 1 Anticipated Cost Savings

Total Year 1 Anticipated Cost Savings	\$344,408	\$127,455	\$43,149	\$29,038	\$621,167	\$47,528	\$79,239	\$93,420	\$27,543	\$13,115	\$69,948	\$153,827	\$27,863	0\$	\$1,677,700

Table A-2 lists the Guarantee Period anticipated cost savings that are expected to result from the ESMs to be installed by QESP.

Table A-2: Anticipated Cost Savings

Guarantee Period	Anticipated Total Savings
1	\$1,677,700
2	\$1,735,049
3	\$1,794,371
4	\$1,855,736
5	\$1,919,213

The Guaranteed Savings are subject to the terms included in Schedule C, including those described in the Savings Shortfalls and Guarantee Adjustment sections.

SCHEDULE B

Baseline Energy Consumption

This Schedule B describes the baseline from which the ESMs will be measured and the methodology for adjusting that baseline during the Guaranteed Period.

Baseline Energy Consumption

The QESP has established the baseline energy use for the purpose of measurement and verification of Verified Savings using following information:

- (1) The 36 months of baseline electric energy and natural gas utility bills for the baseline period beginning in January 2013 and ending in December of 2015; and
- (2) The heating and cooling degree days calculated from daily NOAA weather data collected at Hartford, CT for the same baseline period.

Energy consumption across the three years baseline period showed little variance, so, therefore, the three-year data set was averaged to determine baseline energy consumption.

Adjustments to the baseline energy use may be required throughout the Guarantee Period to account both for factors that change routinely, such as weather, and factors that did not vary significantly during baseline period, such as operating hours, building use, occupancy, and issues related to ongoing operation and maintenance of the ESMs and systems affected by the ESMs. If the baseline is adjusted during the Guarantee Term, the adjusted baseline will be used for calculating Verified Savings.

In developing the baseline, the QESP reviewed the baseline energy use against historical weather data. The review found that 30-year historical heating degree days were within 1% of the heating degree days associated with the baseline period. Therefore, no adjustment for weather has been included in the development of the baseline energy use. Adjustments to the baseline energy use have been made to three buildings, Crosby-Wallace Complex, Wilby-North End Complex, and West Side Middle School. These adjustments account for operational deficiencies associated with the HVAC systems in these buildings that will be corrected as part of the project. A description of these adjustments can be found later in this Schedule B, and the calculations can be found in IGEA *Appendix* 2.

Table B-1 provides the baseline energy use and adjustments for each facility.

1: Barnard School was closed in 2013 and most of 2014, and then reopened in the September 2014. Any utility consumption prior to September 2014 is not consistent with the current building operations; therefore, we are using January 2015 to December 2015 as the baseline. Notes:

2: Carrington School completed a building extension in 2013, which increased the building square footage from 45,916 to 127,391. Therefore, we are using January 2014 to December 2015 as the baseline to account for the consumption for the current square footage of the building.

3. Chase School has two electric meters with different rate structures, therefore, this electric baseline represents the combined average kWh consumption for both meters.

4: City Hall was recently renovated and reliable historic data was available for March 2015 to February 2016, therefore, we used this as the baseline.

5. Crosby-Wallace Complex historic electrical data was available for January 2014 to December 2015; therefore, we used this as the baseline.

6. Waterbury Career Academy opened in 2013; therefore, we are using January 2014 to December 2015 as the baseline.

7: During the course of our audit, NORESCO evaluated the existing conditions of the air handling equipment and its ability to operate properly, specifically to introduce the proper amount of ventilation required. In three schools, we noticed that many of the outside air damper assemblies were inoperable, which minimizes the resulting utility consumption and costs. Per the RFP, and based on our design due diligence, we recommend improvements to these schools to correct these existing system deficiencies. This requires an adjusted average project baseline energy consumption and associated cost to account for the increase in ventilation to meet Code requirements.

Table B-2 lists the heating and cooling degree days calculated from daily NOAA weather data collected at Hartford, CT for the baseline period.

Table B-2: Weather Data for the Baseline Period

Baseline Adjustment

NORESCO's data gathering process takes advantage of a very "hands-on" approach. During the energy audit of the facilities, our engineers and technicians spent a great deal of time examining building systems from top to bottom -- from studying the existing controls and sequences, to checking operations of pneumatic dampers and valve actuators, to collecting name plate data from motors and other pieces of equipment. Observations were made of actual operating conditions and the existing control systems in an effort to confirm the current operating sequences and schedules. The available facility blue prints were studied in great detail in order to fill in the gaps in our evaluation and achieve the most effective solution.

NORESCO made selective use of existing controls systems trending data and metering devices to establish the existing operating hours.

NORESCO interviewed facility staff to understand building operations. Extensive information was also gathered through numerous interviews with various building personnel. These included discussions with the facility operators and staff members on site. The accumulated data from these different sources allowed us to develop a very accurate picture of how the facility currently operates.

Based on this operational data gathering process, we observed some existing system deficiencies that reduce the baseline energy consumption and costs below what would be expected if the system was operating properly. Specifically, in Crosby-Wallace Complex, Wilby-North End Complex, and West Side Middle School, the outside air damper assemblies on air handling units were not operable, and therefore, minimized the mechanical ventilation to the

occupied spaces. As part of our baseline analysis, we modeled this in our savings calculations, as well as the resulting baseline adjustment associated with the heating and cooling energy consumption and costs to increase the amount of outside air required to meet Code requirements.

Table B-3 summarizes the baseline adjustment included at Crosby-Wallace Complex, Wilby-North End Complex, and West Side Middle School.

Table B-3: Baseline Adjustments

Total Adjusted Baseline Energy Cost	\$1,023,87 5	\$356,300	\$738,406	\$2,118,58

equipment deficiencies which accounts for the lack of outside air. The deficiencies consisted of rusted closed dampers, disconnected At each site, NORESCO personnel conducted a detailed inspection of the AHUs, specifically, the dampers. We documented various damper linkages, and disconnected damper actuators and controls. In addition to the physical inspections, we observed the EMS graphical screens which confirmed our site observations.

The adjusted outside air percentage was determined by a review of the original building mechanical design drawings and equipment schedules. Below are the AHU equipment schedules with a summary of the air flow CFMs, which were used to determine the baseline adjustments due to increased ventilation.

SCHEDULE C

Measurement & Verification Plan

This Schedule C describes the process for measuring and verifying Guaranteed Savings and the associated Verified Energy Cost Savings as well as information that the QESP will provide for the post-installation and annual M&V reporting. The methodology uses the 2012 revision of the International Performance Monitoring and Verification Protocol (IPMVP) as the basis of the savings calculation and verification methodology.

Savings Measurement and Verification Plan

QESP's M&V Plan provides proof of performance for each ESM and overall facility savings. Table C-1 includes the M&V summary plan for this project.

Table C-1: Measurement and Verification Plan Summary for Energy Savings Measures

Contractually Agreed Upon Variables	Fixture power, operating schedule, and HVAC system efficiency	Fixture kW and operating schedule	Weather data, building cooling loads, occupancy schedule, temperature set points, and cooling system efficiency	Weather data, building heating and cooling loads, occupancy schedule, temperature set points, and HVAC system efficiency
Performance Period M&V	For five years, visually inspect a sample of fixtures during the annual inspection to verify that proper replacements are being used and that the fixtures are operating as intended for duration of the contract. Survey maintenance stock and maintenance records to confirm that proper materials are being inventoried.	For five years, visually inspect a sample of the installed fixtures annually to verify that they are operating as intended. Survey maintenance stock and maintenance records to confirm that proper materials are being inventoried.	Inspect annually for five years to verify that chillers and pumps are operating as intended and capable of achieving expected energy savings.	Inspect annually for five years to verify that ESM is operating as intended and capable of achieving expected energy savings.
Post-Installation M&V	Measure fixture wattage of a statistically representative sample of each selected lampballast combination. Verified electric energy savings will reflect final as-built quantities and pre- and post- retrofit fixture wattage measurements. Post-retrofit operating hours will be based on agreed-upon occupancy hours.	Post-installation lighting kW will be based on manufacturer's specifications, and hours of operation consistent with baseline hours.	Post-Installation energy use based on manufacturer's specifications. Savings calculations based on baseline heating and cooling loads.	Post-Installation energy use based on manufacturer's specifications, and hours of operation consistent with baseline hours.
Baseline M&V	Establish facility lighting kW utilizing instantaneous kW measurements of a statistically representative sample of common lamp-ballast combinations, and established hours of operation through deployment of data loggers and via interviews with facility personnel.	Establish baseline based on manufacturer's specifications, and establish hours of operation through based on site observations and discussions with facility personnel. ESM 1: Interior Lighting Improvements & Controls

Savings Calculation Methodology

This ESM replaces existing lighting system components with new high-efficiency light emitting diode (LED) units. This ESM also installs controls to minimize lighting operating hours in selected areas where additional controls were determined to be effective.

QESP created a spreadsheet model using baseline fixture power measurements, measured operating and occupancy hours, and other pertinent information to determine the energy consumed by existing lighting systems in use at the various City premises. This spreadsheet model establishes baseline energy consumption for this ESM.

To calculate the proposed direct energy savings, fixtures were grouped by baseline lamp and ballast combination (LBC), post-installation LBC, and hours of operation. Energy savings calculations for this ESM used data from the following sources:

An on-site audit

Measured electric demand (kW) of a sample of the existing fixtures Industry standard lighting wattage tables showing standard consumption of the major Lighting-Ballast Combinations (LBCs)

Data loggers to determine operating and occupancy hours

Data provided by facility personnel (facility schedules)

Key parameters that affect baseline energy use include fixture energy use and operating hours. Building operating and occupant data was provided by City staff. If any of these parameters could not be determined from these sources, QESP estimated the parameter based on standard engineering practices and experience.

For each line item in the inventory, the verified electric demand and energy savings will be calculated using the following equations:

$$ES_{LIGHTING} = (P_{base} * N_{base} - P_{post} * N_{post}) * H_{base}$$

Where:

 $\mathsf{ES}_{\mathsf{lighting}} \quad = \quad \mathsf{Energy} \; \mathsf{savings}, \; \mathsf{in} \; \mathsf{kWh}, \; \mathsf{for} \; \mathsf{the} \; \mathsf{lighting} \; \mathsf{retrofits}.$

P_{base} = Electrical power, in kW, per luminaire for appropriate baseline LBC group.
P_{post} = Electrical power, in kW, per luminaire for appropriate post-installation LBC group.

H_{base} = Existing annual operating hours defined by luminaire's pre hours group.

N_{base} = Number of luminaires in representative baseline LBC group.

N_{post} = Number of luminaires in representative post-installation LBC group.

For each group of luminaires, we calculated the monthly demand savings as follows:

$$DS_{LIGHTING} \, = \, \left(P_{base} \, * \, N_{base} \, - \, P_{post} \, * \, N_{post} \right) * \, DF_{lighting}$$

Where:

DSighting = Monthly demand savings, in kW, for the lighting retrofits.

P_{base} = Electrical power, in kW, per luminaire for appropriate baseline LBC group.
 P_{post} = Electrical power, in kW, per luminaire for appropriate post-installation LBC group.
 DF_{lighting} = Hours group diversity factor, as a percentage in IGEA Appendix 1: Savings Calculations.

 N_{base} = Number of luminaires in representative baseline LBC group.

The results of these LBC calculations are summed for total kW and kWh savings. Cost savings are determined by multiplying the expected demand and energy savings by the approved incremental energy costs listed in Table 1-12. This calculation can be found in IGEA *Appendix 1: Savings Calculations*. Project savings by building are also included in IGEA *Appendix 1: Savings Calculations*.

Lighting Controls

To calculate the proposed lighting control savings, luminaires have been grouped with other luminaires sharing the same baseline LBC group, post-installation LBC group, and hours of operation. The baseline and post-installation operating hours by building for all lighting equipment is detailed in IGEA *Appendix 1: Savings Calculations*.

QESP based projected energy savings on the actual installed quantities of luminaires. For each group of luminaires, QESP calculated the energy savings during each time of use period as follows:

$$ES_{controls} = \{(P_{post} * H_{base}) - (P_{post} * H_{post})\} * N_{post}$$

Where:

 $ES_{controls}$ = Energy savings, in kWh, for the on/off controls.

P_{post} = Electrical power, in kW, per luminaire for appropriate post-installation LBC group

 H_{base} = Baseline annual operating hours defined by luminaire's pre-hours group

H_{post} = Post-Installation annual operating hours defined by luminaire's post hours group

 N_{post} = Number of luminaires in representative post-installation LBC group

The post-installation operating hours are based on reductions to the baseline operating hours determined via measurements, direction and input from the City, staff interviews, and on-site observations. For each group of luminaires in this ESM, QESP calculated the monthly demand savings for the lighting controls as follows:

Where:

DS_{controls} = Monthly demand savings, in kW for the lighting controls

P_{post} = Electrical power, in kW, per luminaire for appropriate post LBC group
DF_{controls} = Diversity factor; as a percentage in IGEA Appendix 1: Savings Calculations

 N_{post} = Number of luminaires in representative post-installation LBC group

Heating and Cooling Interaction

The proposed lighting upgrade reduces the wattage and hours of operation for lighting, which in turn produces less heat in the lighted areas. Since cooling systems have less heat to remove, less air conditioning energy is required.

The actual heat contributed to the cooling load varies by luminaire type (recessed, surface-mounted, suspended, open, or enclosed), air return (open plenum or ducted return), and the amount of exhausted air. To represent various lighting and ventilation systems, QESP assumes that, in conditioned spaces, electrically produced mechanical cooling removes an average of 90

percent of light-generated heat. Luminaires in unconditioned spaces, such as outdoor areas, stairways, mechanical rooms, and high-bay areas, have no effect on the mechanical cooling systems. Therefore, cooling savings calculations do not include these luminaires.

For each group of luminaires in conditioned spaces, QESP calculated the heating ventilating and air conditioning (HVAC) cooling energy savings during each time of use (TOU) period as follows:

$$ES_{Cooling} = \frac{ES_{lighting}*C_{energy}*(1-\%_{BHO})}{C_{capacity}} * EFF * UTIL_{Cooling}:$$
 Where:
$$ES_{cooling} = \text{Energy Savings, in kWh, for the HVAC cooling interaction} \\ ES_{lighting} = \text{Energy Savings, in kWh, for the lighting retrofits (from conditioned spaces only)} \\ \text{includes controls savings} \\ C_{energy} = \text{Conversion factor} = 3,413 \text{ Btu/kWh} \\ \%_{BHO} = \text{Percentage of the Building that is heating only} \\ C_{capacity} = \text{Conversion factor} = 12,000 \text{ Btu/ton-hr, cooling capacity} \\ EFF = \text{Mechanical cooling efficiency, in kW/ton, from IGEA } 1: Savings$$

$$UTIL_{Cooliing} = \text{Cooling Utilization, is the cooling season length in fractions of a year multiplied} \\ \text{90\%, from IGEA } Appendix 1: Savings Calculations}$$

QESP determined the contribution to peak demand savings by applying a diversity factor to the gross kW load. The LBC's hours group determines the demand diversity factor already applied to the demand savings for direct lighting and lighting controls. For each group of luminaires in conditioned spaces, QESP calculated the HVAC monthly demand savings as follows:

$$DS_{cooling} = \frac{\left(DS_{lighting} + DS_{controls}\right) * C_{energy} * HC}{C_{energy}} * EFF$$

```
Where:  DS_{cooling} = \\ DS_{cooling} = \\ DS_{iighting} = \\ DS_{controls} = \\ DS_{
```

In heating season, the reduction in heat from the lighting upgrades results in the need for increased mechanical heating. For each group of luminaires in conditioned spaces, QESP calculated the HVAC heating energy penalty during each TOU period as follows:

$$HP_{Cooling} = \frac{ES_{lighting} * C_{energy} * HC}{C_{MMBtu} * EFF * SEA_{heating}}$$
 Where:
$$HP_{cooling} = Heating penalty, in MMBtu, for the HVAC interaction Energy savings, in kWh, for the lighting retrofits (in conditioned spaces only) controls savings
$$C_{energy} = C_{onversion} factor = 3,413 \; Btu/kWh$$

$$C_{MMBtu} = C_{onversion} factor = 1,000,000 \; MMBtu/Btu$$

$$EFF = Mechanical heating efficiency, as a percentage, in IGEA Appendix 1: Savings$$

$$Calculations$$$$

SEA_{heating} = Heating season, in percent of year

To determine cost savings, QESP multiplied the energy and demand savings of all luminaire groups (minus the heating penalty) by the approved incremental energy costs.

M&V Activities During IGEA

QESP has performed fixture power measurements for a statistical sample of the baseline fixture types that represent approximately 76% of the total connected baseline lighting load. Measurements were performed at the fixture or circuit level. QESP used these measurements to determine the averaged fixture power for the existing lighting system. The measured average was applied to the specific LBCs in the line-by-line lighting audit in IGEA *Appendix 1: Savings Calculations*.

The baseline Measurement & Verification Sampling Plan and field notes are included in IGEA Appendix 4: Audit Data.

QESP also measured lighting operating hours for representative areas. We placed data loggers in representative spaces and used the data to determine the run hours for these spaces.

Post-Installation Period

Post-installation lighting fixture electrical use will be based on spot fixture wattage measurements taken on a statistically significant sample of different lighting-ballast combinations or lighting fixture types. Post-installation energy use will be based on the measurement results, the calculations described above, and the as-built conditions.

M&V Activities during the Performance Period

QESP will perform a visual inspection of a sample of fixtures on an annual basis for the Guarantee Term. QESP will also survey maintenance stock and maintenance records to confirm that the proper replacement equipment is being inventoried. All noted discrepancies and improper maintenance practices will be reported. Resolution of these deficiencies and the savings implications of such will be the responsibility of the City. No measurements will be performed in the performance phase. Verified Savings throughout the performance period will be based on the calculations described above and the results documented in the Post-Installation Report (PIR).

ESM 2: Exterior Lighting Improvements

Savings Calculation Methodology

This ESM optimizes the existing lighting systems by upgrading the current lighting with lower wattage LED fixtures. QESP proposes to achieve this by replacing exterior high intensity discharge (HID) recessed down-lights, as well as building-mounted and parking lot fixtures with new high-efficiency LED fixtures.

QESP created a spreadsheet model of the lighting system's baseline electrical use based on manufacturer's specifications, operating hours, and other pertinent information.

Energy savings calculations for this ESM used data from the following sources:

An on-site audit

Manufacturers' performance data

Operating hours based on site observations and interviews with facility personnel Key parameters that affect baseline energy use include fixture energy use and operating hours.

M&V Activities During IGEA

Pre-installation audits and site observations were used for establishing the baseline energy consumption in conjunction with manufacturer's specifications of the existing exterior fixtures. The hours of operation were determined from site observations and interviews with facility personnel.

Post-Installation Period

Post-installation energy use will be based on the commissioning of the new fixtures, as well as the calculations described above. The agreed-upon fixture wattages will be based on the manufacturer's specifications. QESP will inspect the fixtures to verify that they have been installed properly and are functioning as intended. If the equipment installed differs materially from the proposed strategies, then the models will be revised to reflect the equipment and strategies that were actually implemented. If the modification is directed by the City, it may also require changes to the Guaranteed Savings.

M&V Activities During the Performance Period

QESP will perform a visual inspection of a sample of fixtures on an annual basis for the Guarantee Term. QESP will also survey maintenance stock and maintenance records to confirm that the proper replacement materials are being inventoried. All noted discrepancies and improper maintenance practices will be reported. Resolution of these deficiencies and the savings implications of such will be the responsibility of the City. Verified Savings throughout the performance period will be based on the calculations described above and the results documented in the PIR.

ESM 3: Variable Speed Chillers & Pumps

Savings Calculation Methodology

QESP will replace the two existing water-cooled chillers at Crosby-Wallace complex with two new 250-ton units. The new integrated variable speed, water cooled, screw chillers will make use of the environmentally friendly refrigerant R-134A to reliably and efficiently cool the High School and Middle School buildings.

Installing new variable speed chillers will eliminate two aging chillers that use ozone-depleting refrigerant R-22, which is no longer produced. The new chillers will also reduce the complex's electrical consumption and utility costs while improving reliability and comfort. The City of Waterbury will also benefit from reduced labor requirements, lower maintenance costs, and reduced future equipment replacement costs.

QESP created a model to determine the building cooling load profiles. This model was used in conjunction with electric usage history, trended data, and usage times based on logger data and estimations, to calibrate the baseline models.

The spreadsheet cooling end use model used data from the following sources:

Building drawings (building areas, construction, and HVAC equipment capacities and other data)

Weather data from Hartford, CT.

Electric usage data from billing records

Equipment runtimes based on EMS trend data

Estimated existing equipment parameters and efficiency based on manufacturer's performance data.

Discussions with facility personnel (occupancy hours, setpoints, number of occupants, operating hours of equipment)

If any of these parameters could not be determined from these sources, QESP determined the most likely parameter based on standard engineering practices and experience.

Key parameters that affect baseline energy use include cooling system efficiency, weather, cooling loads, operating hours, and building material and insulation performance characteristics. Building operating and occupant data was provided by the City. Building construction and insulating values of components such as walls, roofs, and windows were obtained from construction drawing data.

M&V Activities During IGEA

Pre-installation audits and site observations were used for establishing the baseline cooling energy use in conjunction with manufacturer's specifications and nameplate data. Characteristics of baseline chiller equipment were utilized for the assumptions that went into the spreadsheet models with regards to cooling loads and operating hours.

Post-Installation Period

Post-installation energy consumption will be based on the commissioning of the equipment as well as the calculations described above. The post-retrofit energy usage will be taken from the manufacturer's specifications and nameplate data. QESP will inspect the chillers to verify that they have been installed properly and are functioning as intended. If the equipment installed differs materially from the proposed strategies, then the models will be revised to reflect the equipment and strategies that were actually implemented. If the modification is directed by the City, it may also require changes to the Guaranteed Savings.

M&V Activities During the Performance Period

The chillers, and associated equipment installed as a part of this ESM will be inspected annually for the Guarantee Term to verify that they are in place and operating as intended. No measurements will be performed. Any modification of the equipment, or changes from its intended function are the responsibility of the City. Deficiencies in the chillers' ability to perform will be noted by QESP in the Annual Verification Report (AVR) and corrective actions will be discussed with the City. Verified Savings will be based on the results documented in the PIR.

ESM 4: Air Handling Unit Damper Refurbishments

Savings Calculation Methodology

QESP proposes to refurbish seventy-six (76) air handling units (AHUs) in various City buildings. The scope of work will include installing thirty-four (34) new outdoor/return/exhaust air dampers

and refurbishing/rebuilding one hundred and forty-six (146) existing-to-remain outdoor/return/exhaust air dampers.

Refurbishing the AHUs at the City schools will reduce the ongoing maintenance burden on the City HVAC shop and improve temperature control and air quality of the schools while reducing energy costs. Through improved system technologies and efficiencies, the AHUs will provide more reliable and consistent comfort levels, improve indoor air quality, improve system performance under varying conditions, and reduce current maintenance and service costs.

QESP proposes to perform a thorough servicing of key components and install new replacement parts where selected on the existing AHU equipment to bring the units back to their original heating, cooling, and ventilating capacities and efficiencies. Extending the useful life of the equipment will avoid the need for a considerable capital investment in the AHUs and allows the City flexibility in prioritizing where to use scarce capital funds elsewhere.

QESP created a model to determine the building heating and cooling load profiles. This model was used in conjunction with electric and fuel usage history, and estimated equipment usage times, to calibrate the baseline models.

The spreadsheet heating and cooling use model used data from the following sources:

Building drawings (building areas, construction, and HVAC equipment capacities and other data)

Weather data from Hartford, CT

Electric usage data from billing records

Fuel usage from billing records.

Equipment runtimes based on trend logs and loggers installed on pre-retrofit units

Estimated existing equipment parameters and efficiency

Discussions with facility personnel (occupancy hours, setpoints, number of occupants, operating hours of equipment)

If any of these parameters could not be determined from these sources, QESP determined the most likely parameter based on standard engineering practices and experience.

Key parameters that affect baseline energy use include heating and cooling system efficiency, heating and cooling loads, weather, operating hours, and building material and insulation performance characteristics. Building operating and occupant data was provided by City staff. Building construction and insulating values of components such as walls, roofs, and windows were obtained from construction drawing data.

M&V Activities During IGEA

Pre-installation audits and site observations were used for establishing the baseline heating and cooling energy use in conjunction with manufacturer's specifications and nameplate data. Characteristics of baseline HVAC equipment were utilized for the assumptions that went into the spreadsheet models with regards to heating and cooling loads and operating hours.

Post-Installation Period

Post-installation energy consumption will be based on the commissioning of the AHU refurbishments as well as the calculations described above. If the equipment installed differs materially from the proposed strategies, then the models will be revised to reflect the equipment

and strategies that were actually implemented. If the modification is directed by the City, it may also require changes to the Guaranteed Savings.

M&V Activities During the Performance Period

QESP will conduct annual inspections during the Guarantee Term to confirm that the refurbished equipment is installed and operating as intended, and capable of achieving the expected savings. No measurements will be performed. Any modification of the equipment, or changes from its intended function are the responsibility of the City. Noted deficiencies in the AHUs ability to perform will be reported in the AVR and corrective actions will be discussed with the City. Verified Savings will be based on the results documented in the PIR.

ESM 5: Energy Management System Upgrades & Expansion

Savings Calculation Methodology

QESP proposes to install new, comprehensive web-accessible direct digital control (DDC) energy management systems and/or retro-commission the existing-to-remain control systems. The new electronic controls will automatically enable HVAC systems and modulate heating, cooling, and ventilation to maintain space temperature set points. Schedules will be set up in accordance with occupancy to reduce energy use during off hours. For retro-commissioning, QESP will evaluate the HVAC and controls systems and identify and correct existing deficiencies with the controls and sequences of operation.

New energy management systems (EMSs) in the Waterbury facilities will improve building occupant comfort, reduce energy costs, reduce maintenance costs, and provide increased monitoring, control, and trouble-shooting of building HVAC systems.

To form the strategies for the included facilities, computer models were developed for each city facility and the operation of the various HVAC systems was analyzed. These models were used to identify opportunities for controls improvements and to calculate energy savings. Several tables in the Investment Grade Energy Audit (IGEA) Report show a simplified version of the analysis for each of the affected systems at each building. These tables are the basis for determining the energy savings that will result from installing the energy management systems and the associated control strategies.

The savings from the EMS are not dependent upon the improved efficiency of new equipment; instead, the savings depend entirely on the software control strategies, the programmed setpoints and schedules, and the hardware that implements the control strategies. After the installation of the EMS, QESP will verify that the energy saving control sequences are operational and functioning as specified in the IGEA Report. Energy savings calculations are documented in the IGEA Appendix 1: Savings Calculations.

The parameters used to determine the baseline and post energy usage are:

Engineering weather data from Hartford, Connecticut

Occupied and unoccupied space temperature settings

Outside air lockout temperature for heating and cooling systems

Occupancy schedules for the equipment

Size of the buildings and the heating, ventilation, and cooling requirements

Equipment runtimes based on trend logs and loggers installed on pre-retrofit units Efficiency of heating and cooling equipment, including fan and pump motors Baseline motor power measurements

Capacity of the heating, ventilation, air distribution systems

M&V Activities During IGEA

Pre-installation audits, site observations, and logger data were used for establishing the baseline equipment runtimes. The pre-retrofit space temperatures and setpoints were based on the current EMS setpoints. Characteristics of baseline HVAC equipment, including equipment efficiency, were taken from nameplate data, in conjunction with motor power measurements, to confirm the assumptions that went into the spreadsheet models with regards to heating and cooling loads.

Post-Installation Period

Post-installation energy consumption will be based on the model described above updated to reflect the agreed-upon set points, schedules, and sequences located in the IGEA Report, Section C, ESM 5. During the commissioning phase, QESP will verify occupied and unoccupied schedule settings and temperature setpoints. EMS hardware and associated controls will be commissioned and the software will be programmed to insure proper operation. If the equipment installed or strategies implemented differ materially from the proposed strategies, then the models will be revised to reflect the equipment and strategies that were actually implemented. If the modification is directed by the City, it may also require changes to the Guaranteed Savings.

M&V Activities During the Performance Period

During the Guarantee Term, QESP will analyze trended data from the upgraded EMSs at several of the City schools to evaluate the performance of the implemented schedules, setpoints, and control strategies at those facilities. QESP's trend reviews will focus primarily on units and strategies that represent the majority of the EMS-related cost savings. QESP will also review the units with smaller amounts of savings, but will do so on a rotating basis given their smaller impact on overall project performance.

For the Guarantee Term, QESP will perform quarterly reviews of EMS trends and will submit a quarterly report to the City. During these trend reviews, QESP will verify that the installed strategies and setpoints remain in place. Noted changes to building schedules, occupancy hours, or setback and setup temperatures are the responsibility of the City. QESP will note these changes when found and inform the City. On-site inspection of a sample of the installed EMS components will also be performed annually for the Guarantee Term.

The AVR will include information on the results of the trend reviews and site inspection. If changes to the energy strategies have been made that have the potential to negatively impact savings, corrective actions will be discussed with the City. Since any changes are outside of QESP's control, these modifications will not result in adjustments to the post-installation energy consumption model. Energy savings shown in the AVR will be based on results documented in the PIR.

Some of the key parameters that will be trended include:

Boiler status

- Temperature setpoints during occupied and unoccupied hours
- Fan runtimes
- Fan speed
- Outside air damper positions
- Space CO₂ concentrations
- Supply air temperatures
- Mixed air temperatures
- Return air temperatures
- Outside air temperatures

The list of parameters shown is not meant to be all-inclusive. Additional trending will be performed as appropriate to document savings. Monitoring of these systems will require QESP to access these systems both on-site and remotely. Maintenance of the trends and the agreed-upon communications pathway are the responsibilities of the City for the term of the contract. The ability to perform the trend review will be contingent on the City maintaining the trend logs that QESP will set up during the implementation phase of the project, and allowing QESP access to the data from the EMS. If the City fails to maintain the trends or to allow NORESCO's access thereto, the performance period M&V will be limited to the annual inspections.

ESM 6: Building Weatherization

Savings Calculation Methodology

QESP will reduce infiltration by sealing cracks with foam or beads of caulk as needed, improving door seals, replacing worn sweeps and weatherization strips on doors, making roof-to-wall joint gaps airtight and sealing exterior shell penetrations. Where cost-effective, QESP proposes to install blown-in cellulose in building attic spaces. Sealing these penetrations will improve thermal performance and reduce infiltration of outside air into the buildings, which will improve occupant comfort and reduce energy consumption. Baseline energy consumption for existing insulation and weather stripping components were calculated using a spreadsheet model based on engineering values of the materials and standard heat transfer formulas.

The overall savings for this ESM are the difference between the pre-installation and post-installation energy losses. These savings calculations are further detailed in the IGEA Appendix 1: Savings Calculations.

M&V Activities During IGEA

During the IGEA, room space temperatures, occupancy schedules and set points were obtained from EMS trend logs and interviews with facility staff. Site observations provided additional information for use in a calculation spreadsheet. Building construction materials and weather data were also used to determine how much energy was being lost through the inefficient building construction materials in the pre-retrofit condition.

Post-Installation Period

The post-retrofit energy use for the upgraded area will be calculated based upon the baseline spreadsheet model updated to reflect the installation of the upgraded weatherization materials.

QESP will perform an inspection of the weatherization materials to confirm that it is installed where proposed.

M&V Activities During the Performance Period

The materials installed as part of this measure will be inspected annually for the Guarantee Term to verify that they are in good condition and capable of achieving the expected savings. No other measurements will be performed. Any noted deficiencies or deviations from the intended function of the equipment discovered during the inspection will be reported to the City in the AVR. Verified Savings will be based on the results documented in the PIR.

ESM 7: Pipe & Fitting Insulation

Savings Calculation Methodology

QESP will insulate exposed steam and hot water heating system piping in the boiler rooms of the City's buildings with new fiberglass blanket insulation. Associated ancillaries such as valves, flanges, fittings, and other equipment will be insulated with removable jacket insulation. The new insulation will greatly reduce the thermal losses associated with the steam and hot water piping systems. A reduction in thermal losses will lower the demand on the heating systems in the associated buildings, reducing fuel consumption and utility costs. Insulating bare steam equipment will also make these buildings safer for students and staff.

QESP used a publicly available software application (3EPlus) model to calculate pipe equipment heating load profiles. The model was used in conjunction with fuel usage history, weather data, size and surface area of equipment, fittings, and pipe, and construction materials to calculate the baseline and post-retrofit energy losses.

M&V Activities During IGEA

QESP examined building drawings, performed visual inspections, to determine the baseline heating and cooling system use, surface area fittings and equipment, and measured length of pipe to be used in the spreadsheet model.

Post-Installation Period

QESP will review insulation specifications to confirm that the insulation R-Value meets the proposed value. QESP will perform an inspection of the insulation to confirm insulation is installed where proposed.

M&V Activities During the Performance Period

The insulation installed as part of this measure will be inspected annually for the Guarantee Term to verify that it remains in place and is capable of achieving the expected savings. No other measurements will be performed. Any deficiencies discovered during the inspection will be reported to the City in the AVR. Verified Savings will be based on the results documented in the PIR.

ESM 8: Steam Traps & Thermostatic Radiator Valves

Savings Calculation Methodology

A comprehensive steam trap audit was performed which identified failed and misapplied traps. This ESM will replace or repair approximately 262 traps to generate energy savings and prolong the service life of equipment served by the steam system. Traps that leak result in thermal losses, and can cause water hammer, corrosion, and damage to heat transfer equipment. By repairing or replacing faulty steam traps with new, properly functioning traps comfort conditions in these buildings will be improved and thermal energy savings will be achieved.

QESP utilized a spreadsheet calculation based on Grashof's formula for steam flow through an orifice to calculate the baseline and post-installation energy consumption for the steam trap portion of this ESM. This spreadsheet uses key parameters such as steam pressure, orifice size, and annual hours of operation to determine the amount of steam lost through a steam trap that is failed in the open position. Summing the losses from each of the failed traps included in this ESM yields the baseline energy consumption for this ESM.

Pre- and post-retrofit steam, or thermal, losses are calculated using the formula as its basis:

$$q = h \times I \times g$$

Where:

Thermal Heat Loss (lb steam)

= Operating Hours (hrs) = Failure Rate (%) h

Grashof Number (dimensionless)

Major assumptions for the use of this formula are that the orifices have well-rounded edges and the backpressure is less than the critical flow pressure. The overall annual flow is determined by multiplying the calculated hourly mass flow rate by the annual trap operating hours.

The post-installation energy consumption is calculated in the same manner, but this calculation assumes that only a small fraction of the traps fail between inspections. The difference between the baseline and post-installation steam trap losses equals the steam trap savings.

A comprehensive steam radiator/convector control valve audit was performed which identified their existing control configurations. This ESM will install approximately 812 thermostatic radiator valves (TRVs) to automatically control the steam equipment's heat output to generate energy savings as well as significantly improve the comfort conditions in the spaces served. The installation of these temperature control valves will also include the removal of existing obsolete and problematic pneumatic valves and thermostats, resulting in additional maintenance cost savings as well as the energy savings associated with running the building air compressors.

For energy savings associated with the thermostatic radiator valves, NORESCO uses site specific parameters and the following formula to calculate steam energy loss through the existing failed control valves.

```
• q = A \times P \times H \times I \times FR \times h / (103,000 \text{ Btu/CCF} \times \text{System efficiency})
```

Where:

q = Thermal Heat Loss (lb steam)

A = Average radiator area (sq. in.)

P = Steam Rate (lbs/hr)H = Annual Heating Hours

I = Idle Time (estimated new radiator valves let steam into radiators and convectors XX% of the time)

FR = Failure Rate (estimated existing radiator valve failure rate)

h = Energy Content (Btu) in 1 lb of steam

M&V Activities During IGEA

QESP performed a pre-installation audit to identify failed and misapplied traps, and control valve configurations. Key parameters that affect baseline energy use is the number of traps failed open, the sizes, pressures, and annual operating hours of these traps. For the TRVs, key parameters are the number of valves failed open, sizes, pressures, and annual operating hours for the valves.

Post-Installation Period

QESP will inspect the new traps and TRVs after installation is complete to verify that the equipment are in place and operating as intended. The results of the inspection will be documented and provided to the City.

M&V Activities During the Performance Period

A sample of steam traps and thermostatic radiator valves installed as part of this measure will be visually inspected annually during the Guarantee Term and maintenance and operations will be discussed with City personnel. No measurements will be performed. Any deficiencies discovered during the inspection will be reported to the City in the AVR. Verified Savings will be based on the results documented in the PIR.

ESM 9: Plug Load Controls

Savings Calculation Methodology

QESP will install plug load management technology to provide energy savings during unoccupied hours and weekends. The installation includes controllable electrical receptacles, building controllers, and web-based application and software suite for programming, analytics, reporting, with a visual dashboard.

QESP will implement smart power receptacles that remove the need to unplug from the wall when office equipment is not in use. The system uses a cloud-based software application to control whether the new smart receptacles will allow electrical power to be provided to the plugged in device, as well as measure the power being used. The web-based software will communicate with the smart receptacles via building controllers and either the existing LAN infrastructure and Wifi or Power Line modem in the buildings. The deployment of the equipment will be dependent upon the function, use, and occupant base of the buildings.

QESP created a spreadsheet model to determine the energy consumption of printers, copiers, vending machines, and other electrical equipment. This model was used in conjunction with manufacturer's ratings, and pre/post-retrofit hours of operation to calibrate the baseline model.

M&V Activities During IGEA

Pre-installation audits and site observations were used to establish the baseline energy consumption in conjunction with manufacturer's ratings of the existing electrical equipment and agreed-upon pre-retrofit hours of operation.

Post-Installation Period

Post-installation energy consumption will be based on the commissioning of the power management software installation as well as the calculations described above. QESP will inspect the head end software to verify that the software has been installed properly and is functioning as intended. If the equipment installed differs materially from the proposed strategies, then the models will be revised to reflect the equipment and strategies that were actually implemented. If the modification is directed by the City, it may also require adjustments to the Guaranteed Savings.

M&V Activities During the Performance Period

QESP will conduct annual inspections on a sample of the installed equipment during the Guarantee Term to confirm that the smart power receptacles and new software remain installed and operate as intended. No measurements will be performed. Any modification of the equipment, or changes from its intended function are the responsibility of the City. Deficiencies in the software's ability to perform will be noted by QESP in the AVR and corrective actions will be discussed with the City. Verified Savings will be based on the results documented in the PIR.

ESM 10: Walk-in Cooler Controls

Savings Calculation Methodology

QESP will install new controls on the cooling systems of existing walk-in refrigeration and freezer units in the City's kitchens. The controls and equipment will optimize evaporator fan, door heater, compressor, and condensing unit operation. Improving the efficiency of the walk-in coolers and freezers will decrease energy consumption and increase reliability through reduced equipment runtime.

The controls will monitor the load in the walk-ins and regulate the operation of the evaporator fans and condensing units to match the load. Evaporator fans will no longer operate continuously, nor will the door heaters, which will be controlled, based on the dew point temperatures in the surrounding storerooms. The controls also incorporate improved strategies for defrost cycles that will further reduce the energy consumption associated with the walk-in units.

QESP will also replace the fractional horsepower evaporator and condenser fan motors with high efficient electronically commutated motors. These new motors have a more efficient design that results in less energy consumption to operate, as well as emitting less waste heat to the space while they are running which also reduces cooling energy.

The savings from the walk-in refrigeration controls are dependent upon the improved efficiency of new equipment, software control strategies, the various setpoints, and the hardware that implements the control strategies. After the installation of the controls, QESP will verify that the energy saving control sequences are operational and functioning as specified in the IGEA

Report. As long as these implemented control sequences are maintained and not altered, the calculated savings will occur. Energy savings calculations are documented in the IGEA Appendix 1: Savings Calculations.

The parameters used to determine the baseline and post energy usage are:

Walk-in refrigerator temperature settings

Occupancy / kitchen schedule for seven days

Nameplate power ratings and efficiencies of refrigeration equipment, including fan motors M&V Activities During IGEA

Baseline audits and site observations were used for establishing the baseline cooling system energy use. Characteristics of baseline cooler equipment including physical condition of existing equipment and manufacturer's performance ratings were taken to confirm the assumptions that went into the spreadsheet models with regards to cooling loads.

Post-Installation Period

Post-installation energy consumption will be based on the model described above updated for the post-implementation design conditions. If the equipment installed differs materially from the proposed equipment, then the models may be revised to reflect the equipment that was actually implemented. If the modification is directed by the City, it may also require an adjustment to the Guaranteed Savings. During the commissioning phase, QESP will verify control settings and temperature setpoints and walk-in refrigeration system controls hardware will be commissioned to ensure proper operation.

M&V Activities During the Performance Period

The equipment installed as part of this measure will be inspected annually for the Guarantee Term to verify that it is in good condition and capable of achieving the expected savings. No measurements will be performed. Any noted deficiencies or deviations from the intended function of the equipment discovered during the inspection will be reported to the City in the AVR. Verified Savings will be based on the results documented in the PIR.

ESM 11: Steam Boilers

Savings Calculation Methodology

QESP proposes to install new steam boilers and ancillary heating system equipment. QESP will modernize the boiler systems in multiple Waterbury buildings. In the elementary schools heated by steam boilers that are past their useful life, the boilers will be replaced with new steam boilers that will improve the heating reliability and reduce the maintenance costs to the City. Control of the new boilers will be handled through the EMS and provide visibility of the buildings' heating plants to the City HVAC shop. The new heating systems will significantly reduce natural gas consumption due to higher seasonal operating efficiencies.

QESP created a model to determine the building heating load profiles. This model was used in conjunction with electric and fuel usage history, and estimated equipment usage times, to calibrate the baseline models.

The spreadsheet heating use model used data from the following sources:

- Building drawings (building areas, construction, and HVAC equipment capacities and other data)
- Weather data from Hartford, Connecticut
- Fuel usage from billing records
- Equipment runtimes, setpoints, and schedules from EMS trendlogs
- As-built equipment schedules
- Measured combustion efficiency
- Discussions with facility personnel (occupancy hours, setpoints, number of occupants, operating hours of equipment)

If any of these parameters could not be determined from these sources, QESP determined the most likely parameter based on standard engineering practices and experience.

Key parameters that affect baseline energy use include heating system efficiency, weather, heating loads, operating hours, and building construction and insulating values. Building operating and occupant data was provided by the City. Building construction and insulating values of components such as walls, roofs, and windows were obtained from construction drawing data.

M&V Activities During IGEA

Pre-installation audits and site observations were used for establishing the baseline heating energy use in conjunction with measured combustion efficiency, manufacturer's specifications and nameplate data. Characteristics of pre-retrofit equipment were utilized for the assumptions that went into the spreadsheet models with regards to heating loads and operating hours.

Post-Installation Period

Post-installation energy consumption will be based on the commissioning of the equipment as well as the calculations described above. The post-retrofit boiler combustion efficiency will be taken from stack gas testing at full load as part of commissioning. If the stack gas test results are within 2% of expected efficiency, allowing for variability from radiation and convection losses not captured during stack testing, the savings for the ESM will be verified so that no adjustment will be required. If the stack test results fall outside of plus or minus 2% of the expected efficiency, adjustments will be made to the savings.

QESP will inspect the boilers to verify that they have been installed properly and are functioning as intended. If the equipment installed differs materially from the proposed strategies, then the models will be revised to reflect the equipment and strategies that were actually implemented. If the modification is directed by the City, it may also require adjustment to the Guaranteed Savings and associated anticipated cost savings.

M&V Activities During the Performance Period

The equipment installed as part of this measure will be inspected annually for the Guarantee Term to verify that they are in good condition and capable of achieving the expected savings. Also during the Guarantee Term, QESP will perform stack gas tests on an annual basis to confirm the proper operation of the boilers. The results of the stack gas test will be used to verify that the boilers are operating as intended, and will not be used to calculate the Verified Savings.

Verified Savings will be based on the results documented in the PIR. Any deficiencies or deviations from the intended function of the equipment discovered during the inspection will be reported to the City in the AVR.

ESM 12: Hot Water Boilers & Pool Heating Systems

Savings Calculation Methodology

QESP proposes to install new natural-gas fired hot water boilers and ancillary heating system equipment. QESP will modernize the boiler systems in multiple Waterbury buildings. Heating systems in the middle/high school complexes will be redesigned to allow high-efficiency condensing boilers to be incorporated with new steam boilers to provide equipment redundancy. The boilers will be a combination of high-efficiency condensing hot water boilers and steam boilers with high-efficiency natural gas burners and combustion controls. This new equipment will serve the building space, domestic, and pool heating loads. Control of the new boilers will be handled through the EMS and provide visibility of the buildings' heating plants to the City HVAC shop.

New boilers will increase the heating system reliability by replacing equipment that is past its useful life and provide redundancy in cases where the backup boiler has failed. New boilers have a smaller footprint than the existing boilers and will increase space in the mechanical rooms for more efficient equipment servicing. The new heating systems will significantly reduce natural gas consumption due to higher seasonal operating efficiencies. At the middle/high school complexes, the steam boilers will no longer need to operate year round, thus extending their operating life as well as creating extended periods to perform routine preventative maintenance.

QESP created a model to determine the building heating load profiles. This model was used in conjunction with electric and fuel usage history, and estimated equipment usage times, to calibrate the baseline models.

The spreadsheet heating use model used data from the following sources:

- Building drawings (building areas, construction, and HVAC equipment capacities and other data)
- Weather data from Hartford, Connecticut
- Fuel usage from billing records
- Equipment runtimes, setpoints, and schedules from EMS trend logs
- As-built equipment schedules
- Measured combustion efficiency
- Discussions with facility personnel (occupancy hours, setpoints, number of occupants, operating hours of equipment)

If any of these parameters could not be determined from these sources, QESP determined the most likely parameter based on standard engineering practices and experience.

Key parameters that affect baseline energy use include heating system efficiency, heating loads, weather, operating hours, and building construction and insulating values. Building operating and occupant data was provided by the City. Building construction and insulating

values of components such as walls, roofs, and windows were obtained from construction drawing data.

M&V Activities During IGEA

Pre-installation audits and site observations were used for establishing the baseline heating energy use in conjunction with measured combustion efficiency, manufacturer's specifications and nameplate data. Characteristics of pre-retrofit equipment were utilized for the assumptions that went into the spreadsheet models with regards to heating loads and operating hours.

Post-Installation Period

Post-installation energy consumption will be based on the commissioning of the equipment as well as the calculations described above. The post-retrofit boiler combustion efficiency will be taken from stack gas testing at full load as part of commissioning. If the stack gas test results are within 2% of expected efficiency, allowing for variability from radiation and convection losses not captured during stack testing, the savings for the ESM will be verified so that no adjustment will be required. If the stack test results fall outside of plus or minus 2% of the expected efficiency, adjustments will be made to the savings.

QESP will inspect the boilers to verify that they have been installed properly and are functioning as intended. If the equipment installed differs materially from the proposed strategies, then the models will be revised to reflect the equipment and strategies that were actually implemented. If the modification is directed by the City, it may also require adjustment to the Guaranteed Savings.

M&V Activities During the Performance Period

The equipment installed as part of this measure will be inspected annually for the f Guarantee Term to verify that they are in good condition and capable of achieving the expected savings. Also during the Guarantee Term, QESP will perform stack gas tests on an annual basis to confirm the proper operation of the boilers. The results of the stack gas test will be used to verify that the boilers are operating as intended, and will not be used to calculate the Verified Savings. Verified Savings will be based on the results documented in the PIR. Any deficiencies or deviations from the intended function of the equipment discovered during the inspection will be reported to the City in the AVR.

ESM 13: Solar Photovoltaics

Savings Calculation Methodology

QESP proposes to install new solar photovoltaic systems at two City-owned buildings, the Duggan school and the Waterbury Police Department Headquarters. The PV systems include solar panels, racks, mounts, inverters, disconnects, and cabling, wiring, and controls. PV will generate electricity from a renewable resource and offset a portion of the purchased electric consumption and peak demand.

The energy savings associated with this ESM is based on the normalized results of ongoing metered system output. QESP calculated the expected output of the array, net of the array and inverter losses, using PVWatts, a software tool developed by the National Renewable Energy Laboratory (NREL). PVWatts calculates the monthly and annual expected output of the PV

system based on parameters such as location, azimuth, tilt angle, and long-term historical weather data. It also accounts for PV array losses, inverter losses, and other miscellaneous power conditioning losses.

The key assumptions used in the calculations, along with their sources, are listed below.

- PV module performance and inverter efficiencies are based on typical manufacturer's data
- The energy savings calculations use long-term solar irradiance and weather data interpolated from nearby weather stations in PVWatts

The equation used to determine the net output of the array is as follows:

```
E_{AC} = (H_t) (A_P) (h_P) (1 - L_P) (1 - L_C) (h_{inv})
Where:
E_{AC} = Net \ electric \ power \ produced \ (W-AC)
H_t = Solar \ irradiance \ in \ the \ plane \ of \ the \ PV \ array \ (W/m^2)
A_P = Area \ of \ the \ PV \ array \ (m^2)
h_p = Average \ efficiency \ of \ PV \ array \ (%)
L_P = Miscellaneous \ PV \ array \ losses \ (%)
L_C = Other \ power \ conditioning \ losses \ (%)
Inverter \ efficiency \ (%)
```

Measurements will be taken for power output at the array, along with ambient temperature and solar irradiance. This data will be used to normalize the post-acceptance system performance to standard test conditions (STC) to calculate the Verified Savings.

M&V Activities During IGEA

At present, the PV array is not installed and therefore the baseline is the current amount of electricity used by the facility.

The baseline development for this ESM included two key analyses: documentation that the facility's annual electricity baseline demand was consistently greater than the rated PV system output, and analysis of the electrical utility rates. The baseline is equal to the amount of purchased electricity before the installation of the new PV array.

Post-Installation Period

The variables affecting the post-installation energy use include the solar insolation on the PV array, PV cell temperature, the PV array efficiency, and the DC to AC conversion efficiency. The key system performance factor is the amount of electricity generated by the PV array.

QESP will inspect the PV system and power distribution equipment to verify that they have been installed properly and are functioning as intended. If the equipment installed differs materially from the proposed strategies, then the models will be revised to reflect the equipment and strategies that were actually implemented. If the modification is directed by the City, it may also require adjustments to the Guaranteed Savings.

The PV system AC output, solar insolation, cell temperature and ambient temperature will be measured for a minimum of two weeks. The measured data will be used to normalize the system performance to STC: 1,000 W/m² plane-of-array irradiance and 25°C cell temperature. The results will then be used in the PVWatts program to verify the proposed savings. The measured data will be normalized with the following equation:

$$P_{ACSTC} = P_{AC} \cdot \left(\frac{Irr_{STC}}{Irr}\right) / \left(1 - \left(T_{Cell} - 25\right) \cdot T_{co-eff}\right)$$

Where:

PACSTC = Power Output at STC (W-AC)
PAC = Power Output Measured (W-AC)
IrrsTC = Solar Irradiance at STC (1,000 W/m2)
Irr = Solar Irradiance Measured (W/m²)

T_{cell} = Cell Temperature, Measured or Calculated (°C)

T_{co-eff} = Temperature co-efficient of cell (approximately 0.45% / °C)

If measured cell temperatures are not available, the nominal operating cell temperature (NOCT) can be used with the following equation. NOCT is defined as the cell temperature under 800 W/m² plane-of-array irradiance, an ambient temperature of 20°C, and a wind speed of <1 m/s.

$$T_{Cell} = T_{Ambient} \times \frac{NOCT - 20}{0.8} \times Irr$$

Where:

 $T_{Ambient} = Ambient temperature measured (°C)$

NOCT = Nominal Operating Cell Temperature (approximately 45°C)

Only those measurements associated with irradiance greater than or equal to 800 W/m² will be used for the normalization and erroneous data will be discarded.

If the post-installation P_{ACSTC} is equal to or greater than the proposed P_{ACSTC} , the post-installation performance will be verified and the installed PV system would have the potential to meet or exceed the Guaranteed Savings. If the post-installation P_{ACSTC} is less than the proposed P_{ACSTC} , QESP will investigate the cause, and attempt to remedy the condition. The expected savings will be recalculated based on the post-installation P_{ACSTC} . The expected savings will be documented in the PIR.

M&V Activities During the Performance Period

During the first five (5) years of the Guarantee Term, Verified Savings will be based on the metered electric output (kWh) of the PV systems, normalized to STC, to account for typical annual fluctuations in ambient temperature and solar irradiance. A true RMS power meter will record system electric output throughout the performance phase. Permanently installed instrumentation will record ambient temperature and plane-of-array irradiance. The metered system kWh production will be normalized to STC based on the measured temperature and irradiance data.

QESP will perform periodic system inspections and will review the systems' output on a quarterly basis to verify that they continue to operate as intended and to evaluate the City's ongoing maintenance of the systems. The City is responsible for all ongoing tasks related to system operation, maintenance, repair, and replacement (OMR&R) including, but not limited to, cleaning of the PV panels, resetting tripped inverters, replacing failed inverters, and repair of damaged or failed systems components. If the City's failure to perform the manufacturers' suggested OMR&R results in system failure or degraded system performance, QESP will

exclude from its analysis the data from such periods and will instead use the post-installation data to calculate the Verified Savings until such time that proper system operation is restored. QESP will notify of noted deficiencies so that the City may promptly return the system's to their proper working order.

ESM 14: New Electrical Switchgear & Backup Power Generation

There are no energy savings associated with this measure and therefore no M&V Plan.

Table C-2: Risk Responsibility and Performance Matrix

CLARIFICATION OF KEY M&V VARIABLES	QESP's APPROAGH
1. Financial	
a. Interest Rates: The timing of the SOW signing may impact the available interest rate and project cost. Describe all of the particulars concerning the interest rate and specify time period for which the interest rate is valid.	A project cash flow using representative interest rates at the time of SOW execution is in Schedule H, Final Project Cost and Project Cash Flow Analysis. QESP makes no representations or guarantees with regard to the interest rate or repayment terms that the City will have with their source of financing.
b. Construction Costs: The QESP is responsible for determining construction costs and defining a budget for cost-effective ESMs, which may change during project development. Clarify design standards and the design approval process (including changes) and how costs will be reviewed.	The SOW Sum is based on sufficient design detail and Interim Period planning to mitigate risk of cost overruns. Design standards used are in accordance with the Connecticut state building codes. Following signature of the Notice to Proceed in Schedule S, final designs will be developed and provided to the City for review and approval at the start of the Interim Period. This is a firm fixed price contract and, provided there are no changes in scope, there will be no change in SOW Sum after execution of the SOW. The SOW Sum is based on the City providing Project Site access based on City approved contractor security badging for unescorted access to all work areas for QESP work as outlined in Article 6 of the SOW. If access is not provided as outlined, additional costs will be required and will be the responsibility of the City. The SOW Sum in Schedule H, Final Project Cost and Project Cash Flow Analysis, will be valid for 90 days from the submission of the Schedule. If SOW signature is delayed beyond this time, QESP reserves the right to reevaluate the price or withdraw the SOW, as the firm quotes for materials and services may expire before QESP purchase orders can be generated. QESP has included a Hazardous Materials Abatement Allowance as described in Schedule I. The City is responsible for any hazardous materials testing and abatement that exceeds the amount of the allowance.
c. M&V Verification: The City will determine the degree of verification required for the M&V program and energy savings determinations prior to QESP's submission of final SOW. Clarify how energy savings will be verified (e.g., Equipment performance, operational factors, energy use) and the impact on M&V costs.	Refer to material above in this Schedule for M&V details.
d. Operation and Maintenance Cost Savings: The project may include savings from recurring costs (based on actual spending reductions) and/or one-time future replacement expenditures (e.g., capital expenditures that were appropriated for future replacement of Equipment but will no longer be necessary). Clarify sources of operation and maintenance cost savings and how they will be verified.	Refer to Section C of the IGEA.

CLARIFICATION OF KEY M&V VARIABLES	QESP's APPROACH
e. Delays: Clarify schedule and how the cost of delays will be addressed.	A detailed project schedule will be created and agreed upon with the City prior to the Interim Period. City delays and associated costs from this schedule are the responsibility of the City. QESP will work in collaboration with the City and make best efforts to mitigate any City delays to the greatest extent possible. However, no cost or time has been included in our QESP's SOW Sum to account for delays caused by the City, their subcontractors or other parties or conditions or events not under the control of QESP. To avoid potential delays, careful implementation planning will begin after execution of the SOW Award and will be finalized before the construction notice to proceed is issued.
f. Major Changes in Facility: Clarify the City's and QESP's responsibilities in the event of a premature facility closure, loss of funding, or other major change in facility use and the impact on M&V.	QESP has no control over major changes at the City Project Sites or future closure plans. Therefore, the City has responsibility for changes in the use of the Project Sites, including reduction and/or closure. The SOW provides for early termination should it become necessary or desirable. In the unlikely event that changes are so significant that they impact project economics, the City can exercise its option to terminate. Alternatively, and at the request of the City, QESP can review alternative contractual modification options. Any major changes will require analysis of adjustments that will impact future consumption and verified savings. The City must provide written notice of planned changes to the QESP at least 120 days in advance of any major changes to the facility, and provide QESP with the opportunity to implement additional data collection required to quantify the impact of the major changes on the ESMs and make the necessary adjustments to the energy use and savings. The City will be responsible for the cost of additional analysis required to quantify the impact of major changes in the facility.
2. Operational	
a. Operating Hours: Clarify whether operating hours are to be measured or stipulated and what the impact will be if they change. If the operating hours are stipulated, the baseline should be carefully documented and agreed to by both parties.	Baseline operating hours were determined from input from City staff, IGEA inspections, and IGEA pre-measurement of equipment using data loggers to determine normal operating patterns. Since the Project Sites operate on a routine schedule, these agreed upon operating hours are used to establish the baseline. Because QESP cannot control the City mission, any changes reported will be reviewed for impact on consumption and may be applied as adjustments when calculating annual verified savings.
b. Load: Clarify whether Equipment loads are to be measured or stipulated and what the impact will be if they change. If the Equipment loads are stipulated, the baseline should be carefully documented and agreed to by both parties.	Baseline loads have been developed for the savings analysis using data provided by City as well as detailed site data collected. QESP has analyzed loads and system operating patterns to determine the optimum operating profile for baseline conditions. Since QESP cannot control City mission, the City will provide, in writing a summary of changes in the loads in buildings. These changes include, but are not limited to, the following: • Addition, renovation or demolition of buildings served by these meters • Significant changes in functional use of the buildings, • Adding or removing equipment in the buildings

CLARIFICATION OF KEY M&V VARIABLES	QESP's APPROAGH
c. Weather: Clearly specify how weather fluctuations will be addressed in M&V.	Any changes reported will be reviewed for impact on consumption and may be applied as an adjustment when calculating annual verified savings. Weather affected savings calculations are based on long-term 30 year weather data, and the baseline data reflects the long-term historical average. Savings may be normalized to long term average weather conditions if the actual weather conditions, as measured by heating and cooling degree days, deviate by more than 5% from the long term averages and the deviation results in a savings shortfall.
d. User Participation: Clarify what degree of user participation (e.g., control settings) is needed to generate savings and use monitoring and training to mitigate risk. If performance is stipulated, document and review assumptions carefully and consider M&V to confirm the capacity to save (e.g., confirm that the controls are functioning properly).	User participation is anticipated to operate and maintain the Equipment and produce the projected savings. QESP will provide training to the operating staff to ensure that they understand the system requirements and can quickly identify any problems that impact proper performance. Because QESP cannot control the City mission, any changes reported will be reviewed for impact on consumption and may be applied as adjustments when calculating annual verified savings.
3. Performance	
a. Equipment Performance: Clarify the QESP's and City's responsibilities for initial and long- term performance of Equipment, how it will be verified, and what will be done if performance does not meet expectations.	ESM implementation responsibility of the QESP includes properly completing final designs and installation of systems and equipment. During commissioning, the initial performance of the Equipment will be verified as described in the M&V Plan. In the event of performance of the Equipment will be verified as described in the M&V Plan. In the event of performance deficiency during commissioning, QESP will make needed corrections. QESP has included pre and post-installation onsite measurements for the ESMs, along with a regular detailed review of Energy Management System (EMS) trend data and electric and natural gas data. This will allow QESP to monitor operations of the ESMs during the Guarantee Tem, and help identify any discrepancies to City in a timely manner to help ensure the persistence of savings. In the event QESP identifies an ESM that is not meeting the expected level of service or performance due to factors under the City's control, the City will report back to QESP with a plan to bring the ESM back into compliance. If the expected level of service or performance is not met due to design or equipment selection, QESP will report back to the City with a plan to bring the ESM back into compliance. This process will ensure that both standards of service and performance are maintained throughout the Guarantee Term.
b. Operations: Clarify which party will perform Equipment operations, the implications of Equipment control, how changes in operating procedures will be handled, and how proper operations will be assured.	The City will operate the installed Equipment. During the Interim Period, QESP will provide training to City staff members who will be operating the equipment. Periodic site visits by QESP staff during the Guarantee Term will be used to identify any areas where operational improvements are needed. The City will provide, in writing a monthly operations report documenting the their operation of equipment and systems associated with the ESMs, as well as changes in the operation of other systems that affect the energy use of the facility. Because QESP cannot control the City mission,

QESP's APPROACH	any changes reported will be reviewed for impact on consumption and may be applied as adjustments when calculating annual verified savings.	ain Responsibilities and Schedule CC, City's Maintenance Responsibilities. Responsibilities and Schedule CC, City's Maintenance Responsibilities. The City will provide, in writing a monthly operations report documenting the their operation of equipment and systems associated with the ESMs, as well as changes in the operation of other systems that affect the energy use of the facility. Because QESP cannot control the City mission, any changes reported will be reviewed for impact on consumption and may be applied as adjustments when calculating annual verified savings.	After the initial warranty period, the City will retain responsibility for long-term repair and replacement of the installed Equipment with the exception of QESP repair and replacement responsibilities outlined in Schedule BB, QESP's Maintenance Responsibilities. Training for proper equipment replacement of ESPC-installed equipment will be provided as specified by QESP. The City will provide, in writing a monthly operations report documenting the their operation of equipment and systems associated with the ESMs, as well as changes in the operation of other systems that affect the energy use of the facility. Because QESP cannot control the City mission, any changes reported will be reviewed for impact on consumption and may be applied as adjustments when calculating annual verified savings.
CLARIFICATION OF KEY M&V VARIABLES		c. Preventive Maintenance: Clarify who is responsible for performing long-term preventive maintenance to maintain operational performance throughout the term of the SOW. Clarify how long term preventive maintenance will be assured, especially if the party responsible for long-term performance is not responsible for maintenance (e.g., QESP provides maintenance checklist and reporting frequency). Clarify what will be done if inadequate preventive maintenance impacts performance.	d. Equipment Repair and Replacement: Clarify who is responsible for performing replacement of failed components or Equipment replacement throughout the Guarantee Term. Specifically address potential impacts on performance due to Equipment failure. Specify expected Equipment life and warranties for all installed Equipment. Discuss replacement responsibility when Equipment life is shorter than the Guarantee Term.

Determination of Verified Energy Cost Savings

The Verified Energy Cost Savings during the Guarantee Term will be determined by multiplying the Verified Savings as detailed in *M&V Plan* multiplied by the applicable utility rate for each Guarantee Period. The total Verified Energy Cost Savings for each year will be compared against the total of the Guaranteed Savings multiplied by applicable utility rates to determine the amount of any shortfall or excess savings in any Guarantee Period. The section below contains a detailed description of how the Utility Rates have been determined. The following sections illustrate the utility rates that will be used.

Annual Energy Savings Guarantee Overview Table

The annual energy savings guarantee overview table is provided in *Schedule A: Energy Savings Guarantee*.

Utility Rates

Baseline Utility Rates

The baseline energy utility rates are shown below in Table C-3 and Table C-4. These rates were used to calculate projected savings.

Table C-3: Baseline Utility Rates

	Rate Code	\$/kVV	\$/KVA	\$/kWh	Natural Gas Rate (\$/CCF)

Post-Installation and Performance Phase Utility Rates

Upon project completion the energy rates will be escalated for each successive Guarantee Period of the contract by the percentages shown in Table C-4. Guarantee Period 1 cost savings will be calculated using either the escalated Guarantee Period 1 rates shown below in table C.1.1.5-3 or the actual utility rates paid by the City, whichever is higher.

Table C-4: Escalation Rates of Baseline Utility Rates

Guarantee Period	Electricity	Natural Gas
1	107.1%	107.1%
2	103.5%	103.5%
3	103.5%	103.5%
4	103.5%	103.5%
5	103.5%	103.5%

Verified Energy Cost Savings Calculation

Verified Energy Cost Savings = ∑ Energy Unit Savings x Applicable Escalated Utility Rate

Additional Savings: Additional energy and/or operational cost avoidance that can be demonstrated as a result of QESP's efforts that result in no additional costs to the City beyond the costs identified in this SOW will be included in Verified Savings reported in the AVR for the applicable Guarantee Period(s).

Savings Prior to Final Acceptance: All energy and operational cost avoidance realized by the City, and as calculated through the Measurement & Verification Plan, that results from activities undertaken by QESP prior to the Date of Commencement may be applied to the Verified Savings for the First Guarantee Period.

Savings Shortfalls: In the event that the total Verified Energy Cost Savings in any Guarantee Period is less than the total of the Guaranteed Savings multiplied by the applicable utility rates, as described in this section, for that Guarantee Period, QESP will, upon receipt of written demand from the City, compensate the City the amount of any such shortfall, limited by the value of the guarantee, within thirty (30) calendar days. Resulting compensation will be QESP's sole liability for any shortfall in the Guaranteed Savings.

Savings Reconciliation Documentation: QESP will provide the City with an Annual Verification Report ("AVR") within 60 days of the end of the Guarantee Period. City will provide QESP access to all energy billing information, maintenance records, drawings, or other data deemed necessary by QESP to generate the AVR.

The City will also provide in writing a summary of changes to facilities each month including, but not limited to:

- Addition, renovation or demolition of buildings served by these meters
- Significant changes in functional use of the buildings or portions of buildings.
- Changes in operating hours, temperature set points, and other control strategies,
- Adding or removing equipment in the buildings, including plug loads.
- Improper maintenance or operation of the heating systems

Data and calculations used by QESP in the preparation of its AVR will be made available to the City, along with such explanations and clarifications as City may reasonably request.

Acceptance of Annual Verification Report: At the end of each Guarantee Period, the City will have 30 days after receipt of the AVR to review it and provide written notice to QESP of acceptance or non-acceptance of the AVR for that Guarantee Period. Failure to provide written notice within 30 days of the receipt of the AVR will constitute the deemed acceptance of the Report and its findings by the City.

Annual Verification: Verified Savings will be determined in accordance with the methodologies, operating parameters, formulas, and constants as described in this Measurement & Verification Plan. Actual savings reduction in utility bills may vary from the Verified Savings for reasons outside of QESP's control, including but not limited to: changes in energy and other utility rates and tariffs, changes in City operating schedules and usage patterns, changes in City loads due to addition or reductions in energy and water consuming devices, changes in weather, impacts due to the operations of ESMs, impacts due to the maintenance of ESMs maintained by the City, and additions to and/or reduction in Project Sites space usage. For the purposes of

calculating any shortfalls or excesses of Verified Savings versus Guaranteed Savings, the Measurement & Verification Plan will be used.

Verified Energy Cost Savings will be determined by multiplying the energy unit savings by the agreed-upon escalated utility rates. While Guaranteed savings have been provided for each unit of energy savings, no shortfall will be recognized unless the overall Verified Energy Cost Savings in a given Guarantee Period falls short of the total of the Guaranteed Savings for that year multiplied by the applicable utility rates.

Activities and Events Adversely Impacting Savings: The City must promptly notify QESP of any activities known to the City, which adversely impacts QESP's ability to realize the Guaranteed Savings; and, QESP will be entitled to reduce the Guaranteed Savings by the amount of any such adverse impact, to the extent that such adverse impact is beyond QESP's reasonable control.

Guarantee Adjustment: QESP's Guaranteed Savings obligations under this SOW are contingent upon:

- (1) the City following the operations and maintenance requirements for the ESMs in accordance with the SOW;
- (2) no alterations or additions being made by the City without prior notice and written agreement of the Parties;
- (3) the City sending all current utility bills to QESP within two (2) weeks after receipt; and
- (4) QESP's ability to render services not being impaired by circumstances beyond its control.

To the extent that the City defaults or fails to perform fully any of its obligations under this the SOW, QESP may, in its sole discretion, make a corresponding adjustment to the Guaranteed Savings obligation equal to the impact to savings from the City's default or failure to perform; provided, however, that no adjustment hereunder will be effective unless QESP has first provided the City with written notice of the City's default(s) or failure(s) to perform and the City has failed to cure its default(s) and failure(s) to perform within thirty (30) days after receipt of such notice.

SCHEDULE D

Warranties

This Schedule D describes the warranties.

NORESCO will provide a standard parts and labor warranty on all equipment installed under this contract, as well as, an extended manufacturer's parts and labor warranty on the new chillers and new energy management systems. These warranties cover issues such as improper equipment installation, faulty wiring, and systemic product failure and are subject to limitations in the specific warranties which will be provided to the City.

The warranties will begin upon Substantial Completion of each ESM. Any defect or failure in the manufacturer's product can be remedied by the manufacturer during the manufacturer's warranty period. NORESCO will also provide manufacturer's warranty information to the City in as-built O & M manuals delivered to the City at the end of the construction period and before receiving the Certificate of Acceptance of all ESMs upon Final Completion from the City. Table D-1 shows the major equipment and associated manufacturer warranty periods that will run from the date specified at Substantial Completion of the ESM. NORESCO will manage manufacturer warranty claims during the warranty period only, with the exception of the chillers and new energy management system equipment where NORESCO will manage warranty claims during the extended parts and labor warranty periods. Owner shall be responsible for managing all other manufacturer warranties after NORESCO's warranty period.

Final equipment and manufacturer selection will be completed during the material submission process post award. The table below provides estimated warranty periods for the equipment used to develop the IGEA price. In the event that equipment selections changes during the post execution design process, associated warranty periods may change and will be documented as part of the design submittal process.

Table D-1: Manufacturer Warranties for Equipment to Be Installed

ES	M Equipment	Warranty			
1	Lamps	Manufacturer 3-year limited warranty on parts			
	Ballasts	Manufacturer 5-year limited warranty on parts			
	Controls	Manufacturer 5-year limited warranty on parts			
	LED Interior High/Low Bay Fixtures	Manufacturer 5- to 10-year limited warranty on parts			
2	LED Exterior Fixtures	Manufacturer 5-year limited warranty on parts			
3	Chiller	Manufacturer 5-year extended warranty on parts and labor			
	Pumps	Manufacturer 1-year limited warranty on parts			
4	Dampers	Manufacturer 1-year limited warranty on parts			
5	Direct Digital Controls	Manufacturer 2-year extended warranty on parts and labor			
6	Weatherstripping	Manufacturer 1-year limited warranty on parts			
	Batt Insulation	Manufacturer 1-year limited warranty on parts			
	Rigid Insulation	Manufacturer 1-year limited warranty on parts			
7	Piping Insulation	Manufacturer 1-year limited warranty on parts			

ESM	Equipment	Warranty			
8	Thermostatic Radiator Valves	Manufacturer 1-year limited warranty on parts			
9	Plug Load Controls	Manufacturer 1-year limited warranty on parts			
10	Cooler Controls	Manufacturer 1-year limited warranty on parts			
11	HB Smith Steam Boilers – Cast Iron Sections	Manufacturer 10-year limited warranty on parts			
	PowerFlame Burners	Manufacturer 15-month limited warranty on parts)			
12	Cleaver Brooks Steam Boilers – Pressure Vessels & Burners	Manufacturer 5-year extended warranty on parts and labor			
	HB Smith Steam Boilers – Cast Iron Sections	Manufacturer 10-year limited warranty on parts			
	Aerco Hot Water Boilers – Pressure Vessel/Heat Exchanger	Manufacturer 10-year limited warranty on parts			
	Aerco C-More Control Panel	Manufacturer 2-year limited warranty on parts			
	Aerco Hot Water Boilers – Other Components	Manufacturer 18-month limited warranty on parts			
	Aerco Smart Plate Heat Exchangers	Manufacturer 5-year limited warranty on parts			
	Lochinvar Pool Heaters – Pressure Vessel/Heat Exchanger	Manufacturer 3-year limited warranty on parts			
13	Trina Solar Photovoltaic Panels	Manufacturer 25-year limited warranty on parts			
	Solectria Inverters	Manufacturer 10-year limited warranty on parts			
	Solar Mounting System	Manufacturer 1-year limited warranty on parts			
14	Electrical Switchgear	Manufacturer 1-year limited warranty on parts			
	Emergency Generator	Manufacturer 1-year limited warranty on parts			

Average Useful Life

Table D-2 below contains the average useful life of the major equipment to be installed as part of the ESMs. Equipment useful lives are based on 2011 ASHRAE: HVAC Application Handbook, Chapter 37.3.

Table D-2: Average Useful Life of Major Equipment

ESM Name	ESM Equipment	Useful Service Life (Median Years)
Interior Lighting Improvements	Interior lighting and controls	15 and 15
Exterior Lighting Improvements	Exterior lighting	15
Variable Speed Chillers and Pumps	Chillers and pumps	20 and 20
Air Handler Unit Damper Refurbishments	Dampers	20
EMS Upgrades and Expansion	Direct digital controls and motors	15 and 18

ESM Name	ESM Equipment	Useful Service Life (Median Years)
Building Weatherization	Weatherstripping, sealants	24
Pipe & Fitting Insulation	Blanket and removable jackets	24
Steam Traps & Thermostatic Radiator Valves	Traps	15
Plug Load Controls	Plug Load Controls	15
Walk-In Cooler Controls	Controls & motors	15 and 18
Steam Boilers	Cast Iron Sectionals	30
Hot Water Boilers & Pool Heating Systems	Firetube (steam and hot water) boilers	25
Solar Photovoltaics	PV arrays	20
New Electrical Switchgear & Backup Power Generation	Panel boards and gas-fired engine	30 and 20

SCHEDULE H

Final Project Cost & Project Cash Flow Analysis

Table H-1 illustrates the costs and pricing for the work being installed as defined in the SOW. Table H-2 provides the project cash flow analysis.

Table H-1: Summary of Energy Savings Measures

	Energy Savings Measures	Implementation Price (Note 1)	Estimated Incentives	Anticipated Annual Cost Savings	Simple Payback Net of Incentives
1	Interior Lighting Improvements & Controls	\$2,099,167	\$489,680	\$344,408	4.7
2	Exterior Lighting Improvements	\$986,487	\$264,504	\$127,455	5.7
3	Variable Speed Chillers & Pumps	\$1,205,847	\$35,049	\$43,149	27.1
4	Air Handling Unit Damper Refurbishments	\$321,805	\$46,024	\$29,038	9.5
5	Energy Management System Upgrades & Expansion	\$5,345,037	\$1,536,934	\$621,167	6.1
6	Building Weatherization	\$584,590	\$146,921	\$47,528	9.2
7	Pipe & Fitting Insulation	\$804,356	\$268,882	\$79,239	6.8
8	Steam Traps & Thermostatic Radiator Valves	\$784,163	\$272,573	\$93,420	5.5
9	Plug Load Controls	\$176,810	\$60,372	\$27,543	4.2
10	Walk-In Cooler Controls	\$147,423	\$29,329	\$13,115	9.0
11	Steam Boilers	\$5,984,134	\$103,757	\$69,948	84.1
12	Hot Water Boilers & Pool Heating Systems	\$7,407,670	\$445,829	\$153,827	45.3
13	Solar Photovoltaics	\$305,388	\$0	\$27,863	11.0
14	New Electrical Switchgear & Backup Power Generation	\$1,255,855	\$0	\$0	N/A
	Project Totals	\$27,415,059	\$3,699,854	\$1,677,700	14.1

Note 1: This Implementation Price includes a \$225,738 total credit to the City consisting of a reduction of ECG's Consulting Services fee, as well as, a reduction of NORESCO's overhead and profit. The original Implementation Price before this credit was applied was \$27,640,797. The ECG Consulting Fee has been included, and proportionally allocate d to the ESM Implementation prices illustrated.

Illustrative Cash Flow for the City of Waterbury Project

NORESCO recognizes that the City has finance and term options to select the most advantageous method to fund the project scope. The cash flow on the following page illustrates a potential Tax-Exempt Municipal Lease (TELP) funding option. Table H-2 provides a cash flow

positive net of the anticipated savings, payments, and utility incentives over a 15-year term, after project implementation. Cash flow assumptions are provided below.

Table H-2: Illustrative Cash Flow Based on the Following Page Assumptions

Net Cash Flow	\$0	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$1,238,286
Total Cost	\$1,353,600	\$1,595,148	\$1,652,497	\$1,711,819	\$1,773,184	\$1,836,661	\$1,821,517	\$1,887,016	\$1,954,781	\$2,024,891	\$2,097,426	\$2,172,471	\$2,250,113	\$2,330,442	\$2,413,550	\$2,499,536	\$31,374,646

Project Implementation Price:	Anticipated Savings During Construction Amount (-)	Estimated Utility Incentives & Rebates (-)	Estimated Capitalized Construction Interest (+)	

Total Financing Balance when Repayment Commences: \$23,506,887

Finance Rate: 2.50%

Cash Flow Assumptions:

- A 24-month construction and commissioning period prior to commencing the repayment term.
- First-year savings based on 3-year average utility rates for each specific building from 2013-2015, and an annual energy escalation rate of 3.50%.
 - Year 0 represents the cumulative estimated savings that will be achieved during the construction period as ESMs are completed.
- Net of utility incentives based on Eversource Project Caps and Incentive Levels effective January 2016
- Operating lease with stepped payments with level net cash flow to match savings at 2.50% for 15-year term.
- Project Implementation Price includes ECG consulting service fee.

SCHEDULE I

Payment Schedule

This Schedule I includes the payment schedule and the progress payment disbursement schedule that will be used to pay the QESP during the Interim Period (construction and installation) for the agreed-upon percentages of Work completed.

The City shall pay to QESP the amount equal to the SOW Sum \$27,415,059, in accordance with the terms described herein. During the Interim Period, the City will make monthly progress payments to QESP based upon the portion of the Work completed and material stored on-site at the end of each month. The estimated monthly amounts for the duration of the Interim period are identified in Table I-1.

Table I-1: Projected Progress Payments During the Interim Period

	Projected Progress
Construction Month	Payment
1	\$655,142
2	\$729,799
3	\$1,017,503
4	\$1,432,528
5	\$1,861,316
6	\$1,453,948
7	\$1,884,112
8	\$1,830,385
9	\$1,830,385
10	\$1,830,385
11	\$1,705,433
12	\$856,917
13	\$560,042
14	\$460,679
15	\$460,679
16	\$460,679
17	\$690,119
18	\$1,463,429
19	\$1,463,429
20	\$1,420,683
21	\$605,963
22	\$0
23	\$2,622,756
24	\$118,750
Total	\$27,415,059

The projected progress payments above include the Consulting Services fee for ECG of \$1,187,500. NORESCO shall remit payment directly to ECG based on the payment schedule below. Payment shall be due within 30 days from achieving each milestone. The City may withhold payment to NORESCO in the event timely payments are not made to ECG.

ECG Payment Schedule

- 20% upon City signing contract with QESP;
- 35% upon approval of applicable plans and specifications by applicable local, state and federal agencies;
- 25% upon fifty percent (50%) completion of QESP construction contract;
- 10% upon certified substantial completion of QESP construction contract; and
- 10% upon certified final completion of QESP construction contract.

Within thirty (30) days after the date of an invoice on account of work completed by QESP, the City shall pay QESP the invoiced amount. Retainage defined in Section 2.1 of the SOW shall be held as additional security for the faithful performance by QESP of all the work required under SOW and shall be paid to QESP within thirty (30) days from the Commencement Date.

Amounts not paid to QESP on or before the due dates specified above will accrue interest at the rate of the prime interest rate for the number of days following the due date until such time as such amount due has been paid in full.

Pursuant to Section 3.2 of Exhibit A, NORESCO has provided an annual guarantee sufficient to cover any and all annual payments as shown in Schedule H, Table H-2 for the 5 year Guarantee Term. NORESCO has include anticipated savings for the 15 year financing term in Schedule H despite the City requesting the guarantee only extend 5 years. The project cost including financing was calculated using financing assumptions provided by the City. The City must advise QESP of any changes to the financing assumptions prior to execution of Exhibit A. In no event shall QESP be responsible for savings in excess of the Guaranteed Savings for the Guarantee Term.

Hazardous Materials Abatement Allowance

The SOW Sum includes an allowance in the amount of \$890,000 for testing and abatement of hazardous materials that may be encountered on the project, including the abatement of lead and asbestos that may be encountered. NORESCO may use this allowance for abatement at its discretion during the construction period. Any hazardous materials testing or abatement required for the completion of the SOW in excess of this allowance shall be the sole responsibility of the City. NORESCO makes no representations or warranties with respect to the amount or character of hazardous materials that may be encountered in the SOW. NORESCO will provide the City with an accounting of this allowance prior to Final Completion of the project. Any funds remaining in the allowance may be allocated to additional work through execution of a change order or remitted to the City.

ECM 14 Design Allowance

The SOW Sum includes a design allowance in the amount of \$50,000 for ECM 13 that may be used to add additional scope to that measure after execution of the Contract at the request of

the City. Use of this allowance will be authorized by execution of a change order by both Parties. Any funds remaining in the allowance may also be allocated to additional work at the City's request through execution of a change order or remitted to the City at the end of the Interim Period.

SCHEDULE J

Compensation to QESP for Annual Services

This Schedule J shows the amount and frequency of payments to be made to the QESP for Annual Services. Table J-1 provides the annual total of the quarterly services payments that are to be made to the QESP. The services payments are for the maintenance, monitoring, and verifications services in Schedule C. Services fees are calculated using the QESP costs and margins applied in accordance with Schedule H.

QESP shall invoice the City monthly beginning in the first month of each Guarantee Period for Annual Services. The City shall pay for Annual Services in twelve (12) equal monthly installments. Amounts not paid to QESP on or before the invoice due dates will accrue interest at the rate of the prime interest rate for the number of days following the invoice due date until such time as such amount due has been paid in full.

At any time during the Term of this Contract, the City may cancel the O&M services upon ninety (90) days' written notice to NORESCO that the services are no longer required. NORESCO shall terminate all remaining services upon expiration of the ninety (90) day notice period and shall pro-rate and return any unused O&M Fee payments for the Guarantee Year in which the termination becomes effect. Upon termination the City shall be responsible for performing the annual services provided by NORESCO as described in Schedule V and Schedule BB.

At any time during the Term of the Contract, the City may terminate Measurement and Verification (M&V) services for convenience upon thirty (30) days' written notice to NORESCO. In the event the M&V services are terminated prior to the end of the Guarantee Term, the Guaranteed Savings for the Guarantee Period in which such termination becomes effective will be prorated as of the effective date of such termination, with a reasonable adjustment for seasonal fluctuations, if any, in Energy and Operational Costs, and the Guaranteed Savings for all subsequent Guarantee Periods will be null and void.

Table J-1: Guarantee Term Fees

Guarantee Period	O&M Fees	M&V Fee	Annual Service Payments
1	\$193,848	\$35,697	\$229,545

SCHEDULE K

Rebates, Incentives, and Grants

This Schedule K identifies and describes dollar amounts for any rebates, incentives, or grants related to the Work.

QESP will apply for rebates, incentives, and grants in a timely manner. Incentives will be paid directly to the City unless the City directs the utility otherwise. Any incentive amounts projected by QESP are estimates and are subject to pre-approval and post-approval by the awarding authority. Actual amounts paid may vary from the estimated incentives.

All incentive monies will be credited to the City. QESP has conducted a preliminary evaluation of the electric and gas incentives offered by Eversource. Incentives are currently available for several of the technologies under their Comprehensive Project Initiative for Existing Building Retrofit. The Comprehensive Project Initiative incentive levels require that multiple buildings are included in the project and the savings are generated from both electricity and natural gas. This project currently meets both of those criteria. In addition, the incentive levels are: Total Project Incentive is up to 50% of installed cost; neither electric nor gas can exceed 85% of the total project savings; and comprehensive "Project Cap" for all ESMs is \$0.40/kWh saved and \$3.50/CCF saved.

SCHEDULE Q

Description of Project Sites

This Schedule Q is a description of the condition of the Project Site(s) at the time of execution of the SOW, including facility square footage, building construction, and department of use. This information is outlined in Table Q-1. Additional Project site details are included in IGEA Section A: Facility Profiles.

Table Q-1: Description of Project Sites

Building	Address	Sq Ft.	Construction	Dept
Barnard School	11 Draher Street	48,600	1898	BOE

SCHEDULE R

Equipment to Be Installed by QESP

This Schedule R includes a summary of each ESM included in the final project scope. A detailed scope of work and list of the Equipment to be installed for the ECMS listed below, including manufacturer, quantity, and location, and sets forth any modifications that will be made to existing Goods can be found in IGEA Section C: Savings Opportunities Summary.

ESM 1: Interior Lighting Improvements & Controls

NORESCO will optimize the existing lighting systems by upgrading the existing T8 lighting with linear TLED lamps. NORESCO will achieve this by retrofitting existing 32-watt 4-ft and U-tube fluorescent luminaries with high-efficiency, 12.5- and 16.5-watt, TLED lamps compatible with existing electronic ballasts; retrofitting existing 2-ft and 3-ft fluorescent luminaries with high-efficiency, 8- and 10.5-watt, TLED lamps compatible with existing electronic ballasts; replacing incandescent lighting with new high-efficiency LED lamps or luminaries; and replacing high intensity discharge (HID) luminaries with new high-efficiency LED luminaries. NORESCO will also install wireless ceiling-mounted sensors in selected classroom and corner-mounted sensors in selected hallways in nine Waterbury schools.

ESM 2: Exterior Lighting Improvements

NORESCO will optimize the exterior lighting systems by upgrading existing High Intensity Discharge (HID) luminaries with new LED luminaries. NORESCO will achieve this by: replacing existing building-mounted and pole-mounted metal halide (MH) and High Pressure Sodium (HPS) luminaries with new high-efficiency LED luminaries. For exterior fluorescent luminaires in walkways and parking garages, NORESCO will upgrade them by retrofitting existing 32-watt 4-ft luminaries with high-efficiency, 12.5-watt, TLED lamps compatible with existing electronic ballasts.

ESM 3: Variable Speed Chillers & Pumps

NORESCO will replace the two (2) existing water-cooled chillers with two (2) new 250-ton high efficiency units. The new integrated variable speed, water cooled, screw chillers will make use of the environmentally friendly refrigerant R-134A to reliably and efficiently cool the high school and middle school buildings. The existing chilled and condenser water pumps will be replaced with properly sized equipment, including premium efficiency motors, and the piping will be modified to optimize operational efficiencies. The new equipment will include new direct digital controls (DDC) that will be integrated to the newly upgraded energy management system (EMS).

ESM 4: Air Handling Unit Damper Refurbishments

NORESCO will refurbish or replace the dampers for seventy-six (76) air handling units in the buildings listed above. The scope of work will include installing thirty-four (34) new outdoor/return/exhaust air dampers and refurbishing/rebuilding one hundred and forty-six (146) existing-to-remain outdoor/return/exhaust air dampers.

ESM 5: Energy Management System Upgrades & Expansion

NORESCO will install new, comprehensive web-accessible direct digital control (DDC) energy management systems and/or retro-commission (RCx) the existing-to-remain control systems in twenty-three (23) buildings. New electronic controls will automatically enable HVAC systems and modulate heating, cooling, and ventilation to maintain space temperature setpoints. Schedules will be set up in accordance with occupancy to reduce energy use during off hours. For retro-commissioning, we will evaluate the existing-to-remain HVAC controls systems at the appropriate facilities and identify and correct existing deficiencies with the controls and sequences of operation.

ESM 6: Building Weatherization

NORESCO will reduce infiltration by sealing cracks with foam or beads of caulk as needed, improving door seals, replacing worn sweeps and weatherization strips on doors, making roof-to-wall joint gaps airtight and sealing exterior envelope penetrations.

ESM 7: Pipe & Fitting Insulation

NORESCO will install new fiberglass pipe insulation with all service jackets, and removable insulating jackets on exposed metal steam and hot water pipe, fittings, valves, and associated equipment in twenty-three (23) City buildings and schools.

ESM 8: Steam Traps & Thermostatic Radiator Valves

NORESCO performed a comprehensive steam trap audit, identifying all traps as well as quantifying leaking and plugged traps. We will repair two hundred and sixty-two (262) traps to generate energy savings and prolong the service life of equipment served by the steam system. NORESCO also performed a comprehensive audit of all the standalone perimeter steam terminal devices such as radiators, convectors, and baseboard fin tube, cataloguing each piece of equipment and its control device. NORESCO will install eight hundred and twelve (812) thermostatic radiator valves (TRVs) to automatically control the steam equipment's heat output to generate energy savings as well as significantly improve the comfort conditions in the spaces served. The installation of these temperature control valves will also include the removal of existing obsolete and problematic pneumatic valves and thermostats, resulting in additional maintenance cost savings as well as the energy savings associated with running the building air compressors.

ESM 9: Plug Load Controls

NORESCO will install plug load management technology to provide additional energy savings during unoccupied hours and weekends. The installation includes controllable electrical receptacles, building controllers, and a web-based application and software suite for programming, analytics, reporting, and a user-interface dashboard.

ESM 10: Walk-in Cooler Controls

NORESCO will install advanced controls and equipment on the walk-in coolers and freezers in the City's kitchens. The controls and equipment will optimize evaporator fan, door heater, compressor, and condensing unit operation. NORESCO will also replace low-efficiency

fractional horsepower evaporator fan motors with high-efficiency electronically commutated motors.

ESM 11: Steam Boilers

NORESCO will install fourteen (14) new natural gas-fired steam boilers and ancillary heating system equipment in seven (7) buildings. The boilers will be equipped with high-efficiency natural gas burners and modulating controls. This new equipment will serve the buildings' current steam loads, as well provide a degree of redundancy if one of the boilers is down for service. Control of the new boilers will be integrated through the new energy management system (EMS) and provide web-accessible control and monitoring of the buildings' heating plants to facilities staff.

ESM 12: Hot Water Boilers & Pool Heating Systems

NORESCO will install a total of seven (7) gas steam boilers, seven (7) gas hot water boilers, two (2) gas pool heaters, one (1) pool heat exchanger, two (2) hot water heat exchangers, three (3) domestic hot water heat exchangers, pumps, feedwater tanks, and other ancillary heating system equipment in the four buildings listed. Heating systems will be redesigned and modernized to allow for high-efficiency condensing boilers and pool heaters to be incorporated with new steam boilers to provide optimized operations and efficiencies. The boilers will be a combination of high-efficiency condensing hot water boilers and steam boilers with high-efficiency natural gas burners and electronic combustion trim and O₂ controls. This new equipment will serve the building space, domestic, and pool heating loads. Control of the new boilers will be integrated with the upgraded and expanded EMS and provide web-accessible monitoring and control of the buildings' heating plants to facilities personnel.

ESM 13: Solar Photovoltaics

NORESCO will install solar PV array systems on the roofs of the Police HQ and Duggan ES. The PV systems will include solar panels, racks, mounts, inverters, disconnects, and all cabling, wiring, and controls. Roofs on all buildings were evaluated, and the buildings listed are included because the roofs are only a few years old or will be replaced by the time this project goes to construction.

ESM 14: New Electrical Switchgear & Backup Power Generation

NORESCO will install new electrical switchgear, backup emergency generator, and additional electrical infrastructure in the Chase Building to provide emergency power to the third floor IT data center and the fourth floor Emergency Operations Center.

The SOW Sum includes a design allowance in the amount of \$50,000 for ECM 14 that may be used to add additional scope to that measure after execution of the Contract at the request of the City. Use of this allowance will be authorized by execution of a change order by both Parties. Any funds remaining in the allowance may also be allocated to additional work at the City's request through execution of a change order or remitted to the City at the end of the Interim Period.

Hazardous Materials Abatement Allowance

The SOW Sum detailed in Schedule I includes an allowance in the amount of \$890,000 for testing and abatement of hazardous materials that may be encountered on the project, including the abatement of lead and asbestos that may be encountered. NORESCO may use this allowance for abatement at its discretion during the construction period. Any hazardous materials testing or abatement required for the completion of the SOW in excess of this allowance shall be the sole responsibility of the City. NORESCO makes no representations or warranties with respect to the amount or character of hazardous materials that may be encountered in the SOW.

SCHEDULE S

Construction and Installation Schedule

This Schedule S includes the dates and milestones for project construction and Equipment installation.

SCHEDULE T

Systems Startup and Commissioning

This Schedule T describes the thorough and systematic commissioning process that the QESP shall undergo for each element and total system of the installed Equipment pursuant to the SOW. QESP shall provide systems commissioning services that meet the requirements detailed in this Schedule T. All commissioning services for the project shall be provided in accordance with the requirements of ASHRAE (American Society of Heating, Refrigerating and Air-Conditioning Engineers) Guideline 0-2005.

COMMISSIONING PROCESS

The project's commissioning plan and specific commissioning requirements that the QESP will develop shall include at least the following:

- Qualifications and affiliation of the QESP commissioning team, including project staff licensed by the State of Connecticut as Professional Engineers in mechanical or electrical engineering and project staff certified in building commissioning by the Building Commissioning Association or the Association of Energy Engineers;
- Roles and responsibilities of commissioning team, including completion of the commissioning requirements, overseeing or performing the commissioning tests, and verifying the adequacy of the commissioning results;
- Roles and responsibilities of QESP, City, and City's commissioning representative, including witnessing of commissioning activities;
- Process that will be followed to document the design intent or City's project requirements for each ESM or system, including:
 - Operational parameters, such as temperature setback capabilities or operator interface features.
 - Requirements for design details or ancillary items, such as sensors, valves, access, electrical, existing Goods demolition, etc., and
 - Performance requirements, such as Equipment efficiencies;
- Schedule for developing and approving a commissioning plan, including expected content such as:
 - Pre-functional inspections,
 - Functional testing procedures, and
 - Required use of manufacturers' start-up procedures;
- Requirements for the documentation of the City's attendance at the various tests and the City's approval that the tests followed the specified procedures and meet or exceed the expected results;
- Plan for seasonal testing and conditional acceptance, if needed;
- Contents and timing of periodic project reports, Final Commissioning Report, and Systems Manual;
- Requirements for commissioning team oversight of O&M training; and
- Plan for warranty walk-though or other follow-up procedures.

PROJECT DESIGN

QESP shall be responsible for successful performance of commissioning activities by the commissioning team during the design phase, including:

- Meeting with City to review project design and Equipment submittals;
- Documenting the design intent for each ESM or system;
- Developing a commissioning plan, including the specifics of pre-functional inspections and functional performance tests;
- Developing commissioning specifications for project (if needed);
- Facilitating review and acceptance of commissioning documents by City and QESP;
- Issuing Commissioning Plan and specifications.

CONSTRUCTION

QESP shall be responsible for successful performance of commissioning activities by the commissioning team during the construction phase, including:

- Observation of construction by commissioning team and City's commissioning representative;
- Pre-construction and periodic commissioning meetings with the project team;
- Tracking of commissioning progress through regular reports or updates;
- Completion of pre-functional inspections by the QESP prior to Equipment start-up and functional testing;
- Completion of manufacturer's start-up procedures by the QESP or manufacturer's representative.

PROJECT ACCEPTANCE

QESP shall be responsible for successful performance of commissioning activities by the commissioning team during the project acceptance phase, including those listed below. Project acceptance shall occur upon execution by the City of the Certificate of Acceptance of All Installed Equipment.

- Development of test checklists and verification of completion forms for Equipment to be commissioned;
- Execution of the functional performance tests and documentation of the procedures;
- Documentation in a deficiency log of any items that did not pass;
- Correction and retesting of noncompliant items in the presence of the commissioning team to confirm that the items have been fixed, noting the date and corrective action taken in the deficiency log;
- Preparation of the Commissioning Report or a Systems Manual including, at minimum, the following:
 - Commissioning summary report, including how the project requirements or design intent prescribed for each system were met,
 - · QESP test forms and checklists,
 - Completed manufacturers start-up sheets,

- Results of functional testing and verification of system,
- Detailed operating procedures / sequences of operations,
- Closed out deficiency log, and
- Overview of training provided to O&M staff.

POST-ACCEPTANCE PHASE

QESP shall be responsible for successful performance of commissioning activities by the commissioning team during the post-acceptance phase, including:

- Scheduling and verification of deferred functional testing, as necessary, based on seasonal conditions required to evaluate certain systems; and
- If necessary, scheduling and performance of a warranty walk-though to review any problems with Equipment encountered during warranty periods.

APPROACH

The approach that QESP uses for commissioning is an extension of our site management approach. It is based on a project team organization that requires the input of all functional areas of the team. The commissioning team, led by the commissioning agent, will consist of QESP project implementation staff, the City project staff, and members of each relevant construction discipline. Manufacturer's representatives and subcontractors will also be included in the team to assist in performing certain specialized startup and testing procedures.

Key customer personnel, such as the City's technical representative, the City engineers and technical personnel, and the City operations & facilities staff will be an integral part of the commissioning team. QESP includes these customer personnel to coordinate activities with building operations, serve as resources in solving technical issues, review site-specific startup procedures, leverage commissioning efforts for training purposes, and witness tests. It is beneficial for supervisors and operational personnel to participate in commissioning activities, as they provide an ideal opportunity to become familiar with how the equipment included in the project should be operated to meet the design intent. As a result, facility personnel will be more likely to use the operational features of installed equipment to their fullest.

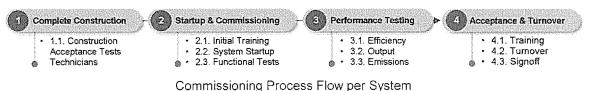

The following organizational chart is intended to serve as a preliminary guide to outline the parties who will be included in the City project commissioning team. Actual team members will be selected based on final design, equipment, and vendor selections.

Physical testing and documentation of commissioning tasks for the City project will be a joint effort between the commissioning team and the construction team. Subcontractors and equipment vendors are issued detailed specifications and are held accountable for the commissioning of equipment and systems included in their scopes. QESP construction and commissioning personnel will coordinate the activities of these supporting contractors and vendors. Testing and commissioning will be directly supervised and verified by QESP's professional staff.

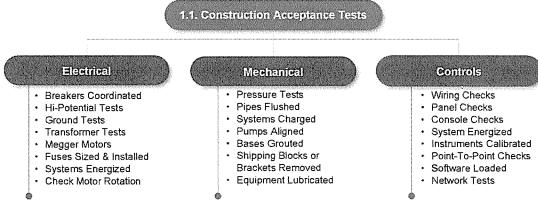

COMMISSIONING PROCESS

The following flowcharts are intended to serve as a guide to outline the type of commissioning process QESP will implement at the City project. Each of these charts is meant to be a simplified example of how most systems will be commissioned. Given the range of systems and ESMs involved at the City, as well as the preliminary nature of the design, it is expected that these may be revised during the final design stage.

Commissioning Freedom Few per Cystem

Systems will proceed through the commissioning process on individual schedules as they are ready for startup. Simple systems and ESMs will only require a subset of the tasks outlined above and will be brought on-line incrementally.

Construction Acceptance Tests

The construction acceptance tests outlined above are meant to be a representation of the majority of construction acceptance tests; this is not intended to be an all-inclusive list. Many systems and ESMs will only require a subset of these tests, while other systems and equipment (Controls, Chillers, Boilers, PV, Variable Frequency Drives, etc.) will require additional measures.

Startup and Commissioning Phase - Per System

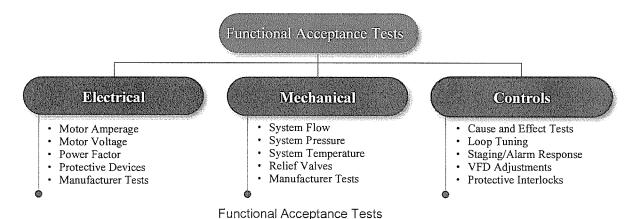

The startup and commissioning phase will require a great deal of coordination because ancillary systems will be required to operate larger integrated systems, and in many cases the ancillary systems cannot be fully tested until the integrated system is brought on-line. Coordination of

System Preparation and System Startup

these tasks will be outlined during daily communications between the QESP project staff and the City personnel.

Preparation and startup will vary greatly from system to system. This list is meant to convey examples of the tasks that will be performed at the City facilities during this phase. As site and equipment specific tasks are defined, they will be added to the project schedule and coordinated with the City facilities staff.

The tests outlined above are meant to be a representation of different types of functional acceptance tests that may be required at the City; this is not intended to be an all-inclusive list. Many systems will only require a subset of these tests.

Functional acceptance testing will vary greatly for each of the ESMs and each of the systems within the ESMs. Actual tasks for each of the ESMs and systems (chilled water systems, steam systems, energy management controls system, photovoltaic systems) will be included in functional acceptance test forms generated for that specific ESM or system.

COMMISSIONING PLAN

The primary objective of the commissioning plan is to define how QESP will ensure that the individual pieces of equipment and integrated systems will perform in conformance with the design intent of the project. Although there are different approaches to commissioning, the fundamental process provides quality assurance to confirm that each of the following standards are met for Equipment included in the project:

- The products and components selected and installed meet project design criteria.
- Products and components are installed in accordance with the engineer's and manufacturer's recommendations and design criteria.
- Products and components are capable of meeting their published performance criteria.
- If the project includes a system of several products and components, the integrated system is installed in accordance with the engineer's design criteria.
- If the project includes a system of several products and components, the integrated components are interacting in accordance with the engineer's design criteria.
- Foreseeable items necessary for the components and systems to continue to operate as designed have been identified for inclusion in the Operations and Maintenance (O&M) Manuals.
- The facility training plan includes items that need to be discussed and reviewed with facility personnel in order for the project to continue to perform.

Detailed commissioning tasks and requirements for the equipment to be installed as part of the City project will be identified in commissioning specifications. These specifications are developed by QESP using an approach customized to the complexity of each piece of equipment and the technology involved. The commissioning team will use the specifications to coordinate individual commissioning tasks and ensure that appropriate commissioning test forms are generated and completed to cover the items requested.

COMMISSIONING PROCEDURES

Specific commissioning procedures vary depending on component technologies, equipment types, and applications involved. As final design is completed, equipment selections are confirmed, and control sequences are finalized, QESP will generate a site-specific commissioning plan for the City project to outline these procedures. Procedures for each piece of equipment will draw from each individual manufacturer's recommendations.

The following representative sections provide examples of the range and types of commissioning procedures for a few of the components that will be listed in the commissioning plan when it is generated.

General Commissioning Items

 Verify that each piece of equipment was manufactured, shipped, and installed with the options and features specified (operator workstation, control system interface, ground fault protection, thermal overload, automatic bypass, safety devices).

- Provide a complete list of equipment nameplate data, component manufacturer's software and firmware versions, and serial number(s). (This should include data for individual available pressure vessels, coils, and motor data.)
- Document dates, times, durations, operating conditions, and names of parties involved with any tests performed.
- Document the procedures, forms, and submissions required to initiate and maintain the manufacturer's warranty.
- Provide written copies of applicable O&M instructions.
- Ensure that appropriate log books have been established using a factory recommended format to record critical operating parameters during equipment operation.
- Document that equipment manufacturer recommended startup and check-out procedures have been completed using manufacturer's forms.
- List rejected items, failed tests, abnormalities observed, or remedial action required by others that were not completely rectified during the construction punch list process.
- Document training provided with names and signatures of parties who received training.
- Verify that adequate clearances exist around components for cooling air and to provide access for routine service.
- Review component locations to ensure that they are not subject to temperatures beyond the manufacturer's published operating limits.
- Check that panels and enclosure locations are of the type specified and are not subject to excessive moisture, spray, or dirt.
- Confirm that fluid systems and system components (valves, sensors, radiators, coils, hoses, tanks, quick disconnects) are properly routed, supported, and free of leaks.
- Ensure that lubricants and fluids meet manufacturer requirements for the equipment installed and the anticipated operating conditions (arctic, tropical). Document that special additives or conditioners have been added to the specified concentrations.
- Provide copies of Safety Data Sheets (SDS) for materials.
- For exterior installations, confirm that enclosure penetrations are watertight and/or do not void weather rating.
- Confirm that equipment, component, and device labels, tags, or signs have been installed per specifications.

Lighting Retrofit Commissioning

- Confirm that post-retrofit group light levels meet the specified illumination requirements.
- Ensure that non-permanent or disposable batteries have been installed and tested and battery locations, types, and recommended replacement intervals have been documented.
- Test emergency egress and exit lights for proper sequencing from normal to emergency mode on battery and/or emergency power as applicable.

- Confirm that battery condition pilot lights and test switches are fully functional.
- Verify that new fixtures and/or existing fixture retrofit kits have been installed per specifications.
- For exterior installations, ensure that enclosure penetrations are watertight and/or do not void weather rating.
- Check operation of completed installation using available controls (wall switches, occupancy sensors, lighting panels) to confirm that they cycle on and off as intended.
- During operation, check that fixtures and ballasts are free of abnormal vibration or unusual noise.
- Confirm that required equipment, component, and device labels, tags, or signs have been installed per specifications.

Lighting Controls Commissioning

- Verify that lighting controls components match project specifications.
- Confirm non-permanent or disposable batteries have been installed and tested and battery locations, types, and recommended replacement intervals have been documented.
- Confirm wiring has been completed and protection devices, (fuses, breakers), have been installed per final design specifications.
- Verify disconnect and/or H-O-A switches have been installed and tested. Hand=On, Off=Off, Auto=EMCS state.
- Confirm pilot lights, control switches, touchpad's, and operating displays are fully functional.
- Verify placement, orientation, and field of view for occupancy sensors. Test and adjust sensitivity and time delay settings. Provide a list of final settings.
- Confirm location and adjustment of sensors and controls used for daylight harvesting or lumen maintenance provide the desired light levels at work surfaces and are free from unwanted interference.
- Adjust sequencing, start time, stop time, and override processing for Sweep-Off controllers.
- Set upper and lower limits of manual dimming controls as appropriate.
- Confirm schedules and interfaces with EMCS controls with the EMCS contractor.
- Provide copies of programming settings and schedules.
- Check that adequate clearances exist for fixture cooling air and routine service.
- Confirm components are not installed in locations subject to temperatures beyond manufacturer's published operating limits.

Electrical Equipment and Electrical System Commissioning

- Confirm that wiring has been completed and protection devices (fuses, circuit breakers, vacuum fault interrupters) have been installed to meet applicable codes and specifications for electrical components installed.
- Ensure that wire, cable, panel grounding, system grounding, insulation, and shielding has been checked, meets specifications, and has been tested per specifications.

- Where applicable, check overhead electrical lines to ensure that they were constructed using the specified materials and follow the approved routing.
- Provide convenience receptacle inside control panels per specifications.
- Verify that disconnect and/or H-O-A switches have been installed and tested (Hand=On, Off=Off, Auto=Control System state). If the H-O-A switch is to be wired in series with an end switch, verify that this interlock has been wired and is working correctly as well.
- Check motor rotation prior to connecting any couplings or belt drives. If applicable, verify that variable frequency drive (VFD) controlled equipment has been checked for proper rotation in both drive and bypass.
- Confirm that pilot lights, control switches, touch pads, warning buzzers, audible alarms, operating displays, are fully functional.
- Confirm that electrical insulation testing (hi-pot, motor megger) has been completed per code and test results have been documented.
- Verify that heaters (lube oil, gearbox, generator winding, enclosure) have been energized and tested. Document the settings of heaters and confirm that power supplies (breakers, panels) have been properly tagged so heaters will not be deenergized.
- Ensure that grounding and other safety systems are installed and properly tested per applicable specifications.
- Document the final voltages, taps, and selector switch settings on transformers.
- Confirm that oil level and type has been checked and recorded for oil-filled transformers.
- Functionally test any thermostatic controls or cooling fans on fan-cooled transformers.
- Confirm that non-permanent or disposable batteries have been installed and tested and battery locations, types, and recommended replacement intervals have been documented.
- For battery installations that include a battery tender or battery charger, verify that the tender or charger has been installed per specifications and is operating as intended.
- Ensure that specified electrical warning and safety labels and tags are in place.
- Ensure that wiring, panels, and equipment have proper tagging and have been checked against electrical schematics, drawings, and specifications.
- Ensure that internal compartment light fixtures have been installed as specified.
- Measure and document equipment no load and full load voltages and amperages to establish an operating baseline and ensure that they are within manufacturer's specifications.
- If applicable, confirm that switchgear and circuit breaker settings have been coordinated with new and existing electrical distribution system components.
 Document coordination study settings and approval prior to energizing equipment.

Mechanical Equipment and Mechanical System Commissioning

- Ensure that life safety systems (harnesses, climbing restraints, barriers, lockouts) have been installed, labeled, and reviewed with customer personnel.
- Verify that equipment has been installed (configuration, orientation, pitch) and supported (housekeeping pads, vibration isolators, seismic restraints) per specifications.
- Review equipment connections and accessories for installation issues that might prevent the equipment from operating properly (loose flex connectors, sharp inlet/outlet transitions, improper slope, pipe strain, inadequate space for thermal expansion).
- Confirm that shipping blocks or temporary supports have been removed prior to startup.
- Ensure that motor and drive components have been aligned and tensioned to specifications.
- Document that alignment procedures used, tolerances, adjustments, and final results for shaft-driven equipment meet or exceed manufacturer requirements and tolerances.
- If specified, ensure that baseline vibration measurements are taken for rotating equipment and that initial readings are within vibration severity guidelines.
- Check to ensure that enclosures, shrouds, guards, or access panels are securely in place.
- Review pressure gauge and temperature sensor locations to ensure that they can be read from floor level and are of proper scale or range for the medium being measured.
- Verify that thermal insulation and sound attenuation has been installed per specifications.
- Confirm that each motor, bearing, and gearbox has been lubricated, if necessary, and that remote grease lines, if specified, have been installed.
- Confirm that adequate clearances exist for routine service and replacement of motors, controls, dampers, valves, tube bundles, coils, gearboxes
- Review outside air intake openings to ensure that they are free of pollution sources, such as trash, cooling tower mists, building exhaust, vehicle exhaust, or other sources that could impact indoor air quality or deteriorate equipment.
- Ensure that equipment piping and accessories (strainers, valves, air vents, vacuum breakers, Pete's plugs) have been installed per specifications.
- Confirm that piping systems have been pressure tested per specifications.
- Verify that piping systems have been flushed, cleaned, and purged per specifications. Document that cleaning procedures were performed at specified velocities using appropriate media (air, steam).
- Where applicable, ensure that proper type and efficiency of filters or strainers have been installed, are clean, fit properly without leakage, and can be readily serviced.

Energy Management Control System Commissioning

- Provide a troubleshooting logbook by the operator workstation for use by facility operators and control technicians to document issues and contractor responses to ongoing fine-tuning.
- Confirm that sensor locations and inputs have been reviewed to ensure that readings are stable and accurately reflect the medium being measured (no stratification, excessive pulsations, system effects).
- Document that inputs, sensors, outputs, and transducers have been calibrated and that ranges match the medium being measured or devices to be controlled. Where applicable, ensure that current transformer magnetization and polarity tests have been completed per specifications.
- Document that flow control devices (valves, dampers) have been tested through full range of motion to ensure shutoff when closed, unrestricted flow when open, and smooth operation.
- If applicable, verify that interface and monitoring of any original equipment manufacturer equipment (VFD, chiller control panel, burner management system) operating parameters, faults, or alarms have been completed and tested.
- If applicable, document that remote monitoring of the control system through dial-up or internet connection has been completed and tested with lists of all phone numbers, modem settings, IP addresses, passwords
- Provide lists of user defined system variables, including default or initial values (set point, schedule, reset, alarm, gain) to facilitate future modifications and fine-tuning.
- Test control sequences and software logic by completing functional performance tests that confirm system responses through cause and effect methods.
- Collect and print trends for dynamic control loops to demonstrate proper control (timely and smooth response, lack of hunting, close to set point, minimal overshoot) over a range of system loads (weather, startup, shutdown) encountered during normal operation.
- If applicable, review graphic screens to ensure they accurately reflect equipment and systems controlled, include ranges for controlled devices, have transfers or links to quickly navigate through related subsystems, and include narrative explanation of any non-intuitive sequences.
- If applicable, enable password protection of control system programming and confirm that the password matrix of access levels and privileges has been approved and implemented per customer requirements.
- Confirm that control system and equipment failure modes (power failure, sensor failure, signal or communication loss) and alarm responses have been reviewed with a customer representative to ensure that they meet facility standard operating procedures.
- Confirm that devices with clocks or calendar functions have been checked for proper dates and times and coordinated with local daylight savings time practices.
- Confirm that equipment subject to automatic start/stop control by the control system has been reviewed with a customer representative to ensure that equipment is

properly labeled and life safety protection measures (horns, lights) are compatible with facility standard operating procedures.

Chiller and Chilled Water System Commissioning

- Confirm that wiring has been completed and protection devices (fuses, heaters, breakers) have been installed to meet specifications for the chiller installed.
- Confirm that sump or crankcase heaters are operating per manufacturer recommendations.
- Confirm proper operation of EMCS interfaces with the chiller (remote set point adjustment, remote start/stop, alarm monitoring, demand limiting).
- Test operation of safety or protection devices (pressure, flow, temperature, voltage, amperage, refrigerant) to ensure that they have been adjusted or programmed to meet specifications and are operating as intended.
- Document that chiller control panel has been programmed for the specific chiller purchased, as well as the actual chiller plant configuration (constant flow, variable flow).
- Confirm and document that minimum and maximum operating flows have been identified and adjusted within limits during test and balance.
- If applicable, document that remote monitoring or EMCS network interfaces with the chiller control panel operating parameters, faults, or alarms have been tested and calibrated.
- Verify proper operation of unique controls or features that were specified to have been provided with chiller control panel (lead/lag, load balance, hot gas bypass).
- Provide a list of chiller control panel programming parameters and settings.
- Confirm that control sequencing for ancillary equipment (chilled and condenser water pump start/stop, cooling tower interlock) meets specifications and desired control sequences.
- Verify that the chiller has been installed and supported (housekeeping pads, vibration isolators, seismic restraints) per specifications.
- Ensure that chiller piping and piping accessories (strainers, control valves, flow switches, balance valves, pete's plugs) have been installed per specifications and are free of leaks.
- Confirm that refrigerant purge unit, if applicable, is operating correctly. Verify that refrigerant relief piping is installed per manufacturer's requirements and vented outside.
- If possible, test the chiller under potential surge conditions to ensure that automatic surge protection devices (variable diffusers, load limiting algorithms) are functioning.
- Confirm that there is no abnormal noise or vibration during part- and full-load operation.
- Measure and document no load, normal load, and full load pressures, temperatures, and flows to establish an operating baseline and ensure they are within manufacturer's specifications.

Variable Frequency Drive and Variable Flow System Commissioning

• Check equipment operation through the full range of operating speeds to identify any harsh vibrations or critical frequencies.

- Document critical frequencies and ensure that they are blocked and labeled on the drive or device used to modulate speed.
- Confirm that minimum operating speeds have been reviewed for manufacturer requirements (motor cooling, gearbox oil distribution, pump stall, fan surge) and are documented and programmed into control equipment.
- If specified, verify that drive installation has been modeled using a harmonic analysis program or to ensure harmonics will not exceed specifications at the point of common coupling (PCC).
- Measure cable length between the drive output and motor terminal and confirm that it does not exceed specified maximum distance without approved compensating filtration.
- If a service disconnect is installed between a VFD and motor, confirm the disconnect has been provided with specified supervisory relays and that interlock wiring has been completed to prevent the drive from operating if the disconnect switch is opened.
- For scopes that include converting flow or capacity modulation to a new strategy (inlet guide vanes to VFDs, three-way valve to two-way valve), document that the original flow control devices have been removed and/or decommissioned as outlined in the specifications.
- Confirm that motors used are capable of operating with the VFD and cable arrangement to be used for the installation.
- If specified, ensure that motor shaft grounding rings have been installed on each motor.

Engine-Driven Generator Commissioning

- Verify that equipment has been installed (configuration, orientation, pitch) and supported (housekeeping pads, vibration isolators, seismic restraints) per specifications. Where applicable, ensure that units have been doweled and grouted after final alignment.
- Document that engine, generator, and drive components have been aligned to within specified tolerances. Use "cold check" and "hot check" methods. Confirm that generator gap has been inspected after the unit has been secured to the foundation and that manufacturer startup checklists and procedures have been followed.
- Ensure that inlet filters, silencers, and cooling systems have been installed per plans and specifications. Confirm that inlet passages have been thoroughly inspected for cleanliness and integrity and are free of items that could cause foreign object damage to engine.
- Check air inlet locations to verify that they will not expose unit to undesirable vapors, fumes, or mists during normal operation.
- Verify that exhaust systems and silencers have been installed as specified, will not
 impart undue backpressure on the unit at rated flow, and are oriented so that
 exhaust discharge will not impact adjacent structures or equipment. Confirm that any
 expansion bellows, condensate drains, and thermal or sound insulation have been
 installed per plans.
- Review fuel systems to confirm that they are capable of providing unit with specified quality and quantity of fuel under anticipated operating conditions. Confirm that fuel

- filters, driers, pumps, compressors, and regulators have been started per manufacturer recommendations.
- Confirm that post transportation tasks (shipping sleeves removed, bearings flushed, casings flushed) and pre-startup procedures (lube oil system flushing, temporary strainers, coupling lubrication) have been completed per manufacturer requirements.
- If applicable, confirm that system performance tests (at factory and/or in field) have been completed per specifications. Document that variables (fuel consumption, kWh, gal/kWh, Power Factor, pressures, temperatures) meet specifications for each test condition
- Review installation of totally enclosed water air cooled enclosures to ensure that they
 were manufactured and installed per specifications. Document that cooling systems
 (pumps, radiators, regulating valves) have been checked for proper flow and
 temperature control while generator is under load.
- Verify that applicable engine, gearbox, generator, and enclosure sensors (gas
 monitors, thermocouples, resistance temperature detectors, pressure transducers,
 vibration switches) have been field tested by completing a point-to-point checkout of
 each one.
- Provide lists of user defined system variables, including default or initial values
 (alarm settings, time delays, voltage regulator tuning parameters, governor settings, generator staging, grid power limits) to facilitate future modifications and fine-tuning.
- Ensure that governors and over-speed trip devices have been properly adjusted for application and that they have been tested using manufacturer's procedures.
 Document test results.
- Ensure that manufacturer specified sequences, strategies, and limits (pre-purge, slow roll, warm-up, acceleration, cool down, inlet air cooling, on-line wash) have been incorporated into control programming.
- Verify that critical frequencies have been clearly identified and that control programming includes blocking of these speeds as well as rapid acceleration through them.
- If applicable, ensure that emergency power has been provided to engine, generator, and ancillary equipment (programmable logic controller, telemetry, lube oil system, air compressor, water cooler, enclosure ventilation) required for the unit to operate as intended during emergency mode.
- Verify that heaters (lube oil, fuel oil, jacket coolant, generator winding, enclosure)
 have been energized and tested. Document the temperature settings of heaters and
 confirm that power supplies (breakers, panels) have been properly tagged so that
 heaters will not be inadvertently de-energized.
- If installation includes a sound or weatherproof enclosure, verify that enclosure includes specified ventilation systems, lights, monorails, or rigging systems necessary to maintain prime mover, generator, and ancillary components. Document testing of these systems.
- Check that safety and emergency support systems (combustible gas monitor, fire suppression system) for equipment and equipment enclosure have been started and tested in accordance with manufacturer recommendations and local codes.

- Verify that pressure gauges have been installed on main supply lines, at pressure reducing stations, at inlet to devices (starters, burners).
- Review normal operating adjustments (cooling water temperature, lubricating oil level, fuel pressure, inlet cooling system, drains) after startup is complete to ensure that they are within manufacturer recommended settings.
- Collect trends for dynamic control loops (combustion, governor, voltage regulator) to demonstrate proper control (timely and smooth response, lack of hunting, close to set point, minimal overshoot) over each range of system loads (startup, shutdown, light load, full load, sudden load change) encountered during normal operation.
- Confirm that cooling, fuel, lubrication, air, and hydraulic system components (valves, sensors, hoses, quick disconnects) are properly routed, supported, and free of leaks.
- Verify that filters and strainers (air, water, fuel, lube oil) have been installed and, where necessary, have been replaced after initial startup and system flush-out.
- Ensure that lubricants and fluids meet manufacturer requirements for the equipment installed and the anticipated operating conditions (arctic, tropical). Document that special additives or conditioners have been added to the specified concentrations.

Steam and Boiler System Commissioning

- Confirm that wiring has been completed and protection devices (burner management system, low limits, high limits, operating controls, draft sensors, smoke detectors, fusible links) have been installed to meet specifications for the boiler installed.
- If applicable, ensure that emergency power has been provided to the boiler and ancillary equipment and controls that are required for unit to operate as intended during power loss.
- Confirm proper operation of automated valves, operating controls, level controls, limit controls, feedwater pump controls, circulating pump controls, low water cutouts, automatic blowdown sensors, remote alarms, remote start/stop controls, remote pressure controls
- Test operation of protection and safety devices (pre-purge, over-temp, overpressure, low water, post-purge, power failure) and associated alarms to ensure that they have been adjusted per specifications and meet facility standard operating procedures.
- Document programming settings and test results for safety protection devices.
- If applicable, ensure that steam supply meets specified requirements for purity (inert or reactive components), quality (temperature and pressure), and flow (klb/hr).
- Check boiler modulating control through full operating range to verify that pressures and temperatures are maintained within acceptable tolerances, especially during load changes.
- Confirm that any continuous trim or closed loop burner controls have been calibrated and are maintaining desired set points. Document settings and programming values.
- Review boiler boil-out and first-fire procedures to confirm that they meet boiler manufacturer recommendations and are compatible with facility chemical treatment system.

- Where applicable, ensure that refractory curing procedures are followed during firstfire. If condensate drains are opened during curing, document results of curing process and installation of plugs after procedure is complete.
- Confirm that discharge header on steam boilers meets manufacturer recommendations to minimize any possibility of boiler water carryover.
- Ensure that burner motor, jackshafts, and operating cams, if applicable, have been lubricated, aligned, and/or tensioned to manufacturer specifications.
- Document size, setting, and capacity of pressure relief or combination temperature and pressure relief valves or devices. Ensure that devices are located and piped per specifications.
- Review location and sizing of combustion air dampers and louvers, if applicable, to
 ensure that they are adequately sized and do not pose a risk of dumping
 unconditioned air on unprotected piping. Confirm that dampers open and close by
 sequence of operations.
- Test boiler discharge isolation valves and check valves, if applicable, to ensure that they properly seal against normal system operating pressure.
- Document that burner nozzles and combustion air baffles, if applicable, meet manufacturer recommendations for fuel sources and boiler elevation above sea level.
- Confirm that there are no abnormal noises or pulsations during part- and full-load operation and that sight glasses are free of abnormal foaming or bouncing.
- Check that boiler blowdown systems (slow-acting, quick-acting, and continuous) have been tested under operating temperature and pressure.
- If a blowdown cooler or tempering device has been installed, ensure that it has been adjusted to maintain discharge temperatures within specified range. Document final settings.
- Verify that breeching and flue piping is installed and insulated per specifications and that discharge configuration meets manufacturer recommendations.
- Confirm that boiler and associated piping has been cleaned per specifications and chemical treatment program has been initiated per manufacturer recommendations.
- Measure and document operating temperatures and pressures, fuel pressure, fuel flow, stack temperatures, and boiler efficiency with available fuels to establish an operating baseline and ensure that they are within manufacturer's specifications.

Steam trap Commissioning

- Where applicable, (traps with leak detection sensors), confirm that non-permanent or disposable batteries have been installed and tested and battery locations, types, and recommended replacement intervals have been documented.
- Verify that typical operating temperatures at the installation location are not expected to exceed manufacturer's published limits.
- Ensure remote communications are operational and that expected signals (trap open, trap cold) can be collected using the specified supervisory equipment.
- Confirm that appropriate type trap (inverted bucket, float & thermostatic, orifice) was installed per final design drawings or specifications.

- Where applicable, document that the trap orifice or metering components match the sizes indicated in the specification for the particular piece of equipment or service.
- Inspect steam trap and adjacent piping from trapped device through to condensate return header to verify steam trap has been installed, oriented, and supported per specifications.
- Confirm piping to and from steam trap has been properly supported and pitched.
- Verify adequate clearances exist for routine service of renewable components.
- Check that piping accessories, (strainers, isolation valves, check valves), have been installed per specifications and that the completed system is free of leaks.
- Verify thermal insulation, if applicable, has been installed or replaced per specifications.
- Ensure steam trap has been primed and fill ports specified for continued preventive maintenance have been installed.
- Verify piping to and from the steam trap has been cleaned per specifications and chemical treatment program has been initiated per manufacturer recommendations.
- Check steam trap in operation to see if it is cycling as expected and, if possible, confirm the equipment served by the steam trap is operating, (heating, sterilizing), as designed.
- Confirm required steam trap labels, tags or signs have been installed per specifications.

Photovoltaic System Commissioning

- Verify that photovoltaic (PV) system was constructed, shipped, and installed with options specified (PV panels, panel mounting racks, inverters, inverter interfaces, disconnects, isolation transformers, safeties, meters, alarms, displays, wiring, conduit)
- Provide a complete list of nameplate data and serial number(s) for PV system components.
- Confirm wiring and protection devices, (fuses, heaters, breakers), have been installed to meet specifications for PV system components installed.
- Ensure pilot lights, control switches, touchpads and operating displays are fully functional.
- Check and document that PV system start-up, transfer to grid, transfer from grid, shutdown and failure modes have been tested.
- Document factory recommended start-up and check-out procedures have been completed.
- Measure and document both Direct Current (DC) open circuit voltage (Voc), short circuit current (Isc), and peak power (Pp), and Alternating Current (AC) voltage, frequency, amperage, and power factor at multiple sunlight and temperature conditions to establish an operating baseline and ensure they are within manufacturer's specifications. Ensure that factory performance test results of modules have been received and properly recorded.

- Confirm layout, orientation and slope/tilt of PV panel modules and grid system match specifications.
- Ensure PV system component locations are not subject to temperatures beyond manufacturer's published operating limits.
- Check that adequate clearances exist for cooling air and routine service of components.
- Verify locations of electronic enclosures are not subject to excessive moisture, spray, or dirt.
- Make sure exterior penetrations are watertight and/or do not void weather ratings.
- Ensure that mounting hardware does not subject modules to physical stress, i.e., check that structural elements are straight and not twisted.
- Perform visual inspection of modules to check for cracked cells.
- Check the location and orientation of sensors, (anemometers, air temperature, PV
 cell temp, pyranometer) to ensure they are installed per manufacturer's instructions
 and will not experience interference from adjacent surfaces or structures.

DOCUMENTATION

As mentioned above, QESP will prepare a detailed commissioning plan for the City project. This plan will be prepared as soon as final design, equipment selections, and control sequences are completed. The commissioning plan will be prepared with input from major subcontractors and vendors and will outline the design intent, objectives, organization, schedule, documentation requirements, and testing procedures to be used.

After the commissioning plan has been drafted, QESP will schedule meetings with appropriate commissioning team members to review the proposed plan and document relevant corrections and clarifications.

Commissioning activities and milestones will be identified in the QESP construction schedule to communicate how systems will be brought on-line. As the project transitions from construction to startup, a brief outline of ongoing commissioning activities will be included in the agendas for regular job meetings and will be documented in the meeting minutes. During startup, detailed look-ahead schedules will be generated to coordinate commissioning tasks so that appropriate commissioning team members can participate.

Actual commissioning test forms for the City project will include a mixture of QESP test forms, customized subcontractor test forms, and standard manufacturer installation and startup checklists. Since the commissioning process ranges from simple static tests performed during construction (such as piping pressure tests) to complex dynamic tests (such as control system functional testing), it is typically impractical to collect and submit each and every test form and checklist. The commissioning team will discuss each commissioning procedure and agree upon the forms and documents to be used to document it prior to the task being performed. Where requested, QESP will submit copies of the actual test forms that will be used to the City personnel for review and approval.

Where appropriate for the technologies involved, commissioning forms may also include specialized electrical, thermal, or vibration studies performed by consultants. Customized test

forms will be generated by QESP and subcontractors as needed to outline the procedures to be followed during testing of integrated systems or automated control sequences.

Upon completion of project commissioning, the QESP Commissioning agent will perform a final quality control check of commissioning documents and support the submission of project close out documents. The commissioning submittals will contain relevant commissioning documentation collected during the project, such as completed checklists, test forms, start-up sheets, balance reports, and acceptance forms. Descriptions of any abnormalities or unusual observations will also be included.

SCHEDULE U

Standards of Comfort

This Schedule U sets forth the acceptable standards of comfort that the QESP shall maintain for heating, cooling, lighting levels, hot water temperatures, humidity levels, and/or any special conditions for occupied and unoccupied areas in each building in the Project Site(s).

Table U-1 includes the standards of comfort for the project.

Table U-1: Standards of Comfort

Table U-1. Sta	ildards of Colffiort			
Type	Acceptance	Status and Setting		
Space Cooling	Occupied: 72°F to 76°F			
	Unoccupied: 78°F to 80°F	W - 1 (W		
Space Heating	Occupied: 68°F to 72°F			
	Unoccupied: 55°F			
Domestic Hot	Supply to Kitchens: 140°F

SCHEDULE V

QESP's Training Responsibilities

This Schedule V includes the training program for Facilities personnel, including the duration and frequency of the specified training, any provisions for ongoing training, commitments to train newly hired Facilities personnel, and training with respect to possible future equipment or software upgrades.

QESP's training personnel will provide or arrange for instruction on the troubleshooting, maintenance, emergency, emergency shut-down procedures, technical functions, warranty provisions, and repair of equipment and systems modified or installed under each ESM. Training will be conducted on-site using actual ESM equipment wherever possible. QESP will coordinate training with the City, and will provide a minimum ten business days' notice in advance of such training. QESP will demonstrate that City has attended training. The City may record the training sessions at their own expense for future training needs.

Table V-1 summarizes the amount of training to be provided for each ESM.

Table V-1: Training Responsibilities

	ESM	Duration	Frequency	Description
1	Interior Lighting Improvements & Controls	1 hour	Annually during the 5 year Guarantee Period	QESP project manager and lighting vendor will review O&M manual and warranty procedures.
2	Exterior Lighting Improvements	1 hour	Annually during the 5 year Guarantee Period	QESP project manager and lighting vendor will review O&M manual and warranty procedures.
3	Variable Speed Chillers & Pumps	6 hours	Annually during the 5 year Guarantee Period	On-site training by QESP project manager and chiller vendor of chiller startup, shutdown, control panel, sequences and warranty procedures.
4	AHU Damper Refurbishment	1 hour	Annually during the 5 year Guarantee Period	On-site training by QESP project manager, sequences.
5	Energy Management System Upgrades & Expansion	16 hours	Annually during the 5 year Guarantee Period	Onsite training provided by QESP project manager and controls manufacturer's representative will be conducted at the affected buildings using the installed controls components and workstation.
6	Building Insulation	30 minutes	Annually during the 5 year Guarantee Period	QESP project manager will review as-built documentation and warranty procedures.
7	Pipe & Fitting Insulation	30 minutes	Annually during the 5 year Guarantee Period	QESP project manager will review as built documentation and warranty procedures.

	ESM	Duration	Frequency	Description
8	Steam Trap Repair & TRVs	1 hour	Annually during the 5 year Guarantee Period	QESP project manager will review as built documentation and warranty procedures.
9)	Plug Load Controls	1 hour	Annually during the 5 year Guarantee Period	QESP project manager will review as built documentation, system operation and warranty procedures.
1 0	Walk-in Cooler Controls	1 hour	Annually during the 5 year Guarantee Period	QESP project manager will review as built documentation, system operation and warranty procedures.
1	Steam Boilers	6 hours	Annually during the 5 year Guarantee Period	On-site training by QESP project manager and boiler vendor of boiler startup, shutdown, control panel, sequences and warranty procedures.
1 2	Hot Water Boilers & Pool Heating Systems	6 hours	Annually during the 5 year Guarantee Period	On-site training by QESP project manager and boiler vendor of boiler startup, shutdown, control panel, sequences and warranty procedures.
1 3	Solar Photovoltaics	2 hours	Annually during the 5 year Guarantee Period	On-site training by QESP project manager and solar vendor of photovoltaic system startup and warranty procedures.
1 4	New Electrical Switchgear & Backup Power Generation	2 hours	Annually during the 5 year Guarantee Period	On-site training by QESP project manager and generator vendor of generator startup, shutdown, control panel, sequences.

Educational Outreach

Addressing energy efficiency at the building level is a critical first step in achieving energy savings, but not addressing the energy use of the people inside these buildings leaves a piece of the savings pie on the table. Our Green Operations (GO) team works to ensure this piece is included, achieving quick, significant, and sustainable savings. Our behavior change program is unlike any other. It is tailored to each customer's specific energy conservation challenges and strengths. Our program is intrinsically motivated: when people understand the benefits and consequences of energy consumption, they change for the right reasons. This change is more effective, sustainable, and exponential compared to change based on external rewards.

NORESCO's Energy Conservation Through Behavior Change® (ECTBC) program is the creation of Dr. Scott Finlinson, an Industrial Organization psychologist whose doctoral dissertation became the foundation for the program today. With over fifteen years of experience in changing behavior, Dr. Scott Finlinson and his highly-skilled team create custom, comprehensive behavior change programs for a variety of organizations. NORESCO's proprietary Human Behavior Energy AuditSM (HBEA) is the first step to identifying and analyzing

opportunities for Energy Conservation Through Behavior Change®. This "people side" of performance contracting empowers organizations to augment energy savings by creating a culture of conservation.

Human Behavior Energy AuditSM

The HBEA is an exploratory research process that identifies and assesses current levels of behavior-related energy factors. Both intrinsic and extrinsic barriers, and facilitators, toward energy itself and energy consumption will be explored and assessed throughout the organization. Example factors include energy attitudes, knowledge, social norms, perceptions of control, as well as behaviors. Once identified, assessment of these factors establishes a baseline of current human behavior with regards to energy use. Various research methods are employed to collect this data, including one-on-one interviews, focus groups, and surveys. Next, using a combination of organizational archival data with HBEA interviews, focus group and survey results, specific behaviors are identified that have a significant impact on the environment and your energy costs. Considering that building occupants typically control 30% of a building's energy consumption, the HBEA is a powerful measurement tool that identifies the most impactful energy behaviors and allows your organization to achieve the greatest return on investment.

- Talk to People: Our specialists talk to people to better understand an organization's culture and needs.
- Data Collection: We collect data on levels of energy conservation attitudes, knowledge and behaviors of building occupants.
- Establish Baseline: By establishing an energy baseline, program effectiveness can be measured. Comparing post-program data to the baseline creates quantifiable results that can be used to modify the program for increased effectiveness.

Overview

- Meet on-site with organization stakeholders
- Conduct on-site interviews and focus groups with groups of similar energy users
- Design organization-specific, web-based survey for email distribution including items discovered during the interview/focus group stage
- Work with organization to distribute survey to building(s) occupants
- Analyze all HBEA data, including interviews, focus groups, and survey

Deliverables

- Web-based survey and announcement
- Provide survey incentives not to exceed \$1,000
- Comprehensive HBEA report detailing findings
- Digital copy of summary-level focus group and survey data
- You will be assigned a Green Operation representative who will guide you through the process and be available for questions and concerns.

SCHEDULE BB

QESP Maintenance Responsibilities

Performance period service responsibility begins with the development of O&M Manuals during the construction phase. NORESCO will compile these manuals and present them to the City's O&M team following execution of the Certificate of Substantial Completion of all ESMs. They will include performance specifications and information to set up a planned maintenance program for the service technicians and facility staff that will perform maintenance. These documents will be incorporated into the training programs for the project. Responsibility for maintenance and repair will be clearly delineated in these manuals.

The City is generally responsible for all operations, maintenance, repair, and replacement of NORESCO installed equipment to ensure a comfortable environment for students, staff, and visitors, and that optimal equipment performance and savings persist throughout the contract term. Our approach to meet this objective is to augment the City's facilities' staff with a Site Manager who will work with the City facility staff onsite for a maximum of 600 hours per year. The Site Manager will be responsible for the following:

- ▶ Coordinate subcontracted services and provide oversight of all maintenance, repair, and replacement activities for equipment for which NORESCO is responsible as outlined in Table BB-2.
- ▶ Provide annual refresher training on the installed ESMs, as well as training for new hires and newly assigned managers or supervisors when requested in accordance with the terms of Schedule V.
- ▶ Implement Educational Outreach through NORESCO's Energy Conservation Through Behavior Change® (ECTBC) program in accordance with the terms of Schedule V.

NORESCO proposes that the City retain assignment for all day-to-day operations of all new and existing equipment and serve as first responder to all service calls for all ESMs and equipment installed as part of this project as a continuation of current practice. Operations include starting, stopping, scheduling, adjusting, and monitoring equipment.

NORESCO will provide an onsite Site Manager to serve as an extension of the City facilities staff, and support the City's efforts in reporting utility savings. Table BB-1 lists our Performance Period Team members and their roles.

Table BB-1: QESP Performance Team

Mike Richardson	Þ	Leads NORESCO's team
Performance Period Manager	₽	Oversees and manages maintenance activities and quality control
John Feeney	Þ	Coordinates all on-site service efforts and subcontracts

Regional Manager	
Site Manager – TBD	Oversees maintenance activities for new controls systems, and
	onsite subcontracted maintenance effort
	Responds to warranty/non-warranty calls
Remote Monitoring Center	▶ NORESCO's 24/7 call center can receive calls, open service
	requests, and follow up on afterhours issues with onsite staff

Table BB-2 describes the QESP maintenance responsibility for each of the proposed ESMs. The overall strategy is to perform the maintenance for specific ESMs, as well as quarterly or annual inspections to ensure proper maintenance and operation of the other installed equipment.

During the contract term, NORESCO will monitor O&M functions for all ESMs on a quarterly basis. Monitoring will be performed by conducting onsite inspections on a sample of equipment, and reviewing the associated maintenance and repair records for each ESM. The total sample size for all equipment will be determined by the amount of equipment to which NORESCO can gain access and inspect within a 2-day timeframe for each inspection. The Regional Manager or Site Manager will complete O&M Inspection Reports on a quarterly basis. Any issues identified during the quarterly inspections that are likely to impact energy consumption will be reported to the customer at the time of discovery. The quarterly reports will be compiled for inclusion with the Annual Verification Report (AVR). The reports will include a summary of activities that occurred onsite during the visits, the status of the inspected equipment, and the status of any maintenance or repair activities. The reports will indicate if all O&M activities have been performed in accordance with the required specifications and will identify deficiencies and outline remedies.

SCHEDULE CC

City's Maintenance Responsibilities

This Schedule CC sets forth the City's operations and maintenance responsibilities for the installed equipment. The City shall, at its expense, maintain the Project Sites in good working order during the SOW term. Except for the limited activities that are to be performed by QESP as outlined in *Schedule BB: QESP's Maintenance Responsibilities*, the City shall be responsible for servicing and maintaining at its own cost (i) the ESMs and all other equipment that compose the ESMs and (ii) all other equipment that is attached thereto and/or is integral to the proper functioning of the ESMs. QESP shall provide to the City the operations and maintenance manuals that outline operations and maintenance duties for all Equipment. Department maintenance for the installed ESMs will begin after the Substantial Completion of each ESM.

In additional to the requirement below, the City will need to keep a log noting the hours of operation of the emergency generator installed as part of ESM 14. The emergency generator is designed to be used less than 300 hours in any consecutive twelve month period. In the event the City operates the generator in a manner that exceeds those limits, the City may need to obtain an individual air permit for the generator's operation at its expense.

SCHEDULE DD

Facility Maintenance Checklist

This Schedule DD is a checklist which the City shall maintain to record and track its compliance with operations and maintenance responsibilities of the Project Site(s) personnel. The checklist shall be available for inspection by the QESP upon request.

Below is a high level list of suggested maintenance tasks to be performed by the City for the installed Equipment. Where manufacturer specific tasks and intervals are provided as part of the operation and maintenance manuals delivered to the City at the completion of the Interim Period, those tasks and intervals take precedence over the table below. The intervals specified in Table DD-1 below are: (Q) Quarterly, (SA) Semi-Annual, (A) Annual, and (SP) Special Inspections.

Certificate of Final Acceptance of All ESMs/Final Completion

Certificate of Final Acceptance of All Installed ESMs and Final Completion of the Project

Owner hereby acknowledges Final Acceptance of all ESMs, and Final Completion of the
project described in the Contract between the City and NORESCO dated
The date of Final Completion is the date certified by the Owner that
the Work has been installed, functionally tested and all punch-list items completed in
accordance with the Contract Documents, so that the Owner has possession of the
ESMs and can use the ESMs for their intended use. Owner hereby accepts the ESMs
listed hereto after full inspection thereof as complete for all purposes of the Contract.

The Commencement Date shall be the first day of the month after the month in which the Final Acceptance was certified by the Owner.

Owner agrees to make the required payment(s) to NORESCO as set forth in the Contract.

EXECUTIVE SUMMARY:

INVESTMENT GRADE ENERGY AUDIT REPORT

EXECUTIVE SUMMARY FOR THE CITY OF WATERBURY'S ENERGY-SAVINGS PERFORMANCE CONTRACT

The City of Waterbury (the City), facing challenges associated with aging buildings that have inefficient energy-related infrastructure, selected NORESCO as its Qualified Energy Service Provider (QESP) through a competitive solicitation process to complete an investment grade energy audit (IGEA) that would thoroughly investigate and define opportunities for the implementation of energy-saving projects. The IGEA maps out a balanced approach to prioritize and implement the most cost-beneficial and critically needed energy-related infrastructure upgrades that will be funded through a demonstrated reduction in annual expenses for its City and school buildings.

NORESCO is pleased to have been selected as the City's QESP partner to audit, engineer, and construct energy savings projects throughout its buildings. NORESCO, with local offices in Shelton and Wallingford, has a proven 32-year history of delivering high-quality performance-based projects to public entities in New England. The implementation of the recommended energy savings measures (ESMs) in the comprehensive IGEA will enable the City to become a leader in sustainability, create an optimum environment for working and learning, improve its economic viability by reducing energy use, and improve the quality of life of its residents, visitors, businesses and institutions by reducing greenhouse gas emissions. The City's investment of public funds toward this project will serve the dual win-win purpose of upgrading facilities with critically needed improvements while providing employment opportunities amongst residents, as envisioned by the "Good Jobs Ordinance."

City and school personnel have worked together with NORESCO in a collaborative, thorough, and detailed project development process to develop and review the ESMs included in the scope of work contained in this IGEA. We appreciate the City's commitment and support, as well as all the meetings, reviews, discussions, and guidance that were necessary to develop the rigorous engineering analysis and the resultant recommended comprehensive scope of work package contained in the report.

Some key building, operational and sustainability improvements outlined in the IGEA include:

- A fast-track mobilization plan to install 30 new boilers and associated equipment in 10 schools and the Chase Building that have aged heating systems in danger of failing.
- Extensive energy management system upgrades, including replacement of high maintenance pneumatic controls with electronic direct digital controls for more precise equipment operation and savings, including almost 4,800 control points across school and City buildings.
- New high-efficiency variable speed-drive chillers to replace existing chillers at the end of their useful service lives and contain old, environmentally unfriendly refrigerant.
- Retrofits and replacements of 31,119 interior lighting fixtures with 68,226 new LED lamps in City and school buildings.
- A commitment to cost-effective renewable energy at the Duggan School & Police Headquarters.

Table 1: Summary of Energy Savings Measures

	Energy Savings Measures	Implementation Price (Note 1)	Estimated Incentives	Anticipated Annual Cost Savings	Simple Payback Net of Incentives
1	Interior Lighting Improvements & Controls	\$2,099,167	\$489,680	\$344,408	4.7
2	Exterior Lighting Improvements	\$986,487	\$264,504	\$127,455	5.7
3	Variable Speed Chillers & Pumps	\$1,205,847	\$35,049	\$43,149	27.1
. 4	Air Handling Unit Damper Refurbishments	\$321,805	\$46,024	\$29,038	9.5
5	Energy Management System Upgrades & Expansion	\$5,345,037	\$1,536,934	\$621,167	6.1
6	Building Weatherization	\$584,590	\$146,921	\$47,528	9.2
7	Pipe & Fitting Insulation	\$804,356	\$268,882	\$79,239	6.8
8	Steam Traps & Thermostatic Radiator Valves	\$784,163	\$272,573	\$93,420	5.5
9	Plug Load Controls	\$176,810	\$60,372	\$27,543	4.2
10	Walk-In Cooler Controls	\$147,423	\$29,329	\$13,115	9.0
11	Steam Boilers	\$5,984,134	\$103,757	\$69,948	84.1
12	Hot Water Boilers & Pool Heating Systems	\$7,407,670	\$445,829	\$153,827	45.3
13	Solar Photovoltaics	\$305,388	\$0	\$27,863	11.0
14	New Electrical Switchgear & Backup Power Generation	\$1,255,855	\$0	\$0	N/A
	Project Totals	\$27,415,059	\$3,699,854	\$1,677,700	14.1

Note 1: This Implementation Price includes a \$225,738 total credit to the City consisting of a reduction of ECG's Consulting Services fee, as well as, a reduction of NORESCO's overhead and profit. The original Implementation Price before this credit was applied was \$27,640,797.

Table 2: Annual Energy and Cost Savings

Energy Savings Measures	Efectric (kW) Savings	Electric (kVA) Savings	Electric (KWh) Savings	Natural Gas (CCF) Savings	Anticipated Energy Costs Savings	Anticipated O&M Costs Savings	Anticipated Annual Cost Savings

Executive Summary Page | 3

Illustrative Cash Flow for the City of Waterbury Project

NORESCO recognizes that the City has finance and term options to select the most advantageous method to fund the project scope. The cash flow on the following page illustrates the potential Tax-Exempt Municipal Lease (TELP) funding option. Table 3 provides a cash flow positive net of the anticipated savings, payments, and utility incentives over a relatively short 15-year term, after project implementation.

Table 3: Illustrative Cash Flow Based on the Following Page Assumptions

Net Cash Flow	0\$	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$82,552	\$1,238,286

\$1,353,600	Anticipated Savings During Construction Amount (-)
\$27,415,059	Project Implementation Price:

Cash Flow Assumptions:

- A 24-month construction and commissioning period prior to commencing the repayment term.
- First-year savings based on 3-year average utility rates for each specific building from 2013-2015, and an annual energy escalation rate of 3.50%.
- Year O represents the cumulative estimated savings that will be achieved during the construction period as ESMs are completed.
- Net of utility incentives based on Eversource Project Caps and Incentive Levels effective January 2016
- Operating lease with stepped payments with level net cash flow to match savings at 2.50% for 15-year term.
- Project Implementation Price includes ECG consulting service fee.

Environmental Impact of Proposed Energy Savings Measures

NORESCO is a proud member of the U.S. Green Building Council and Clinton Climate Initiative and a long-time Energy Star® Business Partner. In addition to the direct positive economic benefit this project will have to the City, this project will provide significant environmental benefits to the City and the surrounding community, consistent with the City's CO₂ reduction policy objectives.

Quantified in Tables 4 and 5 are the greenhouse gas emission reductions that will occur as a result of new higher efficiency equipment replacing the existing old, less efficient systems as well as new controls that will limit the equipment's use to when only needed by the building occupants.

Table 4: Energy Savings

Energy Source	Units	Value
Electricity	5,835,970	Kilowatt Hours
Natural Gas	551,022	Hundred Cubic Feet

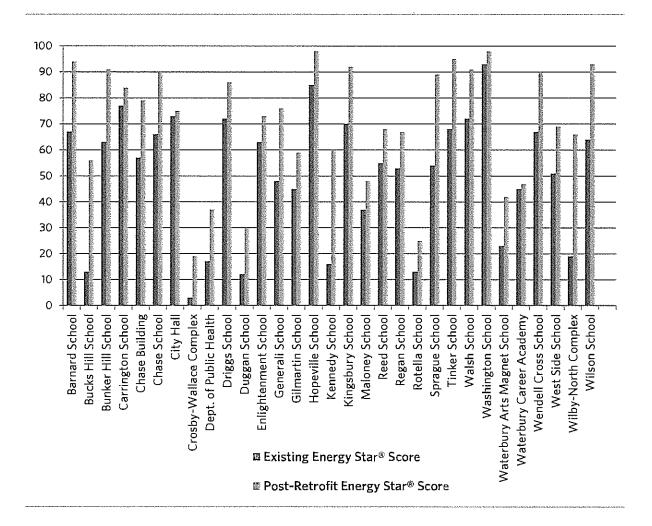

Table 5: Annual Emissions Reductions

Emission Type	Reductions
Carbon Dioxide (CO ₂)	13,228,626 lbs per year
Sulfur Oxides (SOx)	2,609 lbs per year
Nitrogen Oxides (NO _x)	14,046 lbs per year
Equivalent Acres of Trees Planted	1,811 acres
Equivalent Cars Removed from the Ro	

Energy Star® Rating Impact of Proposed Energy Savings Measures

NORESCO is a long-time Energy Star® Business Partner. The below Energy Star® scores are on a percentile basis, reflecting the improvements in the percentage of similar buildings outperformed by the specified building based on a standardized analytical framework.

A. FACILITY PROFILE

1. Baseline Energy Consumption & Costs

NORESCO has collected and analyzed utility information for each City facility included in the project. All of the natural gas and electricity bills were collated to form an annual utility consumption baseline for each facility. NORESCO reviewed three years (January 2013 to December 2015) of historical energy data contained in the utility bills and averaged the consumption across the three years to create a representative starting point for baseline analysis. Energy consumption across the three years showed little variance, so, therefore, the three-year data set was averaged to determine baseline energy consumption. NORESCO also reviewed the utility data against historical weather data. The review found that historical heating degree days for Waterbury were within 1% of the heating degree days associated with the three year billing period. Therefore, no adjustment for weather has been included in the development of the baseline energy consumption.

Adjustments to historical energy consumption have been made to three buildings, these buildings being the Crosby-Wallace Complex, Wilby-North End Complex, and West Side Middle School. These adjustments account for operational deficiencies associated with the HVAC systems that will be corrected as part of the project. The baseline energy consumption in these buildings has been increased; however the overall increase to the total project baseline energy cost is a relatively small 2% increase.

Baseline energy consumption was multiplied by the current effective utility rates to determine baseline utility costs. NORESCO's review of the utility bills showed an increase in each year. Therefore NORESCO is using the most-recent utility bill data reviewed to determine baseline energy costs.

Utility costs associated with water and sewerage charges for the buildings were collected and analyzed. Given the relatively low rates for both water and sewer, it was determined that there would be no cost effective water or sewer ESMs included in the project.

Table A-1 provides the averaged billed baseline and adjusted utility baseline across the last three years for each building's electricity and natural gas consumption and costs.

Building	Tinker School	Walsh School	Washington School	Waterbury Arts Magnet School	Waterbury Career Academy ⁶	Wendell Cross School	West Side School ⁷	Wilby-North Complex7	Wilson School	Buckingham Garage	Scovill Garage	Totals

1: Barnard School was closed in 2013 and most of 2014, and then reopened in the September 2014. Any utility consumption prior to September 2014 is not consistent with the current building operations; therefore, we are using January 2015 to December 2015 as the baseline. 2: Carrington School completed a building extension in 2013, which increased the building square footage from 45,916 to 127,391. Therefore, we are using January 2014 to December 2015 as the baseline to account for the consumption for the current square footage of the building.

3. Chase School has two electric meters with different rate structures, therefore, this electric baseline represents the combined average kWh consumption for both meters.

4: City Hall was recently renovated and reliable historic data was available for March 2015 to February 2016, therefore, we used this as the baseline.

5: Crosby-Wallace Complex historic electrical data was available for January 2014 to December 2015; therefore, we used this as the baseline.

6: Waterbury Career Academy opened in 2013; therefore, we are using January 2014 to December 2015 as the baseline.

ventilation required. In three schools, we noticed that many of the outside air damper assemblies were inoperable, which minimizes the resulting utility consumption and costs. Per the RFP, and 7: During the course of our audit, NORESCO evaluated the existing conditions of the air handling equipment and its ability to operate properly, specifically to introduce the proper amount of based on our design due diligence, we recommend improvements to these schools to correct these existing system deficiencies. This requires an adjusted average project baseline energy consumption and associated cost to account for the increase in ventilation to meet Code requirements.

2. Description of Buildings

NORESCO has audited the following buildings for inclusion in this project. The total square footage is 3,421,732. Table A-2 below provides a list of the buildings.

Table A-2: Description of Buildings

Building	Address	Sq.Ft.	Construction	Depta
Barnard School	11 Draher Street	48,600	1898	BOE
Bucks Hill School	330 Bucks Hill Road	77,194	1953	BOE

3. Energy Star® Scores

The Energy Star® ratings for each building are listed in Table A-4 and graphically in Graph A-1. Energy Star® scores and on a scale from 1 to 100, with a score of 50 representing median energy performance relative to similar property types nationwide. Scores of 75 of greater indicate a building is a top performer and it may be eligible for Energy Star® certification. The building comparison data is sourced by Energy Star® through the United States Department of Energy Information Administration Commercial Building Energy Consumption Survey (CBECS) survey conducted once every four years. The calculations take into account the impact of weather variations as well as key property use details such as the building square footage, percent occupancy, and amount of heated and cooled space.

Several buildings do not have an Energy Star® score because the Energy Star® Portfolio Manager only provides scores for 21 of the over 80 property types available in the Energy Star® Portfolio Manager. Electric and natural gas consumption for each building was entered for the years 2013, 2014, and 2015. The Energy Star® scores are based on the most recent year of data -- 2015.

SECTION B: UTILITY INFORMATION

B. UTILITY INFORMATION

1. Rate Summary Table

NORESCO analyzed the most recent electricity tariffs from the City's electric utility company, Eversource. The most recent tariffs were chosen to calculate the savings for this project, as they are the most up-to-date representation for how the utility company charges for demand, power factor, and consumption.

For the electricity supply cost, NORESCO used the most recent contract with the City's electricity supplier, Direct Energy. A summary of the most recent electricity rates for each building are provided in Table B-1. Note that there are five electricity rates structures (30, 37, 40, 56, and 58) across the buildings.

Table B-1: Electricity Rates for Calculating Savings

	Secret 4	Margin	al Electricit	y Rates	Blended Electricity Rates
Building	Rate Code	\$/kW	\$/KVA	\$/kWh	\$/kWh
Barnard School	30	\$19.49	_	\$0.0974	\$0.1550
Bucks Hill School	30	\$19.49		\$0.0974	\$0.1671
Bunker Hill School	40	-		\$0.1642	\$0.1642
Carrington School	37	\$1 1. 69	•	\$0.1391	\$0.1868
Chase Building	30	\$19.49	F	\$0.0974	\$0.1566
Chase School (Note 1)	30 & 40	\$6.34	-	\$0.1461	\$0.1743
City Hall	37	\$11.69	-	\$0.1391	\$0.1680

Note 1: There are two meters with different rate structures (Rate 30 & 40), so this is a weighted average. Rate 40 does not have a demand unit cost, only energy.

Like the electricity, the natural gas rates are based on the latest available data. Natural gas is both distributed and supplied by Eversource. The last fiscal year of data (January 2015 to December 2015) was analyzed to calculate the latest natural gas utility rate by dividing the annual cost of natural gas by the consumption over the same annual period. The last fiscal year of natural gas costs, consumption, and rates are summarized in Table B-2.

2. Rebate & Subsidy Information

NORESCO has extensive experience with utility incentive programs. We will work diligently to obtain any available incentives. All incentive monies will be credited to the City. NORESCO has conducted a preliminary evaluation of the electric and gas incentives offered by Eversource. Incentives are available for several of the technologies under their Comprehensive Project Initiative for Existing Building Retrofit. The Comprehensive Initiative offers greater incentives than single measure projects by utilizing benefits from quicker savings measures such as LED lighting to support measures that have a longer payback if done individually.

The Comprehensive Initiative incentive levels require that multiple buildings are included in the project and the savings are generated from both electricity and natural gas. This project meets both of those criteria. In addition, the incentive levels are detailed below:

- Total Project Incentive is up to 50% of installed cost
- Neither electric nor gas can exceed 85% of the total project savings
- Comprehensive "Project Cap" for all ESMs is \$0.40/kWh saved and \$3.50/CCF saved

The estimated Comprehensive Initiative incentive apportioned out by ESM is summarized in Table B-3.

Table B-3: Summary of Utility Incentives

	Energy Savings Measures	Estimated Incentives
1	Interior Lighting Improvements & Controls	\$489,680
2	Exterior Lighting Improvements	\$264,504
3	Variable Speed Chillers & Pumps	\$35,049
4	Air Handling Unit Damper Refurbishments	\$46,024
5	Energy Management System Upgrades & Expansion	\$1,536,934
6	Building Weatherization	\$146,921
7	Pipe & Fitting Insulation	\$268,882
8	Steam Traps & Thermostatic Radiator Valves	\$272,573
9	Plug Load Controls	\$60,372
10	Walk-In Cooler Controls	\$29,329
11	Steam Boilers	\$103,757
12	Hot Water Boilers & Pool Heating Systems	\$445,829
13	Solar Photovoltaics	\$0
14	New Electrical Switchgear & Backup Power Generation	\$0
	Totals	\$ 5 4699,8354

Note: The estimated incentive values shown in Table B-3 are based on \$0.30/kWh saved and \$3.50/CCF saved.

SECTION C:SAVINGS OPPORTUNITIES SUMMARY

C. SAVINGS OPPORTUNITIES SUMMARY

1. Summary Table of All ESMs

The savings opportunities for the recommended energy savings measures (ESMs) are summarized in Table C-1, with further breakouts in Table C-2. Table C-3 lists includes the ESM-by-ESM breakdown.

Table C-1: Savings Opportunities for the Energy Savings Measures

	Energy Savings Measures	Implementation Price (Note 1)	Estimated Incentives	Anticipated Annual Cost Savings	Simple Payback Net of Incentives
1	Interior Lighting Improvements & Controls	\$2,099,167	\$489,680	\$344,408	4.7
2	Exterior Lighting Improvements	\$986,487	\$264,504	\$127,455	5.7
3	Variable Speed Chillers & Pumps	\$1,205,847	\$35,049	\$43,149	27.1
4	Air Handling Unit Damper Refurbishments	\$321,805	\$46,024	\$29,038	9.5
5	Energy Management System Upgrades & Expansion	\$5,345,037	\$1,536,934	\$621,167	6.1
6	Building Weatherization	\$584,590	\$146,921	\$47,528	9.2
7	Pipe & Fitting Insulation	\$804,356	\$268,882	\$79,239	6.8
8	Steam Traps & Thermostatic Radiator Valves	\$784,163	\$272,573	\$93,420	5.5
9	Plug Load Controls	\$176,810	\$60,372	\$27,543	4.2
10	Walk-In Cooler Controls	\$147,423	\$29,329	\$13,11 5	9.0
11	Steam Boilers	\$5,984,134	\$103,757	\$69,948	84.1
12	Hot Water Boilers & Pool Heating Systems	\$7,407,670	\$445,829	\$153,827	45.3
13	Solar Photovoltaics	\$305,388	\$0	\$27,863	11.0
14	New Electrical Switchgear & Backup Power Generation	\$1,255,855	\$0	\$0	N/A
	Project Totals	\$27,415,059	\$3,699,854	\$1,677,700	14:1

Note: The SOW Sum includes an allowance in the amount of \$890,000 for testing and abatement of hazardous materials that may be encountered on the project, including the abatement of lead and asbestos that may be encountered. NORESCO may use this allowance for abatement at its discretion during the construction period. Any hazardous materials testing or abatement required for the completion of the SOW in excess of this allowance shall be the sole responsibility of the City. NORESCO makes no representations or warranties with respect to the amount or character of hazardous materials that may be encountered in the SOW. NORESCO will provide the City with an accounting of this allowance prior to Final Acceptance of the project. Any funds remaining in the allowance may be allocated to additional work through execution of a change order or remitted to the City.

In addition, the SOW Sum includes a design allowance in the amount of \$50,000 for ECM 13 that may be used to add additional scope to that measure after execution of the Contract at the request of the City. Use of this allowance will be authorized by execution of a change order by both Parties. Any funds remaining in the allowance may also be allocated to additional work at the City's request through execution of a change order or remitted to the City at the end of the Interim Period.

C. Savings Opportunities Summary Page | 15

The anticipated O&M cost savings were determined based on our review of the City's outsourced repair costs and other material expenses for during the construction period, however, they are escalated 3.0% per year to account for the two year construction period and the expected equipment being replaced within this project. The following table summarizes the sources for these savings. These savings are not included increase in service costs during that time. These savings start in Year 1 of the performance period.

Table C-4: Review of City's Outsourced Repair Costs

<u>. m</u>	Energy Savings Measures	O&M Savings (\$)	Source
_	Interior Lighting Improvements & Controls	8 8 6 8	I nese yearly savings are a result of the reduction of material costs for replacement lamps over the contract term when converting from fluorescent to LED.
7	Exterior Lighting Improvements	\$9,113	These savings are a result of the reduction of material costs for replacement lamps and ballasts over the contract term when converting from fluorescent to LED.
m	Variable Speed Chillers & Pumps	\$21,794	The following expenses were provided by the City represent a typical year costs basis to estimate yearly savings associated with the Crosby chillers replacement:
		V. V	• On February 28, 2014, an expense of \$4,091 was paid to Trane for the replacement of mineral oil for both chillers at Crosby.
			• On February 28, 2014, an expense of \$1,966 was paid to Trane for the replacement of an oil pressure transducer on chiller #1 at Crosby.
			• On May 15, 2014, an expense of \$1,128 was paid to Trane for (9.5) hours of labor of troubleshooting the chillers at Crosby.
			• On May 21, 2014, an expense of \$2,252 was paid to Trane for (7) hours of labor on the chillers at Crosby.
			• On August 4, 2014, an expense of \$2,471 was paid to Industrial Pump & Valve for repair of a condenser water pump at Crosby.
· · · · · · · · · · · · · · · · · · ·			• On August 4, 2014, an expense of \$2,490 was paid to Industrial Pump & Valve for repair of a condenser water pump at Crosby.
water and the second			• During FY14, '15, and '16, the City paid an average of \$24,582 yearly for service agreements with Trane to maintain (8) chillers throughout the City. The Crosby chillers represent 25% of this contract, for a total 0 &M savings associated with the Trane service agreement of \$6,146.
4	Air Handling Unit	0\$	None.
	Damper		
	Refurbishments		

Source	These estimated savings are a result of the reduction of material costs for the repair and replacement of pneumatic thermostats, pneumatic actuators, steam valves, and chilled water valves, which will be replaced at Crosby, Wilby, West Side, and Kennedy schools as part of the EMS scope of work. Additional O&M savings from a reduction of the existing Service Agreements is included, as well as, other EMS time and material repair costs.	None	None	These estimated savings are a result of the reduction of material costs for the repair and replacement of pneumatic thermostats, pneumatic actuators, and steam valves, which will be replaced with new Thermostatic Radiator Valves at Barnard, Buck's Hill, Bunker Hill, Chase, Crosby, Driggs, Generali, Hopeville, Kennedy, Sprague, Tinker, Walsh, Wendell Cross, West Side, Wilby, Wilson, and Chase Building.	None	None	The following expenses were provided by the City, which account for the savings: On October 29, 2014, an expense of \$7,621 was paid to All State Boiler for boiler parts. On June 9, 2015, an expense of \$1,750 was paid to MJ Fahy for boiler work at Chase Building. On October 8, 2015, an expense of \$26,950 was paid to MJ Fahy for boiler repair work at Chase Building.	The following expenses were provided by the City, which account for the savings: • On February 10, 2015, an expense of \$18,900 was paid to CT Boiler Repair for repairs to boiler #3 at Crosby. • On March 31, 2015, an expense of \$1,458 was paid to CT Boiler Repair for repairs to boiler #1 at Crosby. • On October 31, 2015, an expense of \$9,650 was paid to Shoreline Boiler to repairs to boiler #1 at Crosby. • On December 1, 2015, an expense of \$3,230 was paid to Shoreline Boiler to repair (6) lower nipples on the boiler #2 at West Side. • On December 1, 2015, an expense of \$2,740 was paid to Shoreline Boiler to repair (8) lower nipples on the boiler #3 at West Side.

2. Detailed Description of Each Recommended ESM

Please see the following tabbed sections for detailed descriptions of the 14 energy savings measures recommended for this project. We also include the following information in the appendices:

- Appendix 1: Savings Calculations
- Appendix 2: 35% Drawings
- Appendix 3: Equipment Cutsheets
- Appendix 4: Audit Data

ESM 1:INTERIOR LIGHTING IMPROVEMENTS & CONTROLS

ESM 1: Interior Lighting Improvements & Controls

Benefits: This measure will reduce the amount of energy used to illuminate the interior of the buildings. In addition to energy savings, the interior lighting improvements will require less-frequent lamp replacement than the equipment they are replacing, and the high-efficiency lamp replacement costs are subsidized by the electric utility. Our lighting solution consists primarily of high-efficiency light-emitting diode (LED) linear lamps that have a rapid payback. NORESCO will also upgrade the City's lighting controls in some of the schools, through the addition of occupancy-based controls, which will reduce energy consumption by shutting off lighting during periods of inactivity. This ESM is a major savings driver that helps fund other needed infrastructure improvements in Waterbury's buildings. This lighting system is proven reliable and can be easily maintained by the City's in-house electrical department.

Summary: NORESCO will optimize the existing lighting systems by upgrading the existing T8 lighting with linear TLED lamps. NORESCO will achieve this by retrofitting existing 32-watt 4-ft and U-tube fluorescent luminaries with high-efficiency, 12.5- and 16.5-watt, TLED lamps compatible with existing electronic ballasts; retrofitting existing 2-ft and 3-ft fluorescent luminaries with high-efficiency, 8- and 10.5-watt, TLED lamps compatible with existing electronic ballasts; replacing

incandescent lighting with new high-efficiency LED lamps or luminaries; and replacing high intensity discharge (HID) luminaries with new high-efficiency LED luminaries. NORESCO will also install wireless ceiling-mounted sensors in selected classroom and corner-mounted sensors in selected hallways in nine Waterbury schools.

Implementation Cost: \$2,099,731

Energy Cost Savings: \$344,408

Annual Energy Reduction: 3,723 kW · 5,769 kVA · 1,632,263 kWh · (17,522) CCF

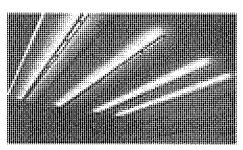

M&V Protocol: Option A

INTERIOR LIGHTING IMPROVEMENTS

Detailed Description

Existing Description

The existing interior lighting systems at the Waterbury schools and City buildings are lit primarily by linear 4-ft 32-watt standard efficiency "800 series" T8 fluorescent lamps with electronic instant start ballasts. Throughout the hallways, restrooms and offices there are also luminaries that use 2-ft, 3-ft, and U-tube T8 fluorescent lamps with electronic instant start ballasts. The primary lighting system in most of the school gymnasiums is comprised of newly

Direct/indirect lighting at the Reed Elementary School will be retrofitted with linear TLED lamps to provide the 310° light output needed for this lighting design.

installed 4- and 6-lamp T5HO high-bay luminaries, while a few remaining schools have gymnasium lighting consist of 3- and 4-lamp T8 luminaries. The lighting in the gymnasium at Gilmartin consists of high wattage compact fluorescent high-bay luminaries. Lighting in most all of the school gymnasiums is controlled by luminaire-mounted occupancy sensors. There are, however, eight schools that currently have manual lighting controls for the gymnasium lighting: Bunker Hill, Carrington, Duggan, Gilmartin, Hopeville, Maloney, Reed, Walsh, and Wilson. Most classrooms, offices, and many hallways are equipped with occupancy sensors at the schools and in offices within the City buildings. However, many classrooms, offices, hallways, and cafeterias use manual controls, and these locations could benefit from occupancy sensors. More detail about the existing use of and NORESCO's recommendation for occupancy sensors within each facility can be found in the Lighting Controls section below.

Incandescent luminaries were observed in several of the schools and City office buildings. Within classrooms, offices, libraries, and hallways these luminaries included recessed down-light luminaries, vanity and flood luminaires. In restrooms, mechanical/electrical and janitorial closets, there are surface mounted drums. Table 1 lists the existing lighting systems at each Waterbury facility.

Table 1: Summary of Existing Interior Lighting Systems at Each Facility

Recommended Improvements

NORESCO has taken a comprehensive approach to improving the lighting system performance and energy efficiency at each school and City office building. This ESM identified by NORESCO will maximize the overall electric savings and maintain the design intent of the existing equipment.

Interior Lighting

Maintenance on aging lighting systems compounded by new regulations for the proper recycling/disposal of fluorescent and HID lamps and ballasts is a problem for almost every facility. Federal regulations have compelled manufacturers to develop new products with higher lumens per watt and lower mercury content. These advancements in lighting technologies provide new opportunities for achieving significant cost saving advantages over the existing T8 systems and an even greater savings on T12 systems.

NORESCO will use a combination of relamping, retrofitting, and/or replacing of existing luminaries with a combination of energy-efficient TLED lamps, LED retrofit kits, and new LED luminaries.

Existing fluorescent luminaries with 2-ft, 3-ft, 4-ft, and Utube T8 lamps will be relamped with low wattage energy saving 8-, 10.5-, 12.5, and 16.5-watt TLED lamps and the existing electronic ballasts will be reused. The existing

TLED lamps will be installed in luminaires throughout the City of Waterbury's facilities.

electronic ballasts will be able to power the TLED lamps throughout each site. NORESCO verified this by inspecting the ballasts in numerous luminaries in each school and office building, along with interviewing Tony Cicchiello, City Electrical Foreman, and Angelo, City Electrician, during our IGEA process. For further testing of the TLED lamps on existing ballast, NORESCO provided several cases of TLED lamps to the electrical department, who installed the lamps in various luminaries throughout many of the schools and City buildings to observe how the lamps performed. At last report, TLED lamps are functioning as designed on existing ballasts.

There are also T8 fluorescent luminaries in various locations throughout the schools and City buildings that utilize battery ballasts for emergency egress lighting. We installed TLED lamps in some of these fixtures to see if the existing battery ballast would power up the lamps in the event power was lost, and we established that the lamp/ballast combination worked properly. NORESCO was not able to test/sample all luminaires that utilized battery ballasts; therefore, NORESCO will provide an additional eighty (80) fluorescent battery ballasts as shelf stock with the understanding that if any existing battery ballasts fail to power up the new TLED lamp(s), ballasts from this shelf stock will be used to replace them; the City's in-house electrical department will replace the battery ballast with a new one.

Some buildings contain linear fluorescent fixtures with battery back-up ballasts. Depending on the age, manufacturer and condition of the existing ballasts, some may not be operational now, or may not operate properly with the new TLED lamps. An allowance to replace up to twenty (20) battery backup ballasts has been included in the project scope to address these existing conditions.

Existing fluorescent luminaires containing linear T12 lamps and magnetic ballast will be retrofit by removing existing lamps and ballasts, from the luminaire, and new electronic ballasts and TLED lamps will be installed. Areas such as gymnasiums, hallways, cafeterias, and libraries at some of the schools that use newly installed T5 lamps and electronic ballasts are not recommended to be retrofit.

There are a mix of incandescent, compact fluorescent, and HID recessed down-lights throughout hallways, offices, classrooms, and libraries in some of the facilities. All down-light luminaries containing HID lamps will be retrofit with LED recessed down-lights kits. The existing HID lamp, reflector, retention clips and yoke will be removed, and new LED driver and retrofit housing will be installed, secured, and wired to the existing J-box and trim.

Incandescent luminaries will be relamped with low wattage LED screw-in lamps, and new LED drum fixtures will replace existing incandescent drums. All luminaries will be of similar style to the existing to maintain the building architectural details. Existing CFL luminaries that already contain low wattage lamps are not recommended to be retrofit.

Scope of Work

Table 2 summarizes the retrofits to the interior lighting systems for the City of Waterbury.

Table 2: Interior Retrofit Types and Quantities

Lighting Improvements	Total Fixture Counts	New Fixture Counts	Lamp Counts
New 2' Wrap Fixture with 2' 8.5w LED T8 Linear Lamps and Elec. Normal-Power High Efficiency Ballast	35	35	70

City's Responsibilities

City shall be responsible for the removal or relocation of stored items in occupied spaces and mechanical rooms that interfere with work and Customer shall relocate furniture, file cabinets, or other obstructions in order to facilitate safe, unimpeded access to areas and equipment or staging areas. Customer shall clean mechanical room floors prior to start of work to assure they are free of oil, grease or other chemicals. otherwise interfere with the ESM implementation and installation process.

Hazardous Materials Abatement Allowance

warranties with respect to the amount or character of hazardous materials that may be encountered in the SOW. NORESCO will provide the City with an accounting of this allowance prior to Final Acceptance of the project. Any funds remaining in the allowance may be allocated to The scope of work (SOW) includes a project allowance in the amount of \$890,000 for testing and abatement of hazardous materials that allowance for abatement at its discretion during the construction period. Any hazardous materials testing or abatement required for the completion of the SOW in excess of this allowance shall be the sole responsibility of the City. NORESCO makes no representations or may be encountered, including the abatement of lead and asbestos that may be encountered with this ESM. NORESCO may use this additional work through execution of a change order or remitted to the City.

Interface with Existing Systems & Operations

The majority of work performed under this ESM will be completed after normal business hours. The impact on building occupants should be nominal. NORESCO will coordinate all work with facility personnel to minimize the impact on the all occupants.

Maintenance Procedures

The project maintenance costs will be lowered by reducing the quantities of lamps and luminaires to be maintained over the term of the contract.

Special Operating Requirements

Beyond the normal end-of-life replacements, there are no special operating requirements associated with the lighting improvement measures.

Equipment Information

Manufacturer & Type

NORESCO is vendor neutral, and we will work with any lighting manufacturers to ensure competition and best option and value for the City of Waterbury. Installed equipment will be on the Design Lights Consortium-qualified products list to expedite incentive application reviews and approvals by Eversource. The new lighting equipment will be manufactured by one or more of the companies listed below, or by a suitable alternative.

Savings Calculations

A room-by-room lighting audit with the wattages and quantities of luminaries in each building is provided in *Appendix 1: Savings Calculations*. The existing luminaire types and quantities in the room-by-room lighting audit are based on observations made during the walkthroughs of each facility. During

our site visits data loggers were installed and the data from them used to help confirm the occupancy patterns and the amount of time lights are left on with the space empty. During the IGEA, NORESCO installed additional data loggers within many of the schools to log hours that lights were left on and when the rooms are occupied/unoccupied. We used the data logger analysis along with published hours of operation to help define run hours for room types throughout the facilities.

To calculate the direct lighting savings, luminaries have been grouped with other luminaries sharing the same baseline Lamp, Ballast, Combination (LBC) group, post-installation LBC group, and hours of operation. For each group of LBC, energy savings during each time of use period are calculated as follows:

• $ES_{lighting} = (P_{base} \times N_{base} - P_{post} \times N_{post}) \times H_{base}$

Where:

ES_{lighting} = energy savings (kWh) for the lighting retrofits

P_{base} = electrical power (kW) per luminaire for appropriate baseline LBC group

P_{post} = electrical power (kW) per luminaire for appropriate post-installation LBC group

H_{base} = existing annual operating hours defined by luminaire's pre hours group

N_{base} = number of luminaries in representative baseline LBC group

N_{post} = number of luminaries in representative post-installation LBC group

Cost savings are determined by multiplying the energy and demand savings for each applicable LBC by the approved incremental energy costs. The results of these calculations are summed for total electric demand (kW) and energy (kWh) savings.

NORESCO determines the contribution to HVAC peak demand savings by applying a diversity factor to the gross connected lighting load (kW). The lamp ballast combination's (LBC's) hours group determines the demand diversity factor already applied to the demand savings for direct lighting. For each group of luminaires in conditioned spaces, NORESCO calculated the HVAC monthly demand savings as follows:

DScooling =
$$\frac{(DS_{lighting} + DS_{controls}) \times C_{energy} \times HC}{C_{capacity} \times EFF}$$

Where:

DS_{cooling} = energy savings (kWh) for the HVAC interaction

DS_{lighting} = energy savings (kWh) for the lighting retrofits (from conditioned spaces only)

DS_{controls} = energy savings (kWh) for the on/off controls (from conditioned spaces only)

 C_{energy} = conversion factor = 3,413 Btu/kWh

HC = heat contribution of luminaires to conditioned spaces, stipulated at 75 percent

C_{capacity} = conversion factor = 12,000 Btu/ton-hr, cooling capacity

EFF = mechanical cooling efficiency, in kW/ton

The results of these calculations are summed for total electric demand (kW) and energy (kWh) savings. Interactive heating effects are calculated using the following equation:

• HP =
$$\frac{(ES_{lighting} + ES_{controls}) \times C_{energy} \times HC}{C_{MMBtu} \times EFF \times SEA_{heating}}$$

Information on this page is proprietary and subject to confidentiality restrictions

City of Waterbury, Connecticut

ESM 1: Interior Lighting Improvements & Controls

Investment Grade Energy Audit · May 13, 2016 (rev. June 29, 2016)

Where:

HP_{cooling} = heating penalty, in MMBtu, for the HVAC interaction

ES_{lighting} = energy savings (kWh) for the lighting retrofits (in conditioned spaces only) ES_{controls} = energy savings kWh) for the on/off controls (in conditioned spaces only)

 C_{energy} = conversion factor = 3,413 Btu/kWh

HC = heat contribution of luminaires to conditioned space, stipulated at 75 percent

C_{MMBtu} = conversion factor = 1,000,000 MMBtu/Btu

EFF = mechanical heating efficiency, as a percentage

SEA_{heating} = heating season, in percent of year

To determine cost savings, we multiplied the energy and demand savings of all luminaire groups (minus the heating penalty) by the approved incremental energy costs.

Design Considerations

After an analysis of the existing lighting systems and in consideration of the Illuminating Engineering Society of North America (IESNA) guidelines presented in *The Lighting Handbook, 10th Edition,* NORESCO has identified a scope of work that will generate significant energy savings and reduce maintenance costs while providing appropriate light levels. NORESCO will follow the illuminance targets recommended by IESNA as the standards of comfort for The City of Waterbury facilities. Table 4 shows a sample of those recommended targets.

LIGHTING CONTROLS

Detailed Description

Existing Description

Our IGEA revealed that many of the City's schools and office buildings have existing lighting occupancy controls in classrooms, offices, hallways, and gymnasiums. However, the lighting in some of these areas within the schools operates with manual switches and not occupancy sensors. During the IGEA process, we spoke with some teachers whose classrooms have manual controls -- we were told that some of the classrooms once had occupancy sensors but that the sensor stopped working at some point and a manual switch was installed. Classrooms, hallways, and offices that do not have lighting controls are excellent candidates for the installation of additional lighting controls.

Recommended Improvements

NORESCO will install occupancy sensors in classrooms and corridors at Sprague, Bucks Hill, Regan, Kingsbury, Driggs, Wilson, Chase, Walsh and Bunker Hill schools. These schools currently have occupancy sensors in most of the classrooms and corridors, but, during the IGEA, we found some areas that do not. We will install wireless ceiling-mounted occupancy sensors in selected classroom and corner-mounted occupancy sensors in selected hallways. Lighting controls save energy based on activity in the lighted space, so we will install occupancy sensors in select areas to automatically shut off lights where occupancy is infrequent yet lights are typically left on.

Scope of Work

Table 5 shows the quantities of lighting controls that NORESCO will install in the selected schools. A comprehensive room-by-room detailed scope of work is included in *Appendix 1: Savings Calculations*.

Table 5: Quantity of Lighting Controls to Be Installed

	Total	134

Interface with Existing Systems & Operations

The majority of work performed under this ESM will be completed after normal business hours. The impact on building occupants should be nominal. NORESCO will coordinate all work with facility personnel to minimize the impact on the all occupants.

Equipment Information

Manufacture & Type

NORESCO will install lighting control equipment manufactured by one of the following manufacturers or will use equipment of similar quality.

- Lutron, 7200 Suter Road, Coopersburg, PA 18036, 888-588-7661
- Sensor Switch, 1170 Peachtree Street, NE Suite 2300, Atlanta, GA 30309, 800-922-9641

Savings Calculations

To calculate the lighting control savings, luminaires have been grouped with other luminaires sharing the same baseline LBC group, post-installation LBC group, and hours of operation. NORESCO will verify energy savings based on the actual installed quantities. For each group of luminaires, we will calculate the energy savings during each time of use period as follows:

• $ES_{controls} = \{(P_{post} \times H_{base}) - (P_{post} \times H_{post})\} \times N_{post}$

Where:

ES_{controls} = Energy savings (kWh) for the on/off controls

P_{post} = Electrical power (kW) per luminaire for appropriate post-installation LBC group

H_{base} = Baseline annual operating hours defined by luminaire's pre-hours group

H_{post} = Post-Installation annual operating hours defined by luminaire's post hours group

N_{post} = Number of fixtures in representative post-installation LBC group

For each group of fixtures in this ESM, we calculated the monthly demand savings for the lighting controls as follows:

• $DS_{controls} = P_{post} \times DF_{controls} \times N_{post}$

Where:

DS_{controls} = monthly demand savings (kW) for the lighting controls

P_{post} = electrical power (in kW) per luminaire for appropriate post LBC group

DF_{controls} = diversity factor; as a percentage

 N_{post} = number of fixtures in representative post-installation LBC group

The results of these calculations are summed for total electric demand (kW) and energy (kWh) savings. Cost savings are determined by multiplying the energy and demand savings for each applicable LBC by the approved incremental energy costs.

ESM 2:

EXTERIOR LIGHTING IMPROVEMENTS

ESM 2: Exterior Lighting Improvements

Benefits: This measure will reduce the amount of energy used to illuminate the exterior perimeter, walkways and parking lots at each facility. In addition to energy savings, the exterior lighting improvements will require less-frequent lamp replacement than the equipment they are replacing, and the high-efficiency lamp replacement costs are subsidized by the electric utility. Our lighting solution consists of high-efficiency light-emitting diode (LED) lamps and luminaries that have a rapid payback. This ESM is a major savings driver that helps fund other needed infrastructure improvements in Waterbury's buildings. This lighting system is proven reliable and can be easily maintained by the City's in-house electric department.

Summary: NORESCO will optimize the exterior lighting systems by upgrading existing High Intensity Discharge (HID) luminaries with new LED luminaries. NORESCO will achieve this by: replacing existing building-mounted and pole-mounted metal halide (MH) and High Pressure Sodium (HPS) luminaries with new high-efficiency LED luminaries. For exterior fluorescent luminaires in walkways and parking garages, NORESCO will upgrade them by retrofitting existing 32-watt 4-ft luminaries with high-efficiency, 12.5-watt, TLED lamps compatible with existing electronic ballasts.

Wall-mounted flood luminaire at Bucks Hill

Implementation Cost: \$986,752

Energy Cost Savings: \$127,455

Annual Energy Reduction: 421 kW · 881,676 kWh

M&V Protocol: Option A

Detailed Description

Existing Description

NORESCO will retrofit or replace existing exterior lighting luminaries with more energy efficient LED lighting options. Exterior lighting at the schools and City buildings consists mainly of one or a combination of the following lighting types:

- Recessed down-lights
- Surface-mounted drums
- Surface-mounted four-foot vapor tight luminaires with 32-watt T8 lamps

Elementary School will be replaced with new LED wall-mounted flood luminaire that have Surface-mounted wall packs and sconces a rated life of over 100,000 hours, which will require many fewer lamp change outs by the Building-mounted flood lights facilities department. Pole-mounted parking lot/area lighting

The exterior lighting consists of a combination of building mount and pole-mounted HID, fluorescent, and incandescent luminaires. The HID luminaires have either metal halide (MH) or high-pressure sodium (HPS) lamps and ballasts.

Most all schools have a variety of building-mounted HID wall packs and flood lights. The lamp wattages vary for these luminaires and range from 70- to 400-watts and upwards of 1,000-watt flood lights at some schools. The parking lot and area pole lighting at the schools consist of cobra head, shoebox, and post top luminaires and range from 100- to 400-watts.

The perimeter building-mounted wall packs and flood lights at the City buildings is also HID, and the lamp wattages range from 50- to upwards of 1,000-watt flood lights at some buildings. The parking lot and area pole lighting at the City buildings and parking garages consist of cobra head and shoebox luminaires and range from 100- to 400-watts.

For the metal halide light source, the white light source offers some great advantages, but there are several significant drawbacks including shorter lamp life, long warm-up period, and color shifting.

For HPS, the light sources are very efficient, offering a high lumens/watt ratio; however, they have some major drawbacks as well, including poor color rendering, golden-yellowish appearance, and long warm-up period. Table 1 details the existing exterior lighting systems within the facilities included in the scope.

The predominant lighting type throughout the three parking garages -- at Police Headquarters, Buckingham, and Scovill -- is surface-mounted 4-ft vapor tight luminaires with two or three 32-watt T8 lamps. There is also a mix of incandescent and compact fluorescent luminaires at these facilities. These luminaries ranged from recessed down-light, surface-mounted and flood luminaires. The new luminaries installed will provide benefits of:

- Reduced energy consumption by 15% to 90%, depending on the luminaire application
- Increased longevity from a range of up to 20 years
- Reduced exterior light pollution, as LED optics direct lumen output with more efficient and precise control compared to the existing conventional HID reflector systems
- Established lighting uniformity by aiming the light toward distant points within the targeted task area, boosting minimum illumination levels
- Instant on/off capability, this enables increased lighting control usage
- Reduced maintenance through longer life lamps, ballasts, and drivers than the existing luminaries

ESM 2: Exterior Lighting Improvements Page | 6

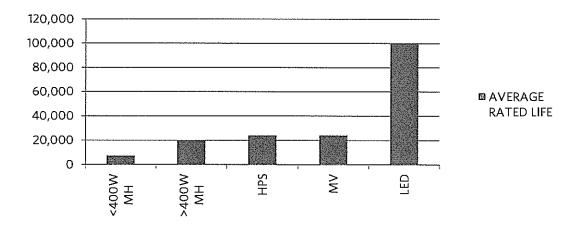

Recommended Improvements

NORESCO has taken a comprehensive approach to improving the lighting system performance and energy efficiency at each school and city office building. This ESM identified by NORESCO will maximize the overall electric savings, and maintain the design intent of the existing equipment.

Maintenance on aging lighting systems compounded by new regulations for the proper recycling/disposal of fluorescent and HID lamps and ballasts is a problem for almost every facility. Federal regulations have compelled manufacturers to develop new products with higher lumens per watt and lower mercury content. These advancements in lighting technologies provide new opportunities for achieving significant cost saving advantages over the existing HID systems.

NORESCO will replace the existing HID building-mounted wall packs, flood lights, and pole lighting at each facility with similar style luminaries that use LED technology. NORESCO will use solid state LED technology for maximum performance and energy savings. One of the largest advantages of LED technology over HID technology is the rated life of the source. Replacing the existing systems to a high-performance, LED system would result in over75% longer life compared to HID systems as shown in Figure 1.

Figure 1: Rated Life Expectancy Comparison of LED to HID Sources

LED lights are also "green" in that they use no hazardous materials. Mercury is a byproduct of a significant number of HID lighting system components and disposal of those lamps and ballasts has become a significant environmental problem. Additional benefits of LED luminaires include the following.

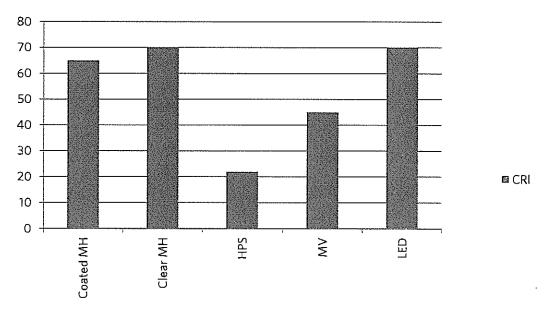

- Unlike conventional HID reflector systems, the optical system of an LED directs lumens to the target task only.
- Wasteful and neighbor-unfriendly backlight pollution is controlled through careful aiming and shielding. Costly, inconvenient, ineffective, and unsightly "house-side shield" accessories are unnecessary to provide backlight control.

- Uniformity of the lighting is significantly improved because the light is aimed toward distant points within the targeted task area, boosting minimum illumination levels. The maximum illumination levels are controlled because no LEDs are aimed straight down.
- Improved performance in cold applications.
- Instant on/off, ideal for lighting controls.
- Minimal maintenance: easy component replacement, if necessary.
- No hazardous or environmental concerns.

Another significant advantage of LED light sources is the improved color rendering, compared to other sources. The color rendering index (CRI) of a light source measures the ability of a light source to reproduce the colors of various objects faithfully in comparison with an ideal or natural light source. It is another key component in providing a safe and security environment. Color rendering describes how a light source makes the color of an object appear to human eyes and how well subtle variations in color shades are revealed. Figure 2 demonstrates the CRI values of LED compared with the other HID sources.

Figure 2: Color Rendering Index Comparison of LED to HID Sources

NORESCO will replace existing HID downlight, wall pack, and flood luminaires at each facility and install new like-kind LED luminaires. At Carrington School, we were told that the existing pole lights in the front courtyard poses a danger for many of the students, and they have requested we remove them. NORESCO has included in our scope for the removal of those luminaries. New building-mounted LED flood luminaires will be installed on the roof of the school in lieu of the pole lights. Existing parking lot and area pole luminaire heads will be replaced with like kind LED cobra, shoebox, and/or post top luminaires. Exiting poles will be reused.

Scope of Work

Table 2 summarizes the retrofits to the exterior lighting systems for the City of Waterbury.

City's Responsibilities

City shall be responsible for the removal or relocation of stored items in occupied spaces and mechanical rooms that interfere with work and Customer shall relocate furniture, file cabinets, or other obstructions in order to facilitate safe, unimpeded access to areas and equipment or staging areas. Customer shall clean mechanical room floors prior to start of work to assure they are free of oil, grease or other chemicals. otherwise interfere with the ESM implementation and installation process.

Hazardous Materials Abatement Allowance

The scope of work (SOW) includes a project allowance in the amount of \$890,000 for testing and abatement of hazardous materials that allowance for abatement at its discretion during the construction period. Any hazardous materials testing or abatement required for the may be encountered, including the abatement of lead and asbestos that may be encountered with this ESM. NORESCO may use this

warranties with respect to the amount or character of hazardous materials that may be encountered in the SOW, NORESCO will provide the City with an accounting of this allowance prior to Final Acceptance of the project. Any funds remaining in the allowance may be allocated to completion of the SOW in excess of this allowance shall be the sole responsibility of the City. NORESCO makes no representations or additional work through execution of a change order or remitted to the City.

Interface with Existing Systems & Operations

The majority of work performed under this ESM will be completed after normal business hours. The impact on building occupants should be nominal. NORESCO will coordinate all work with facility personnel to minimize the impact on the all occupants.

Maintenance Procedures

The project maintenance costs will be lowered by reducing the quantities of luminaires to be maintained over the term of the contract.

Special Operating Requirements

Beyond the normal end-of-life replacements, there are no special operating requirements associated with the lighting improvement measures.

Equipment Information

Manufacturer & Type

NORESCO is vendor neutral, and we will work with any lighting manufacturers to ensure competition and best option and value for the City of Waterbury. Installed equipment will be on the Design Lights Consortium-qualified products list to expedite incentive application reviews and approvals by Eversource. The new lighting equipment will be manufactured by one or more of the companies listed below, or by a suitable alternative.

Savings Calculations

During the IGEA, a luminaire-by-luminaire audit was performed for the exterior lighting with the wattages and quantities of luminaries at each facility, which is provided following in the Appendix 1:

Savings Calculations. The existing luminaire types and quantities in the lighting audit are based on observations made during the walkthroughs of each facility.

To calculate the direct lighting savings, luminaries have been grouped with other luminaries sharing the same baseline Lamp, Ballast, Combination (LBC) group, post-installation LBC group, and hours of operation. For each group of LBC, energy savings during each time of use period are calculated as follows:

• $ES_{lighting} = (P_{base} \times N_{base} - P_{post} \times N_{post}) \times H_{base}$

Where:

ES_{lighting} = energy savings, in kWh, for the lighting retrofits

P_{base} = electrical power, in kW, per luminaire for appropriate baseline LBC group

P_{post} = electrical power, in kW, per luminaire for appropriate post-installation LBC group

 H_{base} = existing annual operating hours defined by luminaire's pre hours group

N_{base} = number of fixtures in representative baseline LBC group

N_{post} = number of fixtures in representative post-installation LBC group

Cost savings are determined by multiplying the energy and demand savings for each applicable LBC by the approved incremental energy costs. The results of these calculations are summed for total electric demand (kW) and energy (kWh) savings.

Table 4: Hours of Operation for Schools and City Buildings

Hours Group	Hours Des	cription Annual Hours	Hou	rs Group Hours Description	Annual Hours
COB - GAR	Garage	8,760	Χ	Exterior	4,380

Design Considerations

After an analysis of the existing lighting systems and in consideration of the IESNA guidelines presented in *The Lighting Handbook, 10th Edition*, NORESCO has identified a scope of work that will generate significant energy savings and reduce maintenance costs while providing appropriate light levels. NORESCO will follow the illuminance targets recommended by IESNA as the standards of comfort for The City of Waterbury facilities. Table 5 shows a sample of those recommended targets.

Table 5: IESNA-Recommended Maintained Illuminance Targets (Excerpt)

ESM 2: Exterior Lighting Improvements

ESM 3:

VARIABLE SPEED CHILLERS & PUMPS

ESM 3: Variable Speed Chillers & Pumps

Benefits: This measure will replace the two aging chillers that use ozone-depleting refrigerant R-22, which is no longer manufactured, and will replace the chilled water and condenser water pumps, which are oversized. The new equipment will reduce the Crosby-Wallace Complex's electrical consumption and utility costs while improving performance, reliability, and comfort. The City of Waterbury will also benefit from reduced labor requirements, lower preventative maintenance and service costs, and reduced future equipment repair or replacement costs.

Buildings: Crosby-Wallace Complex

Summary: NORESCO will replace the two (2) existing water-cooled chillers with two (2) new 250-ton high efficiency units. The new integrated variable speed, water cooled, screw chillers will make use of the environmentally friendly refrigerant R-134A to reliably and efficiently cool the high school and middle school buildings. The existing chilled and condenser water pumps will be replaced with properly sized equipment, including premium efficiency motors, and the piping will be modified to optimize operational efficiencies. The new equipment will include new direct digital controls (DDC) that will be integrated to the newly upgraded energy management system (EMS).

Implementation Cost: \$1,205,930

Energy Cost Savings: \$43,149

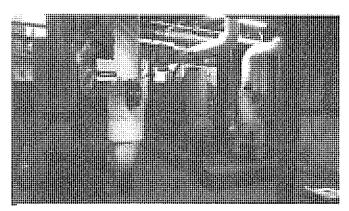

Annual Energy Reduction: 404 kVA · 116,829 kWh

M&V Protocol: Option A

Detailed Description

Existing Description

The existing chilled water system serves over twenty (20) air handling units that provide the cooling for the almost-400,000 square foot Crosby-Wallace Complex. There are also small areas of the buildings in the Complex that are air-conditioned by less efficient, stand-alone, air-cooled equipment.

Existing chillers to be replaced at Crosby-Wallace complex.

The existing chilled water system is

comprised of equipment of varying vintages, with chillers and pumps that are mis-matched in capacities. The original chilled and condenser water pumps are approximately twice the capacity they need to be, and the chillers lack variable frequency drives, contributing to equipment and operational

efficiencies that waste energy. NORESCO has confirmed with the chiller manufacturer that the existing equipment cannot be retrofitted with variable frequency drives (VFDs). The life expectancy of a water-cooled screw chiller is about 20 years. The current chillers were installed in 1999, have operated through 17 cooling seasons already, and are approaching the end of their life expectancies.

The existing screw chillers are Carrier models 23XL2O21EC60, each with a cooling capacity of 250 tons. Their rated full-load efficiency when new was 0.606 kW/ton, under standard chilled water and condenser water conditions. This capacity has degraded over the last 17 years, causing building cooling demand issues during the hottest summer days. The older chillers at the Complex also make use of the ozone-depleting refrigerant R-22, which is no longer manufactured and is strictly regulated. Not only does this pose an environmental concern, but it substantially increases the cost of service, repairs, and recharging because R-22 availability is becoming more and more limited.

Recommended Improvements

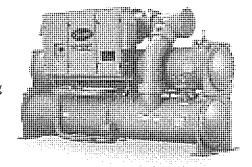

NORESCO will replace both aging water-cooled chillers with two new 250-ton variable speed chillers. The new units will operate with an efficiency of 0.404 kW/ton based on Integrated Part Load Value (IPLV). As the new chillers part-load efficiency is much higher than the existing chillers and as the chillers spend almost all of their time operating at less than full-load, substantial energy and utility cost savings will be achieved.

The new chillers will also make use of the more environmentally friendly and readily available refrigerant R-134A. The two existing chilled water pumps and two existing condenser (cooling tower) pumps will be replaced with new, properly sized units complete with premium efficiency motors. The existing chilled water and condenser water piping will be modified so the pumps can be operated independently for increased operational efficiencies. The existing VFD-equipped cooling towers will be reused, and all new equipment will have new DDC controls, including BACnet integration of the chiller manufacturer's local controls to the Complex's newly upgraded and expanded EMS.

Scope of Work

This chiller replacement at the Crosby-Wallace Complex will include the following.

- Removal of two (2) existing, 250-ton water-cooled chillers, including:
 - Reclamation of refrigerant from the existing chillers
 - Recycling and disposal of the chillers
- Removal of two (2) existing chilled water pumps, including:
 - Modifications of the chilled water supply and return piping
 - Recycling and disposal of the pumps

Carrier AquaEdge 23XRV Water-Cooled Variable-Speed Screw Chiller

- Removal of two (2) existing condenser water pumps, including:
 - Modifications of the condenser water supply and return piping
 - · Recycling and disposal of the pumps
- Installation of two (2) new 250-ton high-efficiency, variable-speed, water-cooled chillers, including:
 - Electrical connections
 - Chilled water piping connections
 - Condenser water piping connections
 - Control system connections and EMS integration
- Installation of two (2) new chilled water pumps, including:
 - Electrical connections
 - Chilled water piping connections and modifications
 - Pipe insulation
 - Control system connections and EMS integration
- Installation of two (2) new condenser (cooling tower) water pumps, including:
 - Electrical connections
 - Condenser water piping connections and modifications
 - Pipe insulation
 - Control system connections and EMS integration

Construction will be scheduled to minimize any required chilled water system outages. NORESCO will work closely with the Complex to schedule outages at times when they will not impact normal school operations.

City's Responsibilities

City shall be responsible for the removal or relocation of stored items in occupied spaces and mechanical rooms that interfere with work and staging areas. Customer shall clean mechanical room floors prior to start of work to assure they are free of oil, grease or other chemicals. Customer shall relocate furniture, file cabinets, or other obstructions in order to facilitate safe, unimpeded access to areas and equipment or otherwise interfere with the ESM implementation and installation process.

Hazardous Materials Abatement Allowance

The scope of work (SOW) includes a project allowance in the amount of \$890,000 for testing and abatement of hazardous materials that may be encountered, including the abatement of lead and asbestos that may be encountered with this ESM. NORESCO may use this allowance for abatement at its discretion during the construction period. Any hazardous materials testing or abatement required for the completion of the SOW in excess of this allowance shall be the sole responsibility of the City. NORESCO makes no representations or warranties with respect to the amount or character of hazardous materials that may be encountered in the SOW. NORESCO will provide the City with an

accounting of this allowance prior to Final Acceptance of the project. Any funds remaining in the allowance may be allocated to additional work through execution of a change order or remitted to the City.

Interface with Existing Systems & Operations

Maintenance Procedures

The new chillers and pumps will be more reliable and require far less maintenance and repair than the aging units they are replacing. In addition to the age difference, the new chillers being proposed have a variety of features designed to improve operation, reliability and reduce maintenance. These include the following.

- No shaft seals
- No guide vanes or slide vanes
- No chlorine in the refrigerant
- No refrigerant pumps
- No pressurization systems
- No bearing capacitors to change
- No pumps, hoses, or clamps for the VFD
- No glycol cooling required for the VFD
- Compressor acoustical enclosure for sound reduction

Special Operating Requirements

Each new chiller will be equipped with web-based DDC system integrated with the Complex's upgraded energy management system. This will provide much better control and building comfort while also allowing remote monitoring, trouble-shooting, and adjustment.

Equipment Information

Manufacturer & Type

The two new chillers will be Carrier model 23XRV4041NRVAA50 or approved equal. Since the invention of modern air-conditioning in 1902, Carrier has had a long history of innovation and industry leading cooling equipment. This particular model won ASHRAE's Green Building Innovation Award when it was introduced at the Air-Conditioning, Heating, Refrigerating (AHR) Expo, and it has been efficiently cooling buildings ever since, with ongoing enhancements and increasing capacity options. The pumps will be Bell & Gossett, or approved equal.

Savings Calculations

The calculations for the savings from this chiller replacement ESM were based on calculations of building loads and cooling system usage at various outside air temperatures over the course of the cooling season. A simple approximation of the formulae used for this calculation is shown below.

 Cooling Savings (for each hour of the year) = Hours × Cooling Load × (1/Proposed Cooling Efficiency – 1/Existing Cooling Efficiency)

Where:

Cooling Savings = Energy Savings (kWh) for Cooling Improvements

Hours = Hours of Cooling Season Operation

Cooling Load = Building Cooling Demand for Cooling Season Hours

Existing Cooling Efficiency = Manufacturer-Rated Efficiency for Corresponding Load

Proposed Cooling Efficiency = Manufacturer-Rated Efficiency for Corresponding Load

ESM 4:

AIR HANDLER UNIT DAMPER REFURBISHMENT

ESM 4: Air Handling Unit Damper Refurbishments

Benefits: This measure will replace inoperable air handler dampers and refurbish the remaining dampers, reducing the ongoing maintenance burden on the HVAC shop and improving temperature control and air quality of the schools while reducing energy and maintenance costs.

Buildings: Crosby-Wallace Complex Kennedy High School

West Side Middle School Wilby-North End Complex

Summary: NORESCO will refurbish or replace the dampers for seventy-six (76) air handling units in the buildings listed above. The scope of work will include installing thirty-four (34) new outdoor/return/exhaust air dampers and refurbishing/rebuilding one hundred and forty-six (146) existing-to-remain outdoor/return/exhaust air dampers.

Implementation Cost: \$321,887

Energy Cost Savings: \$29,038

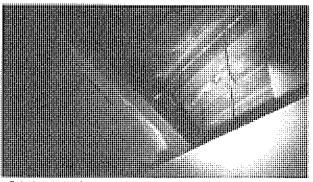

Annual Energy Reduction: 597 kVA, 153,414 kWh

M&V Protocol: Option A

Detailed Description

Existing Description

The existing air handling units (AHUs) in the buildings come in a variety of types and configurations, predominantly consisting of constant volume (single and multi-zone units) and variable volume systems, each providing heating, ventilation, and air conditioning (HVAC) to the occupied spaces.

Existing AHU damper with disconnected linkage and rusted and corroded blades that are permanently closed.

Based on our observations, Waterbury has

recently repaired some AHU components in these buildings including, but not limited to, new fan motor bearings at Crosby, vibration isolators at Crosby, new coils at Kennedy, and new condensate drain pans throughout the buildings.

Despite the repairs observed and the generally fair to good condition of most of the AHUs, there are still some key components of the existing systems that warrant some additional servicing, repairs, and replacement parts.

Recommended Improvements

Based on the existing condition of the equipment and the cost to restore the systems and improve their operational efficiency, NORESCO does not feel the capital expense of a complete AHU replacement is warranted at this time. However, the refurbishment or replacement of the AHU dampers in these buildings will provide more reliable and consistent comfort levels, improve indoor air quality, improve system performance under varying conditions and reduce current and future maintenance and service costs.

NORESCO will perform a thorough refurbishment of the key components and install new replacement parts on the existing AHU dampers to bring the units back to their original ventilation and air mixing capabilities. Extending the useful life of the equipment will avoid the need for a considerable capital investment in the dampers and will allow Waterbury the flexibility in prioritizing where to use scarce maintenance and capital funds elsewhere. The scope of this ESM was developed in close conjunction with the school department's facilities and HVAC shop. The HVAC shop foreman, Jason Porrini, and others felt that the AHUs were in good serviceable condition and a complete replacement was not necessary. The HVAC staff has done a good job keeping up with critical AHU component replacements, which NORESCO confirmed during the audit.

Damper replacement was identified as a critical need, and has been included in the scope for this ESM. Installation of new AHU dampers are included in this ESM, while the new electronic damper actuators, AHU steam and chilled water valve assemblies (valves and electronic actuators), and associated controls will be installed as part of ESM 5: Energy Management System Upgrades & Expansion, allowing NORESCO to replace maintenance-intensive pneumatic controls and seamlessly integrate monitoring and control of the newly refurbished equipment with the newly upgraded and expanded direct digital control (DDC) energy management system (EMS).

Scope of Work

The scope of work will include:

- See the table below for the damper schedule included in the scope of work. New damper actuators with electronic actuation and associated controls are included in ESM 5: Energy Management System Upgrades & Expansion.
- Damper refurbishment includes:
 - Clean dirt and debris from damper blades.
 - Install new silicone damper seals on blades.
 - Each damper shall be adjusted for free movement and the damper blade bearings lubricated.
 - Each damper linkage shall be adjusted for free movement and all adjustments nuts tightened and secured. Subcontractor shall lubricate damper blade bearings and each linkage pivot point.
 - Subcontractor shall test and adjust each actuator for full stroking without any binding prior to being put back in service.

Damper replacement includes:

- Remove existing outside air, return air, and exhaust air dampers.
- Furnish and install new low leakage outside air, return air, and exhaust air dampers. The new dampers will be sized to match the existing equipment.
- Control dampers shall be Greenheck model VCD-33, ultra-low leakage airfoil dampers or approved equal. Leakage rating at four (4) inches of water column (in. w.g.), pressure differential across damper shall be six (6) cubic feet per minute by feet squared (cfm/ft²). Modulating dampers shall have linear flow output characteristics.
- Outdoor and return air mixing dampers shall be parallel-blade and shall direct airstreams toward each other.
- Other modulating dampers shall be opposed-blade.
- Frame shall be galvanized steel, minimum 3/32-inch thick, channel shaped for adequate strength.
- Damper construction shall be sixteen (16) gauge galvanized steel, or 304 stainless steel depending on the application as specified in the scope of work. Blade seals shall be silicone.
- Damper blades shall be airfoil type not exceeding an 8-inch width or 48-inch length and shall be suitable for medium velocity performance.
- After installation of low-leakage dampers with seals, caulk between frame and duct or opening to prevent leakage around perimeter of damper.
- Each damper linkage shall be adjusted for free movement and adjustments nuts tightened and secured. Subcontractor shall lubricate damper blade bearings and each linkage pivot point.
- Test and adjust each actuator for full stroking without any binding prior to it being put back in service.

City's Responsibilities

City shall be responsible for the removal or relocation of stored items in occupied spaces and mechanical rooms that interfere with work and staging areas. Customer shall clean mechanical room floors prior to start of work to assure they are free of oil, grease or other chemicals. Customer shall relocate furniture, file cabinets, or other obstructions in order to facilitate safe, unimpeded access to areas and equipment or otherwise interfere with the ESM implementation and installation process.

Hazardous Materials Abatement Allowance

The scope of work (SOW) includes a project allowance in the amount of \$890,000 for testing and abatement of hazardous materials that may be encountered, including the abatement of lead and asbestos that may be encountered with this ESM. NORESCO may use this allowance for abatement at its discretion during the construction period. Any hazardous materials testing or abatement required for the completion of the SOW in excess of this allowance shall be the sole responsibility of the City. NORESCO makes no representations or warranties with respect to the amount or character of hazardous materials that may be encountered in the SOW. NORESCO will provide the City with an

accounting of this allowance prior to Final Acceptance of the project. Any funds remaining in the allowance may be allocated to additional work through execution of a change order or remitted to the City.

Interface with Existing Systems & Operations

Maintenance Procedures

The maintenance for the replaced and refurbished AHU dampers will be less than the existing equipment, as the existing equipment was past due for refurbishment and required repairs or replacements in addition to typical preventative maintenance. The HVAC shop currently spends considerable time servicing and maintaining the dampers. This ESM will allow them to get caught up on some of the past due deferred maintenance, and more time for proactive, regularly scheduled maintenance on this equipment going forward to ensure its continued efficient operation.

Special Operating Requirements

There are no special operating requirements for the new or refurbished dampers other than it will be operated by the new direct digital controls installed under ESM S: Energy Management System Upgrades & Expansion.

Equipment Information

Manufacturer & Type

The new AHU dampers will meet or exceed the original specifications. Equipment will be manufactured by Greenheck, or approved equals.

Savings Calculations

Pre-retrofit energy consumption is calculated using the systems' CFM, cooling loads, and operational parameters such as economizer hours of operation. Pre- and post-installation end use energy consumptions are calculated in a spread sheet model using the following formulae as its basis:

q = 1.08 · CFM · △T

Where:

q = AHU Heating/Cooling (Latent only) Load (Btu/hr)

1.08 = Conversion Constant (Btu/CFM*hr*°F)
CFM = AHU Air Flow (Cubic Feet per Minute)

 ΔT = Temperature Differential (°F)

q = 4.5 · CFM · △h

Where:

q = AHU Total Cooling Load (Btu/hr)

4.5 = Conversion Constant (#*min/CFM*hr)
CFM = AHU Air Flow (Cubic Feet per Minute)

 Δh = Enthalpy Differential (But/#)

ESM 5:

ENERGY MANAGEMENT SYSTEM UPGRADES & EXPANSION

ESM 5: Energy Management System Upgrades & Expansion

Benefits: This measure will improve building occupant comfort, reduce energy costs, reduce maintenance costs, and provide increased monitoring, control, and troubleshooting of building heating ventilating and air conditioning (HVAC) systems. The new systems will be open protocol systems with a web-accessible user interface to provide password-protected access to City and school personnel. These new automatic controls will provide temperature set point and occupancy schedules as well as other control strategies, saving electricity and fuel energy. Retro-commissioning (RCx) the existing-to-remain energy management system (EMS) will restore proper and efficient operation of controlled HVAC equipment and systems.

Buildings: Barnard Adult Education Bucks Hill School

Bunker Hill School Carrington School

Chase Building Chase School

Crosby-Wallace Complex Department of Public Health

Driggs School Generali School

Hopeville School Kennedy High School

Kingsbury School Regan School
Sprague School Tinker School

Walsh School Washington School

Waterbury Arts Magnet School Wendell Cross School

West Side School Wilby-North End Complex

Wilson School

Summary: NORESCO will install new, comprehensive web-accessible direct digital control (DDC) energy management systems and/or retro-commission (RCx) the existing-to-remain control systems in twenty-three (23) buildings. The Crosby-Wallace Complex, Wilby-North End Complex, Kennedy High School, and West Side Middle School will have old pneumatic control systems removed and will be converted to electronic DDC systems. The new electronic controls will automatically enable HVAC systems and modulate heating, cooling, and ventilation to maintain space temperature setpoints. Schedules will be set up in accordance with occupancy to reduce energy use during off hours. For retro-commissioning, we will evaluate the existing-to-remain HVAC controls systems at the appropriate facilities and identify and correct existing deficiencies with the controls and sequences of operation.

Implementation Cost: \$5,346,414

Energy Cost Savings: \$621,167

Annual Energy Reduction: 215,990 CCF · 2,603,237 kWh

M&V Protocol: Option B

Detailed Description

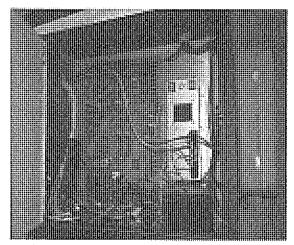

Existing Description

In the Chase Building, there is no existing DDC or EMS. The manual and pneumatic controls that are intended to provide control of the boiler and steam radiators are not sufficient to regulate the space temperatures properly. Numerous uneven temperature complaints were noted from the building occupants during our walkthroughs.

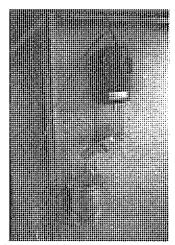

At Barnard, Bucks Hill, Bunker Hill, Carrington, Chase, Driggs, Generali, Hopeville, Kingsbury, Regan, Sprague, Tinker, Walsh, Washington, Wendell Cross, West Side, and Wilson schools and the Department of Public Health, there are some older proprietary direct digital control (DDC) from Honeywell, TAC, and pneumatic systems that control HVAC equipment in the buildings. These systems are not easily monitored and are increasingly difficult to maintain and upgrade.

At Waterbury Arts Magnet, the existing full DDC system is capable of turning off equipment during unoccupied hours, but these scheduled operations and other energy savings strategies could be better programmed and implemented.

The Crosby-Wallace Complex, Wilby-North End Complex, and Kennedy High School have existing legacy DDC systems overlaying obsolete and cost-intensive pneumatic controls that have no direct monitoring and limited control capability. Some critical components of these legacy systems are no longer supported by the manufacturers.

Legacy DDC panel at the Department of Health.

A disconnected pneumatic actuator at Crosby.

Recommended Improvements

NORESCO will install or RCx twenty-three (23) HVAC control systems totaling four thousand five hundred fifty-one (4,551) hardware points that will save Waterbury energy and provide significantly increased monitoring, control, and building comfort while reducing the maintenance burden on the HVAC shop. Building HVAC equipment, including air handling units, pumps, boilers, and chillers will be enabled by automatic controls programmed to turn on/off equipment and maintain space temperature set-points during both occupied and unoccupied periods. The old and obsolete pneumatic controls will be replaced with new DDC. An additional central workstation will be provided to monitor and control points via interactive graphic displays. The DDC is web-accessible to allow for EMS monitoring and

control via home laptops, smart phones and tablets. Data will be trended and reports generated to provide up-to-date data for analytics of building operations. This high level of increased DDC monitoring and control, along with comprehensive training of facilities staff will serve the City well and provide features that will markedly improve building operations, maintenance, troubleshooting, and inhouse customer service.

At Crosby-Wallace, Wilby-North End, and West Side, in addition to upgrading the legacy EMS and replacing the old pneumatic valves and damper actuators with new, modern DDC components; additional controls are proposed to optimize the volume of air delivered for the heating and cooling needs of the spaces served by the majority of the air handlers. Matching the volume of air provided to the space heating and cooling loads reduces energy and allows more precise temperature control of the space. The controls included to do this include seventy (70) new variable frequency drives (VFDs) on over one thousand, two hundred and ninety-five (1,295) total HP of air handler fan motors; three hundred and

New DDC will be installed in eleven of Waterbury's buildings. A central workstation will be provided to monitor mechanical equipment control points in a graphical format. An existing Crosby High School air handling unit graphic is shown here.

sixty-five (365) HP from forty-one (41) new premium-efficiency fan motors; static pressure and space temperature/CO₂ sensors. When the space temperature conditions are satisfied, the volume of air delivered by the air handler will be incrementally reduced while still maintaining the set-point. Under ESM 12: Hot Water Boilers & Pool Heating Systems, the new boilers, pumps, and other included equipment will be interfaced and integrated with the EMS. At Crosby-Wallace, under ESM 3: Variable Speed Chillers & Pumps, the new chillers, pumps, and other included equipment will be interfaced and integrated with the EMS.

At Kennedy, the old legacy DDC and pneumatic controls on the air handling units will be replaced with all new DDC and scheduling and other energy savings strategies will be programmed and implemented. Under ESM 12: Hot Water Boilers and Pool Heating Systems, the new boiler, pool heater, pumps, and other included equipment will be interfaced and integrated with the EMS. Individual radiators and convectors will have the old, inoperable pneumatic control valves removed, and thermostatic radiator valves (TRVs) installed under ESM 8: Steam Traps & Thermostatic Radiator Valves.

For Kennedy, Crosby-Wallace, and Wilby-North End, the existing building level network engine controllers (JACEs) will be upgraded to the most current revisions (8000) available, which will also allow the head end platform to be upgraded to the Niagara 4 configuration. These upgrades allow for fully supported hardware/software revisions and expansion in the future.

At the Department of Public Health and Barnard, Bucks Hill, Bunker Hill, Carrington, Chase, Driggs, Generali, Hopeville, Kingsbury, Regan, Sprague, Tinker, Walsh, Washington, Wendell Cross, and Wilson schools, the legacy and proprietary EMS will be replaced in its entirety with a modern DDC system. For Barnard, Bunker Hill, Chase, Generali, Sprague, and Wilson, the new boilers and other included equipment under ESM 11: Steam Boilers will be interfaced and integrated with the EMS.

Individual radiators and convectors will have the old, inoperable pneumatic control valves removed, and thermostatic radiator valves (TRVs) installed under ESM 8: Steam Traps & Thermostatic Radiator Valves.

The Chase Building will have a new DDC EMS installed controlling the new steam boiler and individual floor zone temperature sensors for space conditions control during occupied and unoccupied hours. Individual radiators and convectors will have the old, inoperable pneumatic control valves removed, and thermostatic radiator valves (TRVs) installed under ESM 8: Steam Traps & Thermostatic Radiator Valves.

At Waterbury Arts, the existing modern EMS will be retro-commissioned (RCx) exclusively. At the Crosby-Wallace and Wilby-North End Complexes, existing-to-remain EMS will be retro-commissioned in addition to the new DDC to be installed. While these energy management systems are functional, some of the control logic and functionality of the control systems have been intentionally "worked around" as a result of expediency or stop gap solutions to various problems. The RCx scope of this ESM will ensure the functionality of control equipment and systems and also optimize how they operate together in order to reduce energy waste and improve building operation and comfort. Thus, the goal of ensuring comfort and productivity of the building occupants accompanies the goal of cost savings. The process includes investigating and documenting the condition of the systems, identifying existing problems with the controls, and optimizing control of energy systems and formalizing operational procedures. This will include a thorough point-to-point review of the existing hardware and software control points and sequences of operation to ensure that the buildings' systems are operating properly and using the most efficient control strategies available. DDC end devices, such as damper and valve actuators, will be tested and calibrated to ensure that they are functioning as designed. The graphics will be revised and updated, and the updated application software will be installed in the controllers.

Additional Scope of Work

Valves and Dampers

New AHU outside/return/exhaust air dampers will be installed under ESM 4: Air Handling Unit Damper Refurbishment. New DDC points will be installed to monitor and control the new steam and chilled water valve assemblies, and new damper actuators will be provided for the air handlers at Crosby-Wallace, Wilby-North End, West Side, and Kennedy.

City's Responsibilities

City shall be responsible for the removal or relocation of stored items in occupied spaces and mechanical rooms that interfere with work and staging areas. Customer shall clean mechanical room floors prior to start of work to assure they are free of oil, grease or other chemicals. Customer shall relocate furniture, file cabinets, or other obstructions in order to facilitate safe, unimpeded access to areas and equipment or otherwise interfere with the ESM implementation and installation process.

Hazardous Materials Abatement Allowance

The scope of work (SOW) includes a project allowance in the amount of \$890,000 for testing and abatement of hazardous materials that may be encountered, including the abatement of lead and asbestos that may be encountered with this ESM. NORESCO may use this allowance for abatement at its discretion during the construction period. Any hazardous materials testing or abatement required for the completion of the SOW in excess of this allowance shall be the sole responsibility of the City. NORESCO makes no representations or warranties with respect to the amount or character of hazardous materials that may be encountered in the SOW. NORESCO will provide the City with an accounting of this allowance prior to Final Acceptance of the project. Any funds remaining in the allowance may be allocated to additional work through execution of a change order or remitted to the City.

Interface with Existing Systems & Operations

Maintenance Procedures

The removal of pneumatic controls should significantly reduce the current operational and maintenance costs for the energy management systems. The installation of new equipment and the ability of the system to troubleshoot issues remotely should also reduce time spent maintaining the newly installed equipment.

Special Operating Requirements

There are no special operating requirements.

Equipment Information

Manufacturer & Type

New DDC and associated devices will be manufactured by Schneider Electric (TAC I/A) and Automated Logic Controls, and the front end to the TAC system will be licensed by Tridium.

- Schneider Electric United States, North American Divisio, Boston One Campus, 800 Federal Street, Andover MA 01810, 877-342-5173, www.schneider-electric.us
- Automated Logic Controls, Inc. 1150 Roberts Blvd., Kennesaw, Georgia 30144, 770-429-3000, www.automatedlogic.com

Savings Calculations

Pre-retrofit energy consumption is calculated using the systems' fan motor horsepower, heating system and cooling system efficiencies, as well as operational parameters such as hours of operation. Pre- and post-installation end use electrical energy consumptions are calculated in a spread sheet model using the following formulae as its basis:

q = 1.08 · CFM · △T

Where:

q = AHU Cooling (sensible only) load (Btu/hr)
 1.08 = conversion constant (Btu/CFM*hr*°F)
 CFM = AHU air flow (cubic feet per minute)
 ΔT = temperature differential (°F)

q = 4.5 · CFM · △h

Where:

q = AHU total cooling load (Btu/hr)
 4.5 = conversion constant (#*min/CFM*hr)
 CFM = AHU air flow (cubic feet per minute)
 Δh = enthalpy differential (But/#)

• $kW = Hp \cdot 0.746 \cdot LF \cdot VFD \div Eff$

Where:

kW = motor power (kW) Hp = motor Hp (HP)

0.746 = conversion constant (kW/HP)

LF = motor load factor Eff = motor efficiency (%)

VFD = % motor speed based on the fan law
