

BYOD – Connect to Avon Wi-Fi – Directions for iPhone

If your device was previously connected to the **Avon** network, be sure to **'forget'** this network before following these new connection steps.

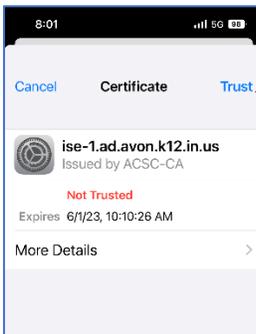

Go to **Settings** >> **General** >> **VPN & Device Management** >> remove both profiles, then go back to **Wi-Fi** and forget the existing Avon network.

Select **Avon** from list of available networks.

Enter Username and Password that you use to log into a school account.

Select **Trust** when asked about the ise-1 certificate. ISE-1 provides authentication services, allowing the network to be joined automatically next time.
