5.3 Diagnostic Assessment Data to Assist with Identifying Student Needs

Terms

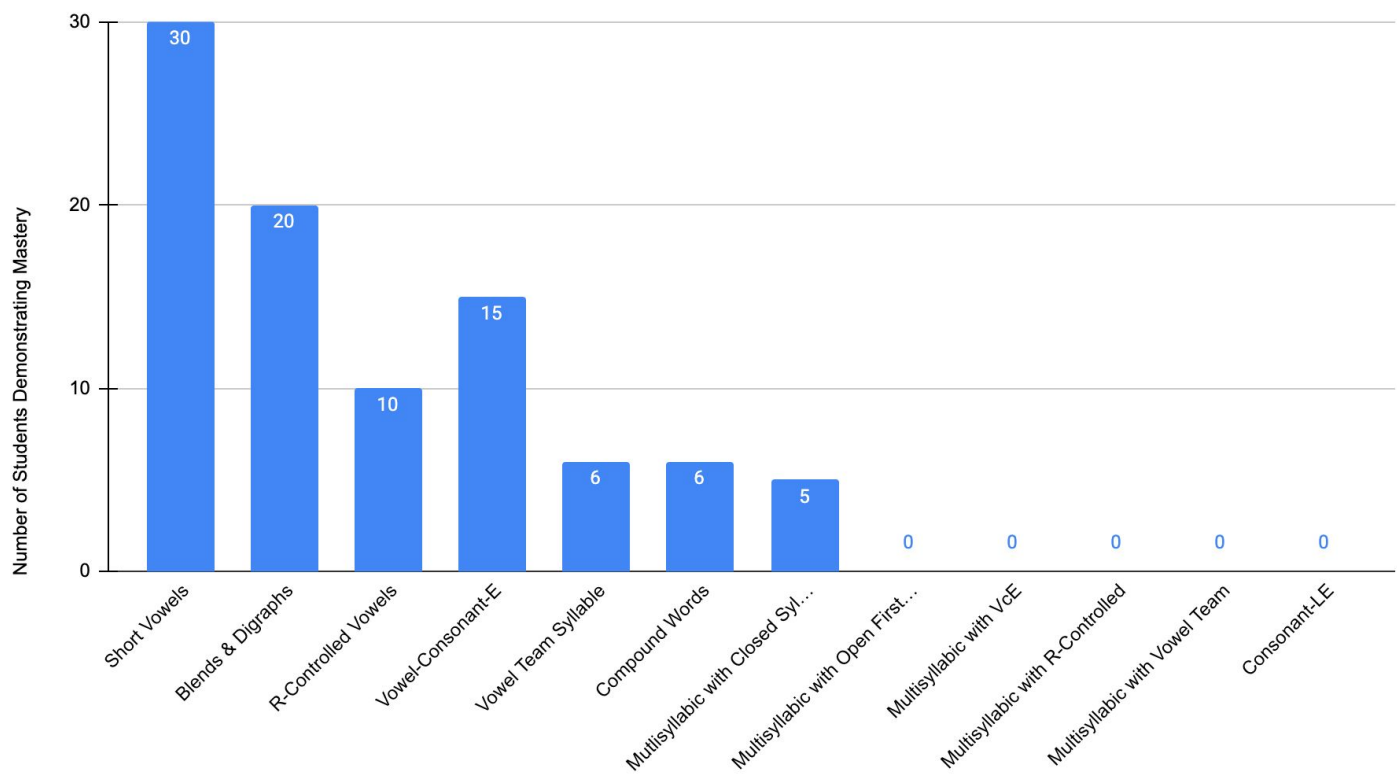

Screeners Assessments - are **the first step in determining students' readiness for on-grade level instruction**. It is a brief initial step in identifying children who may need extra or alternative forms of instruction to make adequate progress in reading and/or in need of further diagnosis.

Example screeners in use: STAR 360 and The Developmental Spelling Analysis (DSA)

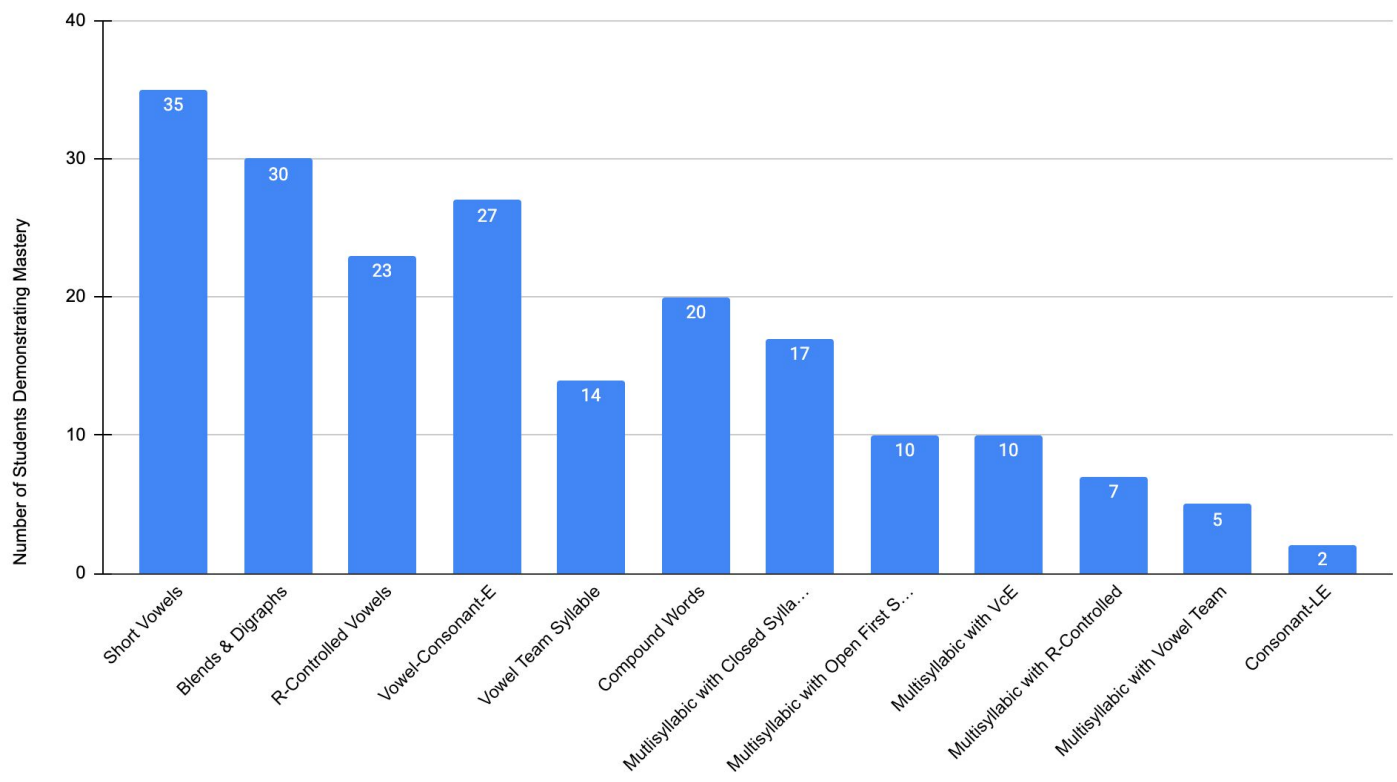

Diagnostic Assessments - help teachers **plan instruction and determine possible intervention strategies related to the needs of the student**. These assessments could be used if a student is performing above or below on-grade level instruction.

Example diagnostic assessments in use: Acadience, CORE Phonics Survey, Informal Decoding Inventory
