

## Facility Improvements: Solar Panels & Electric Buses

The Newark Unified School District (USD) in California worked with ForeFront Power to install a 1.4 MW solar energy and storage system at Newark Memorial High School and Newark Junior High School. The District will now generate 1.7 GWh of renewable electricity annually and is expected to save nearly \$6 million over the 20-year term of the Power Purchase Agreement, with an estimated \$120,000 savings in the first year alone.

“Seeing this solar portfolio live and operational is like looking into the future of our District,” said Dr. Mark Triplett, Newark USD Superintendent. “Locking in rates through on-site solar and battery storage in an era of rising costs helps us better leverage taxpayer dollars to serve our students and their families.”
