

November 1, 2022

Dear GSA Community:

In September, I emailed to tell you that we were having our water tested for PFAS chemicals and that I would let you know when the results came back.

On Monday, we received the results for the well that supplies our main campus, and I am very happy to report that our water passed with a very high margin of safety. The limit for PFAS in Maine is 20 ng/L (nanograms per liter). GSA's results were less than 2 ng/L, the lowest level they report.

Please let me know if you have any questions.

Respectfully,

Tim Seeley
Head of School
