## Why Ulster BOCES?

- **Hands-on instruction:** Students regularly apply both theory and actual skill. Upon course completion, students not only know how a task should be done, but they've also actually done it.
- **Relationships:** Based on the "Crew" model, we intentionally design experiences that are meant to build connections and relationships in our community.
- **Project-Based Learning:** We believe that the most relevant and rigorous learning experiences happen through project-based learning that is supported by equity-based practices.
- **Workplace learning:** As a learning institution specializing in developing employable good humans, workplace learning is at the heart of everything we do. We work to connect young professionals with community and industry partners by creating collaborative opportunities to ensure a thriving workforce.
