

Math Learning Pathways

The pathways below represent the general education mathematics sequence that students will follow to complete their mathematics requirements for graduation. A student's performance and interest will be considered when a recommendation is made for placement that varies from the standard sequence. At the end of fifth grade, students can self-select for the accelerated pathway using the recommended criteria as a guide. Please note, students on the standard pathway are still able to complete Advanced Placement (AP) and honors courses.

Standard Math Pathway
