

How District Website Filtering Works

Distance Learning & Content Filtering: How it Works While Students are On/Off Campus

When students are on campus, inappropriate content is filtered out by the Piper School District web filter, Securly. This filter is tuned to comply with the Child Internet Protection Act (CIPA).

When students are off campus, they are no longer under the restrictions of Securly. It is up to the student's household to manage their own network security and monitor their student's Internet activity and usage.

The Piper School District will not apply filtering or website restrictions when the student is off campus. This responsibility will fall to the parent or guardian.
