

MEASLES

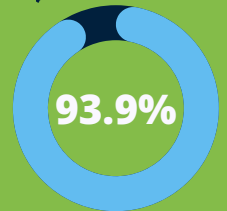

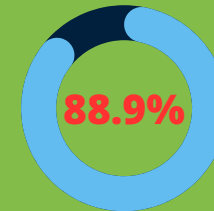

Are you and your child protected?

is very contagious and spreads in the air when an infected person coughs or sneezes.

It is so contagious that if one person is sick with measles, **9 out of 10 people** around him/her **will become infected** if they are not protected.

Kentucky kindergartners are among the lowest in the nation for measles vaccine coverage.

To prevent measles outbreaks and illnesses it is critical to ensure that you and your child are **vaccinated** with the **Measles, Mumps, and Rubella (MMR) vaccine**. Vaccination against measles needs to **start at age 12 months** with a second dose at 4 years old to be fully protected.

Kentucky kindergartners are among the lowest in the nation for measles vaccine coverage.

To reach herd immunity, we need to be at **92%-95%**

Protection with vaccination starts at age 12 months with the Measles, Mumps, and Rubella (MMR) vaccine. A second dose is needed at 4 years old to be fully protected.

Are you and your child protected?

Thanks to safe & effective vaccines, **measles was eliminated** in the U.S. years ago!

Decreased **immunization rates** puts the U.S. at **risk for a measles come-back**. As of February 24, 2023, the KDPH is investigating a **confirmed** case of **measles** in a **Kentucky resident**. While contagious, the resident had contact with many people out in the community.

If you are not protected or your child has not been vaccinated, you both could be at risk.

2 doses are all you need of the **measles, mumps and rubella (MMR) vaccine**. You can **start protecting** your little one as early as **12 months old** by getting the **first dose!**

If you are an adult that is not protected, talk to your healthcare provider today.
