

Attaching Audioshoes and Receivers to Hearing Aids

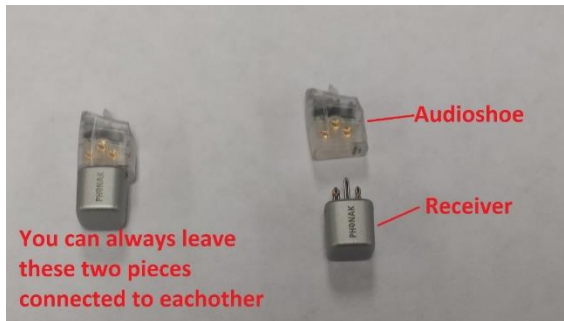

Scan code for video instructions

The receivers allow the microphone to “talk” to the hearing aids.

STEP 1: Attach Receiver to Audioshoe

- Match up the three prongs on the receiver to the three holes in the bottom of the audioshoe.
- Push until you hear a click.

Step 2: Open the Battery Door

Step 3: Line up the notch on the audioshoe with the track on the hearing aid.

Step 4: Push the audioshoe in until it clicks into place.

Step 5: Close the battery door and make sure you hear another click.

In the morning, put the audioshoe/receiver on the hearing aid.

At the end of the school day, remove the audioshoe/receiver from the aid. Store receivers in a safe place.
