# Happy Struggling!

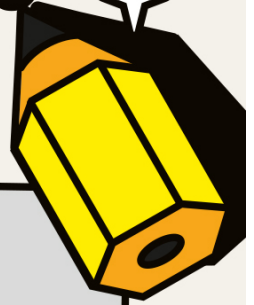

Unlock your child's limitless potential with maths education based in neuroscience.

# ✦ We are Struggly ✦

We are on a mission to help children love maths  
- by seeing it as a creative, visual subject.

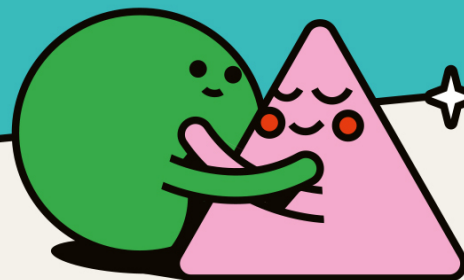

We are translating important research in learning into an engaging, exciting maths experience for students. Struggly gives children tools to approach maths effectively, whether at home or at school. Our tasks and games teach students number sense and number flexibility – the approach to numbers that has been shown to be the difference between low and high-achieving children.

We call our app Struggly to encourage students to struggle, which is known to increase brain activity.

Struggly is distinct in providing parental support with tips and advice to guide their children's mathematics learning, including six learning keys for developing a limitless mindset.
