Dodecahedron Assembly Instructions

Materials needed: scissors; glue or tape (glue stick or double-sided sticky tape recommended); markers, pencils, and crayons as desired

1. Cut out all twelve pentagon shapes along solid lines. Fold tabs in at dotted lines. (All dotted lines should be on the inside and not show.)
2. Color and decorate each pentagon if desired.
3. Start with one pentagon. Glue a pentagon to each side, creating a flower-like shape with five "petals" around the center pentagon, as shown.

4. Now make an identical flower-like shape with the other six pentagons.
5. Glue the two shapes together side by side. One should have two "petals" at the top; the other should have one petal at the top, as shown.

6. Now begin gluing the tabs to one another so that you have two halves of the dodecahedron.

7. Glue the tabs of the two halves to form the shape on the front of the package. Your shape is complete!
