

Special Dietary Needs

Food Services is happy to accommodate students with special dietary needs. Students must provide written medical documentation from the treating physician in order to provide for this accommodation. This form is located on the website. Students with food allergies also must provide written documentation from their doctor. This documentation includes, but is not limited to, a statement of what the allergy is, what dietary changes from the traditional school meal are necessary, what specific foods must be omitted or substituted and what dietary items can be used to replace them with. This documentation should be given to your child's cafeteria manager.
