

Hazardous Materials

The Board of Education recognizes its responsibility to take reasonable steps to ensure an environment, which is reasonably secure from known hazards.

Hazardous materials include any substance or mixture of substances that poses a fire, explosive, reactive, or health hazard as more fully defined by law. There are many areas of the school operation, from science laboratories and art departments to custodial services and vehicle maintenance, which use a variety of materials that are hazardous.

The Board, through the superintendent, shall cause to be created procedures, which address the purchase, storage, handling, transportation, and disposal of hazardous materials for all school facilities and operations including instructional areas. Emergency response actions and evacuation plans shall be coordinated with the procedures.

The procedures shall comply with all local, state, and federal laws and regulations, which pertain to the safe and proper storage, transportation, and disposal of hazardous materials.

The goal of the procedures shall be to set into place an ongoing process by which each location in the district may begin a program of identifying and managing potentially hazardous materials. District personnel shall be encouraged to make less dangerous substitutions for hazardous substances to the extent possible and to minimize the quantities of such substances stored on school property.

Appropriate school personnel shall be trained to take precautions to prevent accidents and to handle them in the event they do occur.

It is not the intent of the Board to expand or modify the district's potential liability exposure through the adoption of this policy. The district's voluntary compliance with any statute or regulation to which it is not otherwise subject shall not be construed to create or assume any potential liability under any local, state, or federal law or regulation.
