

Kingswood Regional High School

2021 Youth Risk Behavior Survey Report

Time Trends by Sex and by Grade

Carroll County Public Health Region

Introduction

The 2021 Youth Risk Behavior Survey (YRBS) report presents data which demonstrate the association between health-risk behaviors by sex and grade. We hope this report is useful in understanding high school student behaviors and assists you in developing educational programs, curriculum and communication tools to encourage and support healthy behaviors among students in your communities.

School-level Estimates

The 2021 survey response rate at Kingswood Regional High School was 72%, meaning 546 of 755 enrolled students took the survey¹. School-level estimates are unweighted and based on a convenience sample of students in attendance and not opting out of participation in the YRBS on a given date and time during the school year. Results could be less representative if specific classrooms or classroom types were not included in the survey. To account for this and provide risk-behavior estimates for the entire school, we extrapolated survey results using school enrollment data.

State and Regional Estimates

State and regional estimates are calculated from a random sample developed using scientific survey methods. These methods ensure the respondents are representative of students in the region in the state. The results account for student, classroom, school, and regional factors. The random sample is not designed to provide school-level estimates. Note: access to region-level results were first made available in 2015 and are not available prior to that year.

Data that had a representative sample of students, appropriate documentation, and an overall response rate greater than or equal to 60%² were weighted.

This report is produced in a partnership with the NH Department of Education and the NH Department of Health and Human Services.

Responses by Sex and Grade*

*Total students in bar graphs may not reflect the total surveyed as some students may choose not to self-identify by sex or grade.

¹Total students in bar graphs may not reflect the total surveyed as some students may choose not to self-identify by sex or grade.

²Overall response rate is computed as (number of participating schools/number of eligible sampled schools) X (number of usable questionnaires/number of eligible students sampled in participating schools), rounded to the nearest integer.

Regional Public Health Network Substance Misuse Prevention Coordinators are available to assist schools in coordinating community projects that promote healthy behaviors and educate school officials and stakeholders. Coordinators may also assist schools in obtaining school and community grant funding.

Notes

You may find very small discrepancies between the 2021 estimates reported in this report and the results reported two years ago. The differences are caused by an improved data cleaning routine in the new survey. The results from this 2021 analysis and reports should be used if you find any discrepancies.

Change Log

v2.0: Final report released March 13, 2023.

v1.0: Preliminary report released October 7, 2022.
