

# SUBJECT LEARNING JOURNEY

## SCIENCE - BIOLOGY

### INTENT

Our intent is to provide a high quality science education with meaningful memorable experiences and to prepare our students for life in an increasingly scientific and technological world. We hope to promote both a curiosity and a love of science within our students and to inspire them to consider a future career involving it. In Biology topics we aim to develop skills to help study the living world and to increase each student's knowledge and understanding of organisms and biological processes.

### IMPLEMENTATION

### IMPACT

What is the impact of studying Biology?

The biological world is fascinating and we hope that we will have inspired our students whilst they have been studying it. They will have had meaningful, memorable experiences that will last a lifetime. Students will have a greater understanding of the living world and, in particular, how their own body works. They will have a wider variety of skills linked to both scientific enquiry (experimentation) and biological knowledge. The development of these skills will be useful to them in the future, especially if they choose to pursue a career that involves science.
