

Add Gmail to an iOS Device

There are a couple of different ways to do this. I recommend using the gmail app and google calendar app from the apple app store, as they mimic all the extra features of the web version of the google applications. The only drawback is some iOS apps want to use the default mail client to send emails directly from the app. For this you will need to at least set up the mail client for just mail.

1. Click Settings

2. Go to Mail, Contacts, Calendars

3. Choose Add Account

4. Select google

5. Enter your full email address (for example: user@mvsc.k12.in.us)

Let this iPad access your mail and other [Google Account data](#)

Enter your email

6. Enter your password

7. When asked what to select, I recommend doing email and calendar. If you check contacts and this is on your personal phone, it will merge your contacts from your phone with your email contacts

	Cancel	Gmail	Save
 Mail		☒	
 Contacts		☐	
 Calendars		☒	
 Notes		☐	

8. Select Save
