BUSINESS & TECHNOLOGY PATHWAY

OUR VISION
San Andreas Career Pathways are working to inspire, engage and empower students with high-quality career-technical education through hands-on, work-based learning. San Andreas will guide and support students to meet their goals of graduation, higher education, and meaningful employment ultimately resulting in the development of successful members of society and community leaders.

MISSION
The Business & Technology Pathway is devoted to career exposure and utilization of technology, terminology, and soft skills needed in the business industry. Students will participate in varied career exploration, earn work-based learning while running a school business, and collaborate with local businesses, industry experts and community partners. Students gain relevant, student-led experiences in business and technology while preparing for job markets, future employment, and/or postsecondary education after graduation.

DESCRIPTION
This pathway offers students cutting-edge technology, business, and agriculture training. Students obtain authentic fieldwork by managing our Quake Innovators Student-Ran Business. Our students learn about modern, growing technologies in addition to working and harvesting produce in the progressive hydroponics lab and greenhouse. Students also travel to and work with community businesses, schools, and agencies. Students deliver produce to Nutrition Services, restaurants, and community food banks. This pathway encourages student innovation and creativity while developing solid business practices.
Students will be given the opportunity to explore careers in healthcare and emergency medical services. Students will gain a foundation and understanding of medical terminology, body systems, disorders, diseases, and pre-hospital care for the sick and injured. Students will develop medical skills within the responsibilities of a first responder and proper procedures of emergency care. This pathway will prepare students who are interested in a career as an emergency medical technician, paramedic, and nurse. Students will have the opportunity to earn one or more industry certifications that can be used to assist students in obtaining a job.
