

Q & A for RFP #001-17

Copy, Print and Multi-function products

Under Specifications and Features Common to All Machines

*Networked based accounting software to track print and copy volume per user. Here are the questions:

- How many users will need to be tracked by the system? **Approximately 1000 staff**
- Are students allowed to print / copies on the devices? **Selected devices yes, district-wide no**
- How many total print servers does the district have? **One, it is a dedicated, clustered, virtual machine**
- In order to track copy usage to an individual, users must be identified at the device. Do the users at the school district use any sort of ID badge / Proximity card? **Not at this time but may in the future**

1-Clarification on print around errored documents. **This feature enables the MFP to continue printing even if a users' print job has errored and is stuck in the queue (for instance, if the job is calling for a paper size which is not present in the machine). Please indicate if your proposed equipment includes the feature or not.**

2-Under specifications D you list an office finisher. Is that just an external stapling finisher? **The office finisher could include both a stapler and a 2/3 hole punch. Neither are required but please indicate if your equipment includes them, or if they can be added as an option**
