Appendix B: Transitional Kindergarten Projections

INTRODUCTION AND DISTRICT BACKGROUND

The Manteca Unified School District has contracted with Davis Demographics & Planning, Inc. (Davis Demographics) to develop and analyze demographic data relevant to the District's facility planning efforts. The scope of contracted work includes: mapping the District, geocoding a student file that is usually representative of October's official head count, developing and researching pertinent demographic data, identifying future residential development plans (if any) and developing a five-year student population projection. Davis Demographics will then assist the District in developing solutions for housing future student population. This study was prepared to assist the District's efforts in evaluating future site requirements and attendance area changes.

The purpose of this report is to identify and inform the District of the trends occurring in the community; how these trends may affect future student population; and to assist in illustrating facility adjustments that may be necessary to accommodate the potential student population shifts. The District can then use this information to better plan for the need, location and timing of facility or boundary adjustments.

The **Sources of Data** section details where the two sources of data, geographic and non-geographic, are collected and how each data item is used in the Ten-year student population projection model.

The **Ten-Year Projection Methodology** section discusses, in detail, how the factors used in the study were calculated and why they were used. These factors include the calculation of incoming kindergarten classes, additional students from new housing (referred to as student yield), the effects of student mobility, and a detailed review of planned residential development within the District.

The **Student Resident Projection Summary** sections are a review of SY 2022/23's student resident projection results. Included in these sections are a district-wide student population projection summary and a projected resident student population summary for each existing attendance area and study area.

While reading this report, it is important to remember that this is a snapshot of current and potential student population based upon data gathered in Fall 2022. Population demographics change, development plans change, funding opportunities can change, District priorities can change, and therefore, new projections and adjustments to the overall Facilities Master Plan will continue to be necessary in the future.

EXECUTIVE SUMMARY

Davis Demographics is assisting the Manteca Unified School District to plan for future student population changes. By factoring current and historical student data with demographic data and planned residential development, Davis Demographics calculated a ten-year student population projection. These projections are based on the residence of the students and are designed to alert the District as to when and where student population shifts will occur as well as assist the District in determining how best to add capacity.

The Manteca Unified School District is projected to grow over the next ten years. It is expected to climb from a total of 16,411 tk-8 students to 18,640 k-8 students by 2032. This amounts to an increase of 2,229 tk-8 students over a 10-year period. Growth is also expected to occur in the District's High School student population as well, as an additional 1,086 grade 9-12 students are projected during the same period. In the end, the District can expect to see its high school student population reach 9,168 students by 2032. This amounts to a total increase of 3,316 tK-12 students through 2032. The projected growth is attributed to 2 key factors. The most important of these two factors is the amount of planned residential development that may get built over the next 10 years. Conversations with district staff, city planners, and developers call for 5,472 units to be built by 2032 that will help drive student population growth. The year 2022 experienced a hike in mortgage interest rates which lead to a slowdown in new home sales. New home construction will need to continue to be monitored to identify whether this trend will continue to have a long-term impact on enrollment in the future. High mobility factors within areas of the school district also indicate that there is currently an in-migration pattern of school-aged children within some of the existing neighborhoods of the school district.

There are no schools with overcapacity capacity concerns at the moment. Nile Garden ES will eventually experience overcapacity issues within the next ten years. This is based on analyzing the max program capacity figures at each elementary school. The district is exploring alternatives to relieve projected capacity at this site over the next 10 years.

At the high school level, Sierra high school is the only campus with capacity concerns as soon as 2028 based on the Revised program capacity. Boundary re-alignments with neighboring high school attendance areas may be able to address the expected overcapacity within Sierra high school's area. Future capacity concerns at Sierra high school may depend on which high school its resident student population decides to attend in the future.

SECTION ONE - METHODOLOGY

SOURCES OF DATA

Geographic Map Data

Five geographic data layers were created for use in the 10-year student population projections:

1. Street Centerline Database
2. Study Areas
3. Schools
4. Students – Historical and Current
5. Planned Residential Development

1) Street Centerline Data

Davis Demographics has acquired a digital street centerline map of the School District from San Joaquin County. The street database has associated attributes that contain, but are not limited to, the following fields: full street name, address range, and street classification.

The main function of the streets is in the geocoding process of the student data. Each student is geocoded to the streets by their given residence address. The geocoding process places a point on the map for every student in the exact location the student resides. This enables Davis Demographics to analyze the student data in a geographic manner.

Another vital utilization of the digital street database is in the construction of study areas. Freeways, major streets, and neighborhood streets are generally used as boundaries for the study areas.

2) Study Areas

Study areas are small geographic areas, similar to neighborhoods, and the building blocks of a school district. Study areas are geographically defined following logical boundaries of the neighborhood such as freeways, streets, railroad tracks, or rivers. Each study area is then coded with the elementary, middle, and high school that the area is assigned to attend. By gathering information about the district at the study area level, Davis Demographics and the District can closely monitor growth and demographic trends in particular regions and identify the potential need for boundary adjustments or new facilities.

3) Schools

The District provided school facility location information to Davis Demographics for the purpose of mapping the District facilities. The school information includes the school name, address, unique ,code and capacity.

4) Student Data

a. Historical Student Data - Historical enrollment is used to compare past student population growth and trends as well as the effects of mobility (move in, move out from existing housing) throughout the District. Davis Demographics utilized the four (4) previous years' (19/20, 20/21, 21/22, 22/23) geocoded students as historical data.

b. Current Student Data - A student data file for October 5, 2022 (received by computer data file from the School District) summarized by grade level and study area is used as a base for student population projections. Existing students were categorized by study area through the geocoding process that locates each student within a particular area based upon their given address. The projections run each of the next 10 years from school year 2022/23 through school year 2032/2033.

c. Student Accounting The Student Accounting Summary (Table 1) indicates the total student enrollment as of October 5, 2022, and the number of students used in the ten-year student population projections. The projection model is based on student residence and excludes students residing outside of the District boundaries, students unable to be address-matched, and special education students (special education students usually attend a school that services their particular need).

Student Accounting Summary School Year 2022/23 Enrollment (10/05/22)	
Students in Forecast	
Resident Students (students residing within district boundaries)	
General Education Students	23,122
Special Education Students	1,105
Total Students in Forecast	**24,227**
Students Not in Forecast	
Non-Resident Students (students residing outside of district boundaries)	
General Education Students	254
Special Education Students	12
Independent Study Students	
Grade -2 Students	
Grade -2 Student	210
Special Education Students	
Total Students Not in Forecast	**476**
Total Students in District Summary	
Students Not in Forecast	24,227
Total Students Not in Forecast*	476
MANTECA U.S.D. 2022/23 K-12 Enrollment	**24,703**
*Students not in forecast have been added to the district forecast summary on a straightline basis	

Table 1– Student Accounting Summary

Please Note: Numbers above reflect the CBEDS October 6th reporting date, and do not reflect the official February certified numbers due to demographic study completion timelines.

5) Planned Residential Development

This data was obtained through discussions with the District, city agencies, county agencies and major developers within the district boundaries. Data includes development name, location, housing type, the total number of units, and projected move-in dates (phasing). Phasing for planned housing is factored into the ten-year projections. (See **SECTION 2** for a detailed listing of the planned residential development). In the student population projection, Davis Demographics includes all Approved and Tentative tract maps in addition to any planned or proposed development that possibly will occur within the projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

Data Used for Variables

Three sets of data were compiled and reviewed for use in the ten-year student population projections by residence:

1. Births by Zip Code
2. Mobility Factors
3. Student Yield Factors

1) Births by Zip Code Data

Birth data by postal zip code was obtained from the California State Department of Health for the years 2007-2021 and roughly correlated to the Manteca Unified School District. Past changes in historical birthrates are used to estimate the future incoming kindergarten student population from existing housing.

2) Mobility Factors

Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, which is essentially a modified cohort, is applied as a percentage of increase/decrease among each grade for every year of the projections.

3) Student Yield Factors (SYFs)

Student Yield Factors were calculated by Davis Demographics from a house count of existing dwelling units throughout the District. This survey includes three housing types: single-family detached, multi-family attached (townhomes, condominiums, duplexes, triplexes, quads), and apartments.

The student yield factors, combined with planned residential development units are used to determine the number of students generated from new residential housing development projects. Student Yield Factor calculations will be discussed again in the **Ten Year Projection Methodology** section.

TEN-YEAR PROJECTION METHODOLOGY

The projection methodology used in this study combines historical student population counts, past and present demographic characteristics, and planned residential development to forecast future student population at the study area level. District-wide projections are summarized from the individual study area projections. **These projections are based on where the students reside and where they should be attending school. We use the actual location of where the students reside, as opposed to their school of enrollment, in order to provide the most accurate estimate of where future school facilities should be located.** The best way to plan for future student population shifts is to know where the next group of students will be residing. The following details the methodology used in preparing the student population projections by residence.

Ten Year Projections

Projections are calculated out ten years from the date of projection for several reasons. The planning horizon for any type of facility is typically no less than five years, often longer. Five years are usually sufficient to adequately plan for a new facility. It is a short to mid-term solution for planning needs. Projections beyond ten years are based on speculation due to the lack of reliable information on birthrates, new home construction and economic conditions.

Why Projections are Calculated by Residence

Typically, school district projections are based on enrollment by school. However, this method is inadequate when used to locate future school facility needs, because the location of the students is not taken into consideration. A school's enrollment can fluctuate due to variables in the curriculum, program changes, school administration and open enrollment policies. These variables can skew the apparent need for new or additional facilities in an area.

The method used by Davis Demographics is unique because it modifies a standard cohort projection with demographic factors and actual student location. **Davis Demographics bases its projections on the belief that school facility planning is more accurate when facilities are located where the greatest number of students reside.**

The best way to plan for facility requirements is to know where the next group of students will be residing. The following details the methodology used in preparing the student population projections.

PROJECTION VARIABLES

Each year of the projections, 12th-grade students graduate and continuing students progress through to the next grade level. This normal progression of students is modified by the following factors:

1) Incoming Kindergarten

Live birth data is reported to the California State Department of Health by the resident postal zip code of the mother. Davis Demographics uses the birth data by zip code roughly correlating to the District boundary and applies the data accordingly. If need be a different birth factor can be applied to various areas of the District.

Incoming kindergarten classes, for existing homes, are estimated by comparing changes in past births in the area. Table 2 illustrates the total births for each zip code in the Manteca Unified School District from 2007 to 2021. Davis Demographics assumes the current kindergarten class (2022/23) was born five years ago (2017). Future incoming kindergarten classes are estimated by comparing the number of births in 2017 to the number of births in 2018 – 2021. Davis Demographics compared the total births in 2017 to the total births in 2018 to determine a factor for next year's kindergarten class (2022/23). The 2017 births were compared to 2019 (2024/25's K class), 2017 to 2020 (2025/26's K class) and 2017 to 2021 (2026/27's K class). Births for the projected Fall 2027, 2028 and 2029 - 2032 were based on the average birthrates of the previous four years. Due to high mobility rates with potential incoming kindergarteners (kids under age 5 moving in and out of the boundary), the actual incoming kindergarten classes may vary.

Table 2 Births by Zip/ Kindergarten Births by Zip

		Births	Birth Rate		
Birth Year	Kinder Year	Zip Code 95231 & 95330	% Change*	Birthrate Used in Forecast	School Year
2007	2012	393	108.9%		2012/13
2008	2013	314	87.0%		2013/14
2009	2014	341	94.5%		2014/15
2010	2015	376	104.2%		2015/16
2011	2016	349	96.7%		2016/17

2023	2028		104.6%	1.046	2028/29
2024	2029		104.6%	1.046	2029/30
2025	2030		104.6%	1.046	2030/31
2026	2031		104.6%	1.046	2031/32
2027	2032		104.6%	1.046	2032/33

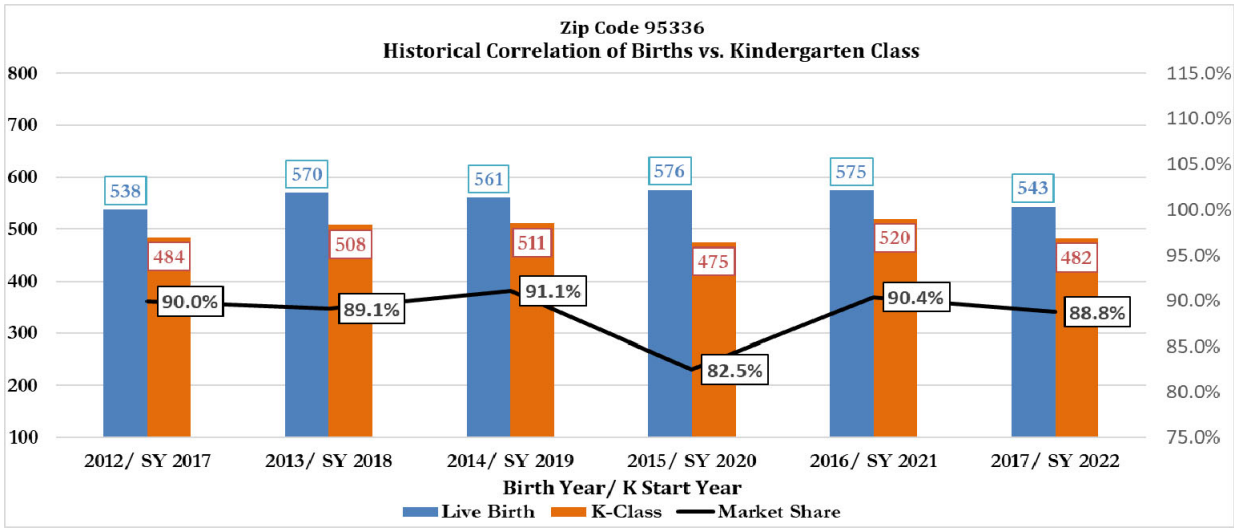

** % Change refers to the change in total births for each year compared to the base year.*

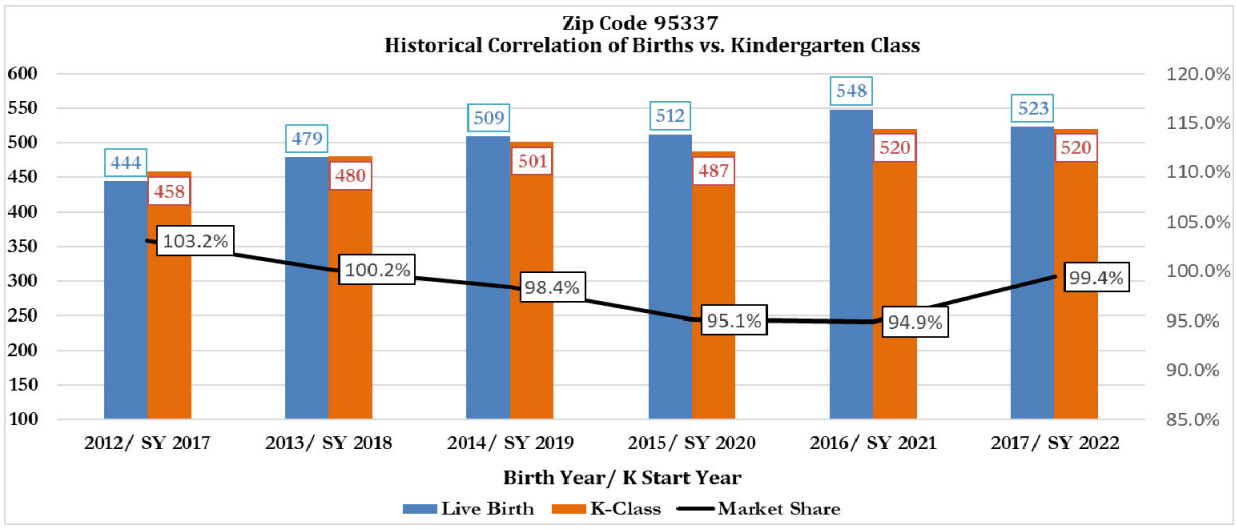

Source: California Department of Health Statistics

Births vs Kindergarten Capture Rate

Zip codes 95206 and 95215 have been excluded from the analysis because they only cover a small percentage of the school district boundary.

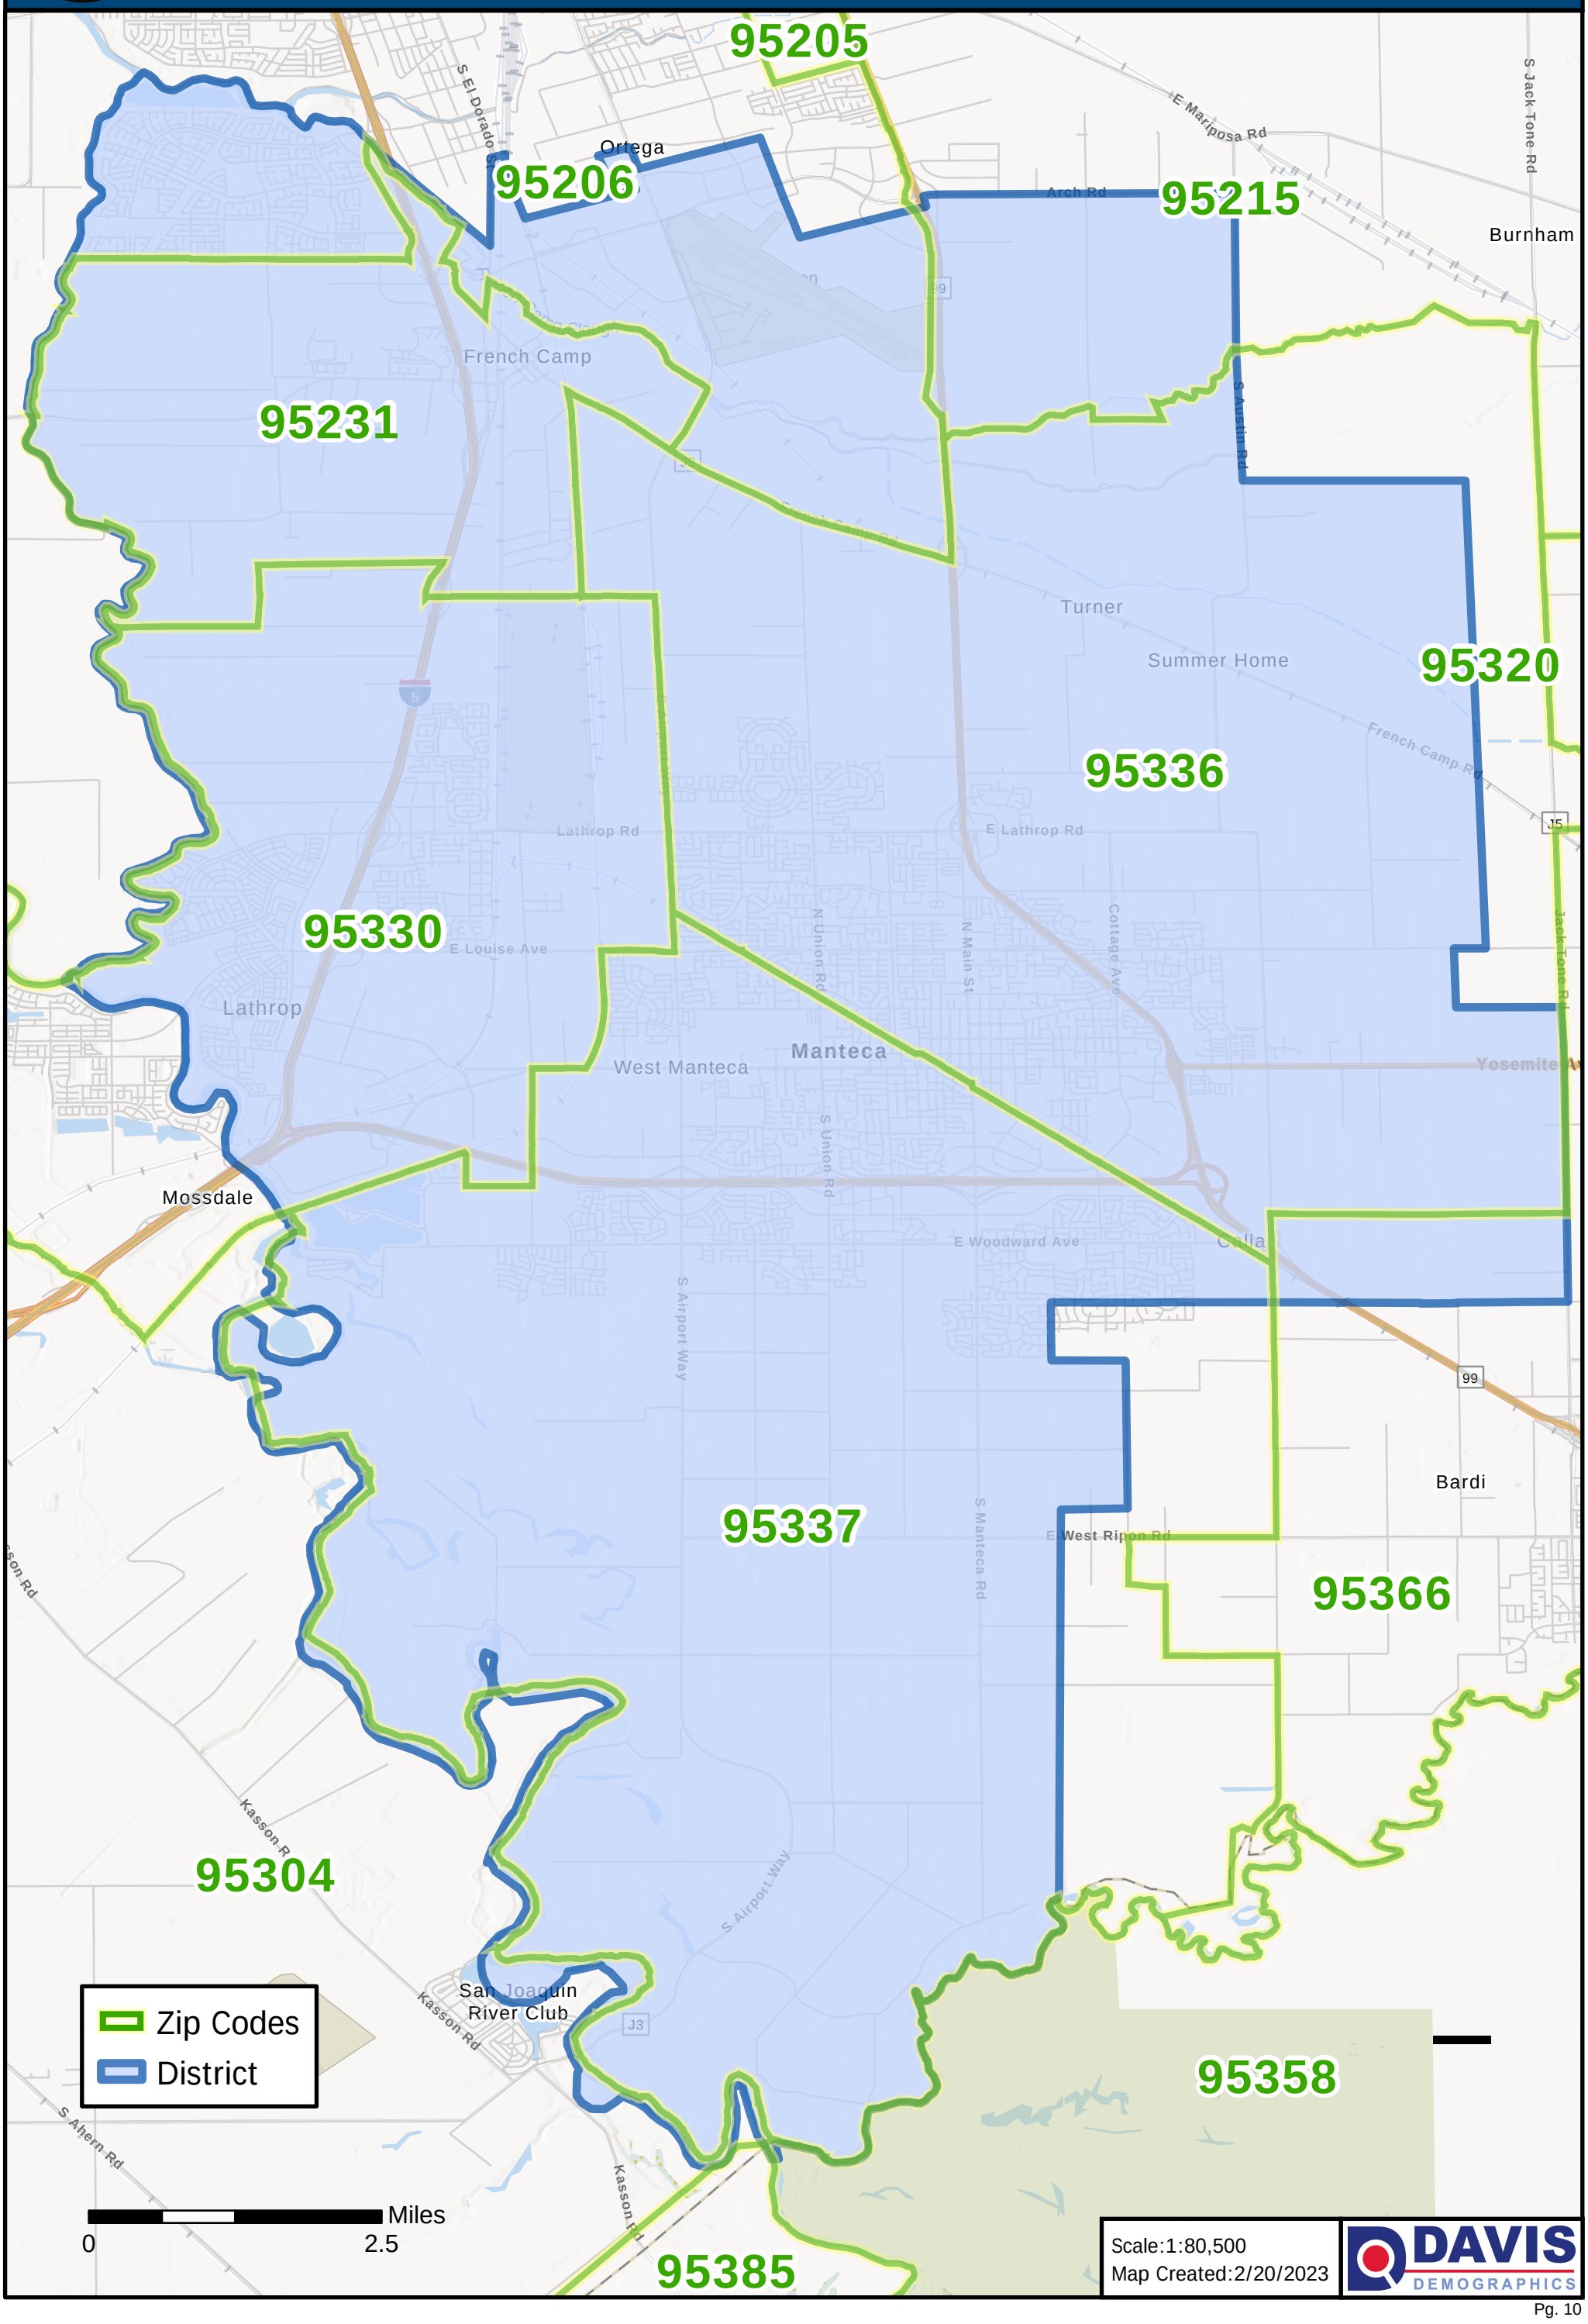

Incoming Transitional Kindergarten

Incoming transitional kindergarten (TK) classes, for existing homes, are estimated by comparing changes in past births in the area. Incoming TK classes are determined by multiplying the existing TK class (2022/23) by the percent increase/decrease in the births for the year the kindergarten class was born (2018). Assuming that the 2022/23 school year TK class was born in 2018; Davis Demographics compared the total births in 2018 to the total births in 2019, to determine a factor for next year's TK class (2023/24). The 2018 births were compared to 2020 (2024/25's TK class) and 2018 to 2021 (2025/26's TK class). The birth analysis for the remaining years was done was based on the most recent birth rate trend from for the forecasted school year 2025. An additional adjustment increase was made to the transitional kindergarten birthrates to take in to account the integration of the newly implemented Universal TK in the state of California.

Please see **Appendix B** for detailed Universal TK Methodology and forecasts by attendance area.

Manteca Unified School District

2022-23 Zip Codes

Student Mobility Factors

Student mobility factors further refine the ten year student population projections. Mobility refers to the increase/decrease in the migration of students within the District boundary (move-in/move-out of students from existing housing). Mobility, similar to a cohort, is applied as a percentage of increase/decrease to each grade for every year of the projections.

A net increase or decrease of zero students over time is represented by a factor of **1.000**. A net student loss is represented by a factor less than **1.000** and a net gain by a factor greater than **1.000** (see Table 3).

Example:

	100	Kindergarten students in fall 22/23
x	1.14	(August Knodt 1st grade mobility)
=	114	1st grade students in fall 24/25

Having historical student data categorized by Study area is extremely helpful in calculating accurate Student Mobility Factors. Davis Demographics was able to utilize the last four year's (school years 2019/20, 2020/21, 2021/22, 2022/23) student data. The 2019/20 student data was compared to 2020/21, 2020/21 to 2021/22, and 2021/22 to this year's student data at the Study area level. Grades 1-12 Mobility were all calculated to correspond with the elementary school attendance areas.

Attendance Area	K to 1	1 to 2	2 to 3	3 to 4	4 to 5	5 to 6	6 to 7	7 to 8	8 to 9	9 to 10	10 to 11	11 to 12
August Knodt ES	1.14	1.01	1.02	1.00	1.01	1.02	0.94	0.98	0.94	1.08	0.96	0.97

3) Student Yield Factors

The Student Yield Factors, when applied to planned residential development units, determine how many additional students will be generated from new construction within the District (see **Section Two** for details on planned residential development)

Student Yield Factors (Student Generation Rates) were calculated by Davis Demographics in the Fall 2022 school year. Student counts were based on the school district student data. The student data is compared spatially to recently built housing types (single-family detached, multi-family, single-family attached, apartments, etc.) by overlaying the student points by grade configurations to the development site polygons

Two sets of data are required to calculate Student Yield Factors: a current student file (provided by the District) and current housing unit data (taken from the San Joaquin County Tax Assessor files/planned residential development information. Each student record and tax assessor record is geocoded by their given address. The two database sets are then linked by a common address. This allows Davis Demographics to associate each student with a specific housing unit. For the District, three general categories of housing units were analyzed: Single-Family Detached (SFD), Multi-Family Attached (MFA) and Apartments (APT).

Before the SYFs can be calculated from the current housing stock, the year of construction for each housing type must be determined. In general, new housing attracts young families with elementary school-aged children. Over the next 12 to 15 years, the children grow older and pass through the grades. This cycle is then repeated throughout the life of the home. Identifying the year of construction and the number of current resident students in recently built housing units assists in estimating the number of new students generated from future residential development.

In addition, other elements apart from the year of construction can be assessed. These elements include, but are not limited to, housing type, number of bedrooms, geographic location (study area), the value of home, etc. Once a determining element is decided upon, simple calculations are performed to produce a Student Yield Factor. The total number of units for that housing type then divides the number of current students residing in each housing type.

Davis Demographics calculated three different Student Yield Factors; for the different residential unit types scheduled for construction(district-wide), for each elementary attendance zone, and units built within the past 6 years (district-wide). Please note that no MFA units were built during this time span. Davis Demographics, therefore, had to revert to 2004-2005 to find a sampling of 26 MFA units that were built. Upon examining the results, Davis Demographics determined that the Student Yield Factors for units built within the last 6 years (district-wide) for SFD and APT would most accurately estimate the number of students new housing would yield. These units are similar in size and location to the planned residential development. Since there was not enough of a sampling for MFA units, Davis used a combined APT/MFA unit sampling to come up with an MFA SYF. It was decided to apply that SYF to the planned residential development within the District over the next ten years. This sample should reflect a reasonable number of students expected from planned residential developments. These factors were updated as of Fall 2022.

2022

Unit Type	Number of Units	Number of Students				Yield Factors				Unit Type
		K-6	7-8	9-12	K-12	K-6	7-8	9-12	K-12	
SFD	3550	1101	254	480	1835	0.310	0.072	0.135	0.517	SFD
APT	850	84	17	35	136	0.099	0.020	0.041	0.160	APT

***A sample of 26 MFA (Townhomes) (built 2004-2006) units located off W Alameda St and Pearl Pl were used in the survey for the MFA/APT Surve*

****A sample of Paseo Villas (2006) apartments along with other recenlty built apartments were used in this survey.*

****Unit totals include units built within the last 6 years and exclude age resitricted units*

*****2019 Student Yield Factors were used due to abnormal enrollment patterns in 2020 due to covid*

Table 4 – Student Yield Factors

4) Planned Residential Development

Closely related to the Student Yield Factors are planned residential development units. Planned residential development data is collected to determine the number of new residential units that will be built over the time frame of the student population projections. The units built within the next ten years will have the appropriate SYF applied to them to determine the number of new students the planned residential development will yield.

This data was obtained through discussions with the District, city agencies, county agencies and major developers within the District boundaries. Data includes development name, location, housing type, total number of units and projected move-in dates (phasing). Phasing for planned housing is factored into the ten projections (see **SECTION 2** for a detailed listing of the planned residential development).

In the student population projection by residence, Davis Demographics includes all Approved and Tentative tract maps in addition to any planned or proposed development that possibly will occur within the projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

APPLYING THE VARIABLES TO GENERATE THE PROJECTIONS

The following paragraphs summarize how Davis Demographics uses the factors to determine the student population projections. Remember that these projections are based on residence.

Manteca Unified School District has been divided into 334 study areas. Each study area is coded with the school code of the elementary and high school attendance areas it falls within. The residential projections are calculated at the study area level. This means that Davis Demographics conducts 334 individual projections that are based upon the number of students residing in each study area.

The first step in calculating the projections is to tally the number of students that live in each study area by each grade (Kindergarten through 12th grade). The current student base (school year 2022/23) is then passed onto the next year's grade (2022's K become 2023/24's 1st graders, 2022/23's 1st graders become 2023/24's 2nd graders, and so on). After the natural progression of students through the grades is applied, Birth Factors are multiplied to the current kindergarten class to generate a base for the following year's kindergarten class.

Next, a Mobility Factor is applied to all grades. Again, these factors take into account the natural in/out-migration of students throughout the District. The mobility factor is applied to each student in every grade (K-12). A unique mobility factor is applied to each elementary school attendance area determined by the mobility factor study.

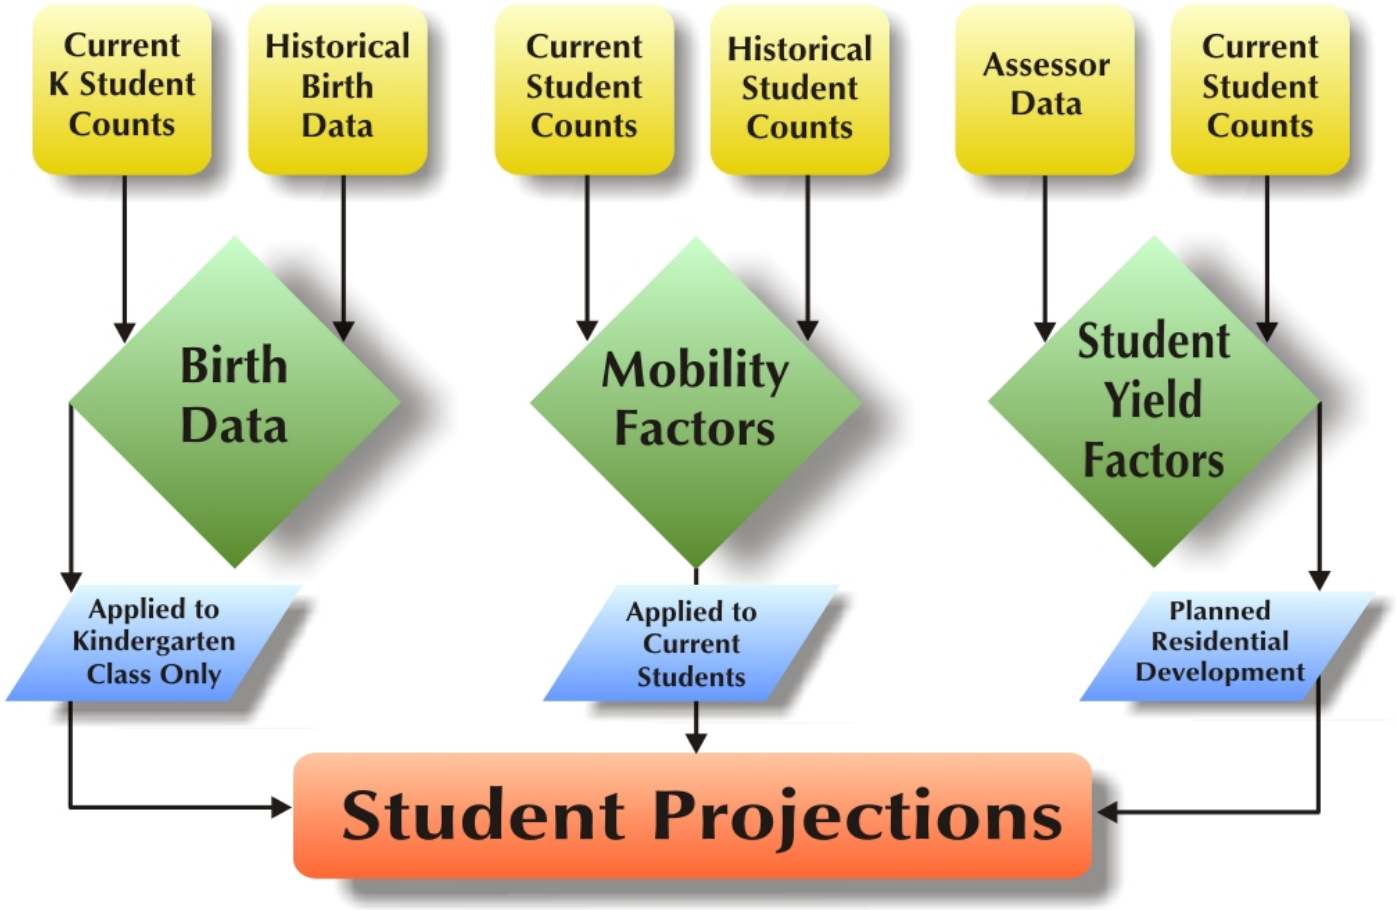

The last essential layer applied to the projections deals with additional students from planned residential development. This is a simple calculation, again conducted at the study area level, where the estimated number of new housing units for a particular year is multiplied by the appropriate Student Yield Factor. For example, if 100 single-family detached (SF) units are to be built in a specific study area in a given year, then you would multiply this number (100) by the SFD K-6 student yield factor (.310) and the resulting number (31) is divided evenly among the seven grades.

To finish generating the projections by residence, the same process is conducted for each of the 334 study areas. Once the projections have been run at the study area level, then it is simple addition to determine projections for each of the District's attendance areas or for a district-wide summary. For example, the residential projections for the August Knodt Elementary attendance area is simply the summary of all of the study areas that make up this specific attendance area (see Section Five, Six and Seven) for the projections of each elementary and high school attendance areas).

The District Summary for the projections (Section Four) is a total summary of all 334 study areas. The projections excludes all of the students that attend a District school but live completely outside of the District's boundaries, and students unable to be geocoded, special education students, alternative education, and independent study students. These students are factored back into the projections by calculating their current overall percentage of the student population, applying the percentage to future years and adding it to the resident projections (please see the Attendance Matrices in Section Three for a breakdown of the out-of-district and unmatched students by school). Davis Demographics adds the current total out-of-district and unmatched students to each year of the projections because there is no way to accurately forecast these students in the future.

Current and historical students, geographic data and non-geographic data are used to calculate the factors used in the student population projections by residence. These factors are applied using SchoolSite and projections are calculated for each study area for each grade.

Projections by Residence Flowchart

SECTION TWO – PLANNED RESIDENTIAL DEVELOPMENT

This data was obtained through discussions with the major developers within the District boundaries, affiliated Planning Departments and local developers. A database and map of the planned residential development was created, including, when available, project name, location, housing type, total number of units and estimated move in dates (phasing schedule). Projected phasing is based upon occupancy of the unit and is used to help time the arrival of students from these new developments.

In the student population projection by residence, Davis Demographics includes all Approved and Tentative tract maps in addition to any planned or proposed development that likely will occur within the ten year projection timeframe. The planned residential development information and phasing estimates is a snapshot of the District at the time of this study. All of the information may change and should be updated annually.

Current plans point to 4,885 single-family homes, 252 multi-family attached and 922 apartment units to be constructed over the next 10 years. These units come from projects that are currently active or have a start date for construction that falls within the scope of the 10-yearear projections window. There are many other projects that are at various stages of the planning process that could possibly become active in the near future. However, due to the fact that no known start date exists for these projects, they are not included in the 10-year projection window as Davis Demographics refrains from basing its forecast on speculation. A total of 5,472 total units are currently expected to be completed over the next 10 years.

Manteca Unified School District

Planned Residential Development over the Next Ten Years (Fall 2022)

SECTION THREE – ATTENDANCE MATRIX

Two Attendance Matrices have been included to provide a better understanding of where students reside and where they attend school. **Remember, Davis Demographics projections are based upon where the students reside, not the students school of enrollment. This method allows Davis Demographics to provide the most accurate forecast of where shifts in student population may occur and changes to future facilities (if necessary) should be located**. Therefore, since the projections are based upon where the students reside, the figures we use as a base for each school's resident projection may be slightly higher or lower than the actual reported enrollment for each school. The best way to plan for future facilities is to know where the next group of students will be coming from, not necessarily which school they are currently attending.

Attendance matrices act as a check and balance for student accounting. Illustrating where the students reside (in what School of Residence) based upon their geocoded address and which school they attend (School of Attendance) based upon District provided student data. It is essential to show how the students used in the projections match up to the District's records of enrollment for each school. Furthermore, intra-district transferring patterns can be determined by comparing School of Residence data to the School of Attendance data.

READING THE MATRIX

Starting with the K-8 Elementary School Attendance Matrix, let's begin with August Knodt as an example. Following down the first column with the August Knodt heading, there are 606 K-8 grade students attending August Knodt and reside in the August Knodt attendance area. Continuing downward, 3 students attending August Knodt reside in the Brock Elliott attendance area. It then shows that 0 students attend August Knodt and reside in the French Camp attendance area, and so on.

The row "Out of District" refers to students living completely outside of the Manteca Unified School District but attending one of the District's schools. There are 6 Out of District students attending August Knodt. "Special Day Class" refers to special education students attending, there are 56 Special Day Class students attending August Knodt. The "Total Enrollment" is the total number of students attending a school regardless of where they reside and reflects the District's enrollment counts for each school. There are 727 students attending August Knodt.

The next step is to read across the matrix, beginning with the August Knodt attendance area row. We know 606 represents the total number of K-8 grade students residing and attending August Knodt. The next column, Brock Elliott, refers to the number of K-8 grade students residing in the August Knodt attendance area but attending Brock Elliott. There are 0 students residing in the August Knodt attendance area but attending Brock Elliott.

The "Count of K-8 Students Living in Attendance Area" column is the total number of students living in that particular attendance area. There are 658 K-8 students residing in the August Knodt attendance area.

SECTION FOUR – DISTRICT-WIDE STUDENT POPULATION PROJECTION

The student population is projected out ten years for each of the study areas, attendance areas, and for the Manteca Unified School District. The District Wide Summary enables the District to see a broad overview of future population shifts and what impact these shifts may have on existing and future facilities. Each attendance area is summarized to give a more local view of population changes and identify variances in the district. The study area listings enable the District to monitor student population growth or decline in neighborhood areas within the District.

Together, these projection summaries present the means for identifying the timing of future population shifts and overall facility adjustments needed to accommodate these shifts. At any time, study areas and their projected resident students can be shifted between schools to assist in balancing enrollment, school consolidation among various other analyses.

District Wide Projection Trends

The Manteca Unified School District is projected to continue to grow over the next ten years.
The tk-12 student population is projected to grow by 3,316 students by 2032. The elementary (grades tk-8) student population is expected to increase by 2,229 students over the next ten years. The high school (grades 9-12) student population could increase by 1,806 students by 2032. This projected growth is attributed to several key factors.

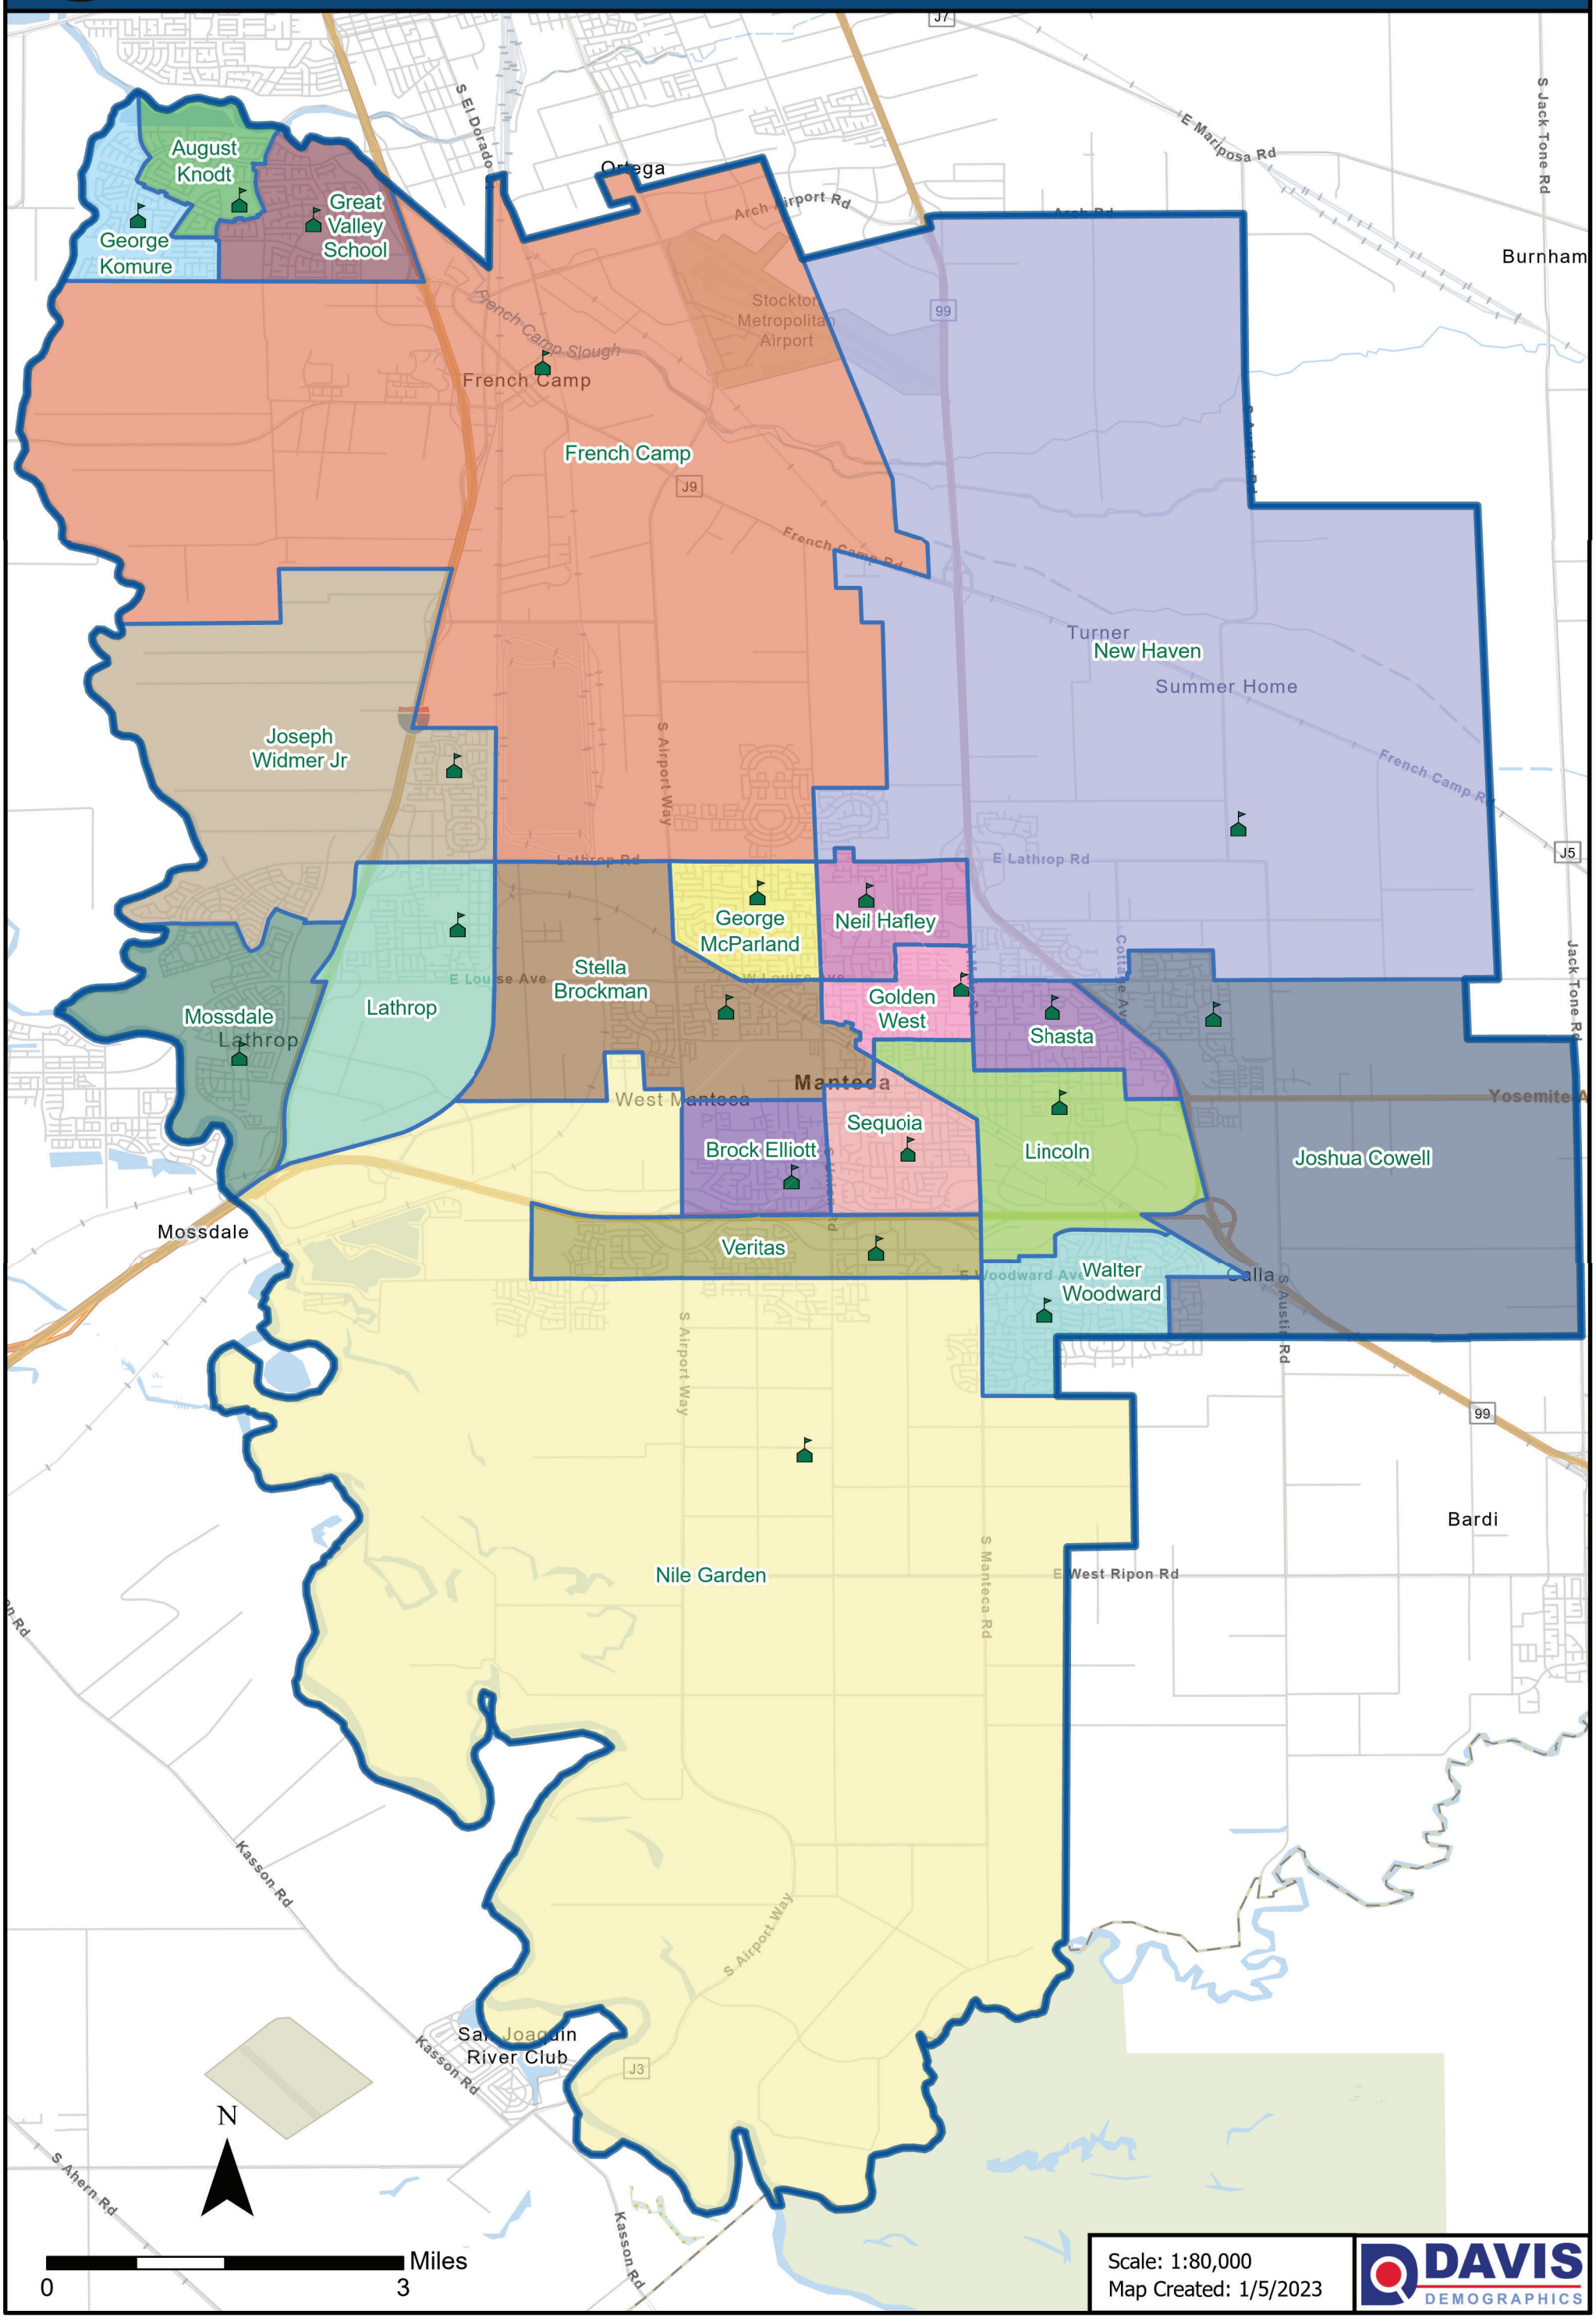

First and foremost is the residential units scheduled for construction over the next ten years. A total of 5,472 single-family units 252 multi-family attached and 922 apartments are expected to be built between now and 2032. Many more units are at different points of the planning process and even more projects can come online from land that is zoned for residential development but plans have yet to be submitted to city planners. Only projects with known start times are included in the 10-year projections. It is important to note that new home housing sales slowed down in the year 2022 due to mortgage interest rate hikes. This has caused a projected slowdown in incoming students when compared to fall 2021 forecasts. The new construction housing market will need to continue to be monitored to identify whether the slowdown trend with new housing will continue for the next couple of years. As a second factor for growth, the District has been successful in retaining its student population as students progress from one grade to the next within many neighborhoods. This metric is captured in the mobility calculation and shows that there is not a significant outflow of students out of the district's existing housing stock. In some cases, there is an in-migration pattern of school age student population moving into the school district's existing neighborhoods.

Capacity will become a growing concern to the district as development activity continues to generate new students. To this point, the district has had success in mitigating the impact of growth at the elementary level by overflowing students from impacted areas of the district to areas with excess capacity. It will be important for the district to continue discussions on how to relieve school capacity issues and redistribute the resident student population amongst different attendance areas. The district continues to address these concerns by adding extra capacity at the Lathrop and Nile Garden school sites and engaging in the attendance area boundary re-alignment process for its different schools. MUSD will have access to the GIS data that this study is based on. This data can be used to continue evaluating many of these possible scenarios and their potential impacts. District staff are acting upon and continue to consider all solutions in addressing the District's current and future capacity concerns.

It is important to understand that the projections in this report are based upon factors and development plans as they existed in Fall of 2022. These factors are all subject to changes in market conditions that fluctuate quickly. It is recommended that school districts revisit their projections on an annual basis to ensure that the latest trends are captured and applied to the population forecast.

Area Below School Capacity

Area Above School Capacity

Area Below 60% of School Capacity

Above projections are based on regular resident students. They do not include out of district, special day class, TK or PK Students.
Out of district, SDC, PK and TK students need to be added back into each attendance area forecast so that these students are accounted for in district wide facility needs analysis

K-8 Boundary Projection Trends

The overall elementary (grades k-8) student population is expected to increase by 1,709 students at the end of the projection period in 2032. The projected growth for the District will be mainly attributed to the residential development currently planned for the region. Areas that will see new units constructed in the coming years are expected to see the largest gains. By 2032, 13 of the District's 20 elementary attendance areas will see net gains in their resident student populations.

Declining Areas:

(George Komure, George McParland, Golden West, Great Valley, Joshua Cowell, Neil Hafley, Walter Woodward)

An overall decline in the resident k-8 student population is expected for a total of 7 of the elementary attendance areas in the district. The projected decline is partly attributed to the lower class sizes that currently exist in the lower elementary grades that are due to replace the larger high school-bound grades. Many of these attendance areas had lower incoming kindergarten classes in fall 2022 when compared to the previous 4 years which is helping forecast lower k-8 class sizes over the next 10 years.

Significant Growth Areas:

(August Knodt, Joseph Widmer, Lathrop, Mossdale, Nile Garden, Stella Brockman and Veritas ES)

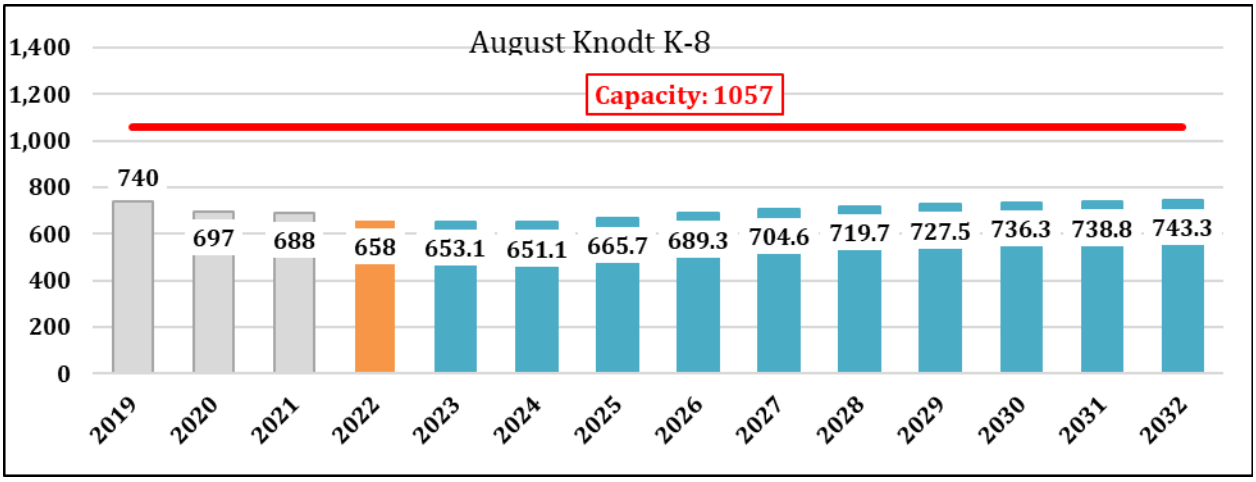

A total of 7 attendance areas are expected to experience net growth in the resident k-8 student population of over 10%. Much of the growth within these areas is mainly due to planned residential development that is scheduled for construction over the next 10 years. Some of these areas may not have a significant amount of planned residential development. However, mobility factors show that these areas have experienced a positive in-migration pattern as resident student class cohorts graduate on through the grades. These include areas such as the August Knodt ES and the Lathrop ES attendance boundaries. As homes are turned over to other families, these new families moving into the existing housing stock have elementary school-aged children.

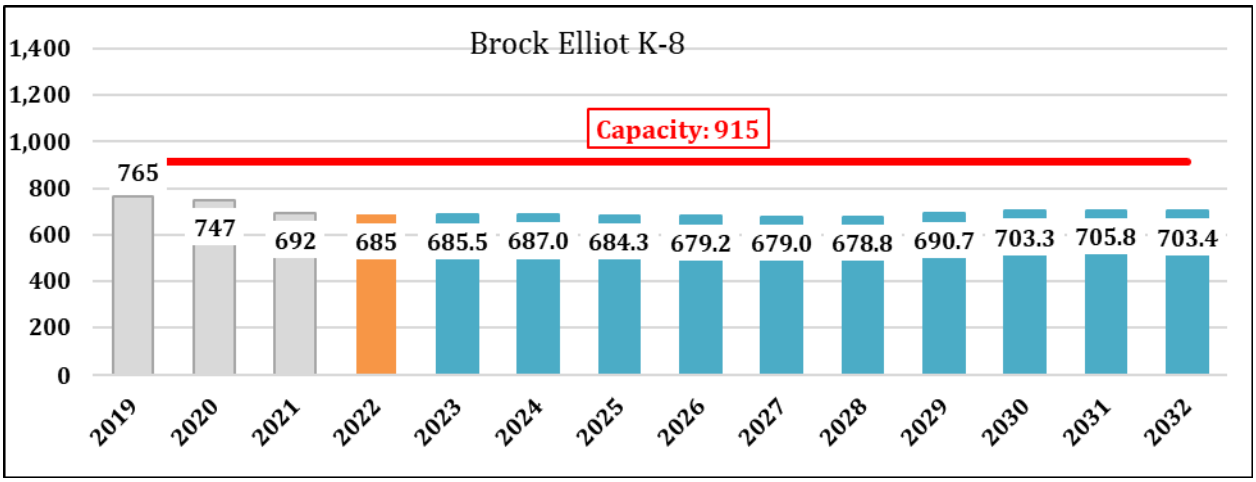

Capacity Concerns for Nile Garden:

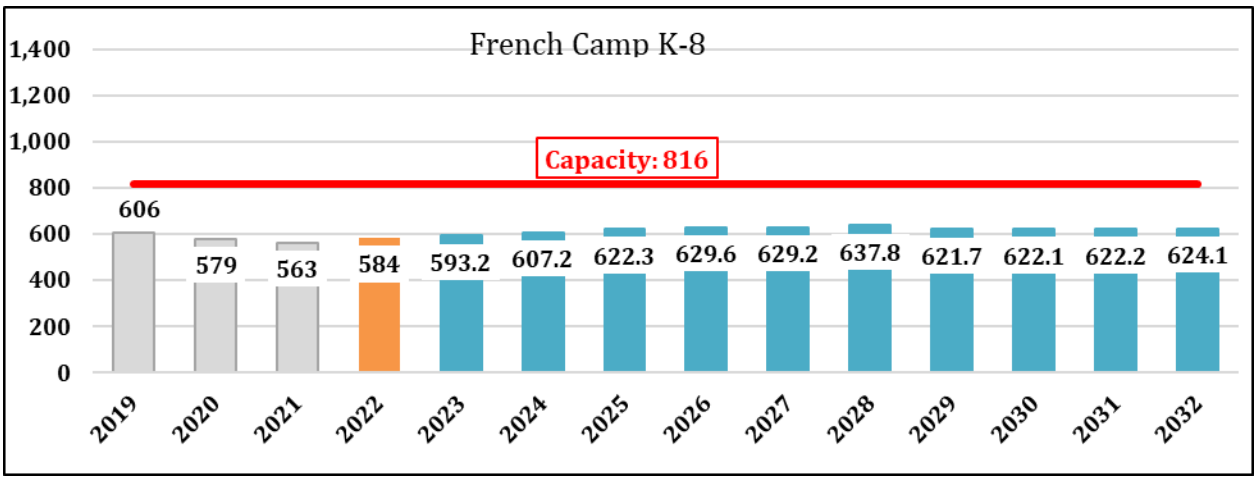

The Nile Garden attendance area is expected to experience growth and is also an area that will face capacity concerns as soon as the fall of 2024 (based on the District's Max program capacity figure at each school site). As of fall 2022, Nile Garden ES had 923 k-8 students living within its boundary. A total of 2,072 k-8 resident students are projected for this area by fall 2032.

School capacity relief will be necessary to accommodate the additional students projected for the District within the next ten years. The District has several options to choose from when considering adding capacity. Capacity can be added to the District by adding modular units, additional wings of classrooms, or a new facility. Attendance area redistricting is also a solution that may prove plausible in some instances to move excess capacity from one site to a site lacking it. The district currently has plans in place that will allow staff to consider each option and its respective viability. Facility expansion efforts have already begun. Nile Garden K-8 currently has 10 classrooms under construction.

Out of district and SDC students need to be added back into each attendance area forecast so that these students are accounted for in district wide facility needs analysis

High School Attendance Area Student Population Projection Trends

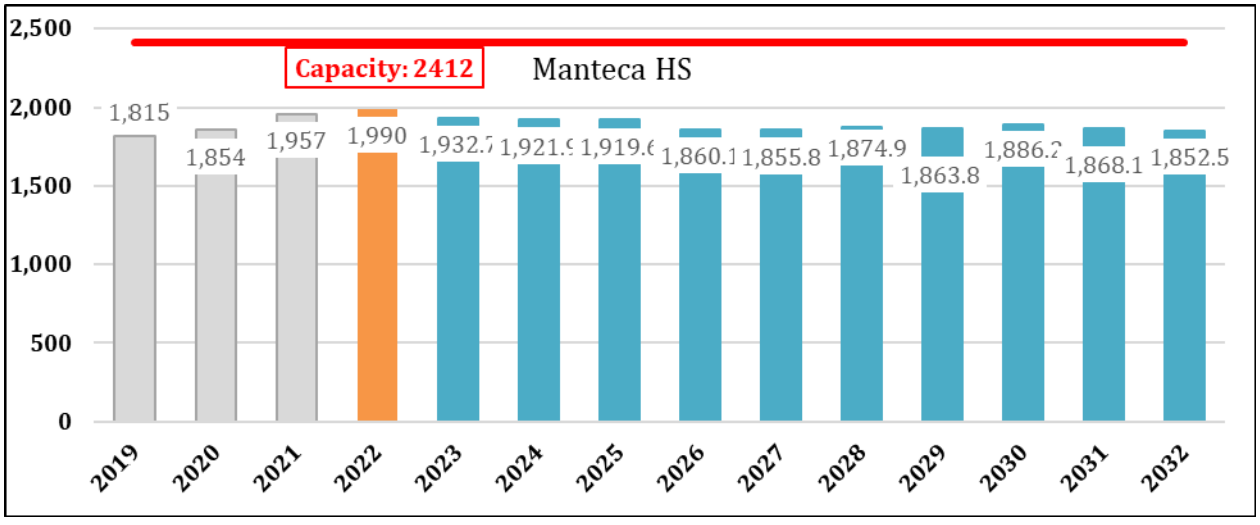

High school student enrollment is projected to see growth over the next 10 years. By 2032 the District can expect to see 9,168 students. This amounts to an increase of 1,086 students over the projection period. Over the next 10 years, Sierra High School is expected to have the largest net gain as it is projected to see an additional 1,315 resident students added to its resident student population by 2032. Lathrop High School's attendance area is expected to add 267 students by 2032. Manteca HS could experience a net decline of 137 grade 9-12 resident students through 2032. The Weston Ranch HS may see the largest losses in resident student population over the next 10 years (342 grade 9-12 students). East Union High School's resident student population is projected to remain stable with a slight projected decline of 16 students. The overall district-wide projected growth in the resident high school student population is mainly due to the significant amount of residential development that is scheduled for construction within the projected time frame.

Enough capacity exists to house the projected growth of the District's high school population. However, analysis of the capacity of individual high schools does reveal that capacity may be a concern for Sierra High School from fall 2028 to fall 2032. The campus has a capacity of 2,034 students based on the District's current program capacity figures. As of fall 2022, Sierra HS had a total resident student population of 1,450. Capacity could become an issue for Sierra HS by the fall of 2025 when a total resident student population of 2,157 is expected for this area.

Universal Transitional Kindergarten Forecast by Zip Code Explanation

The universal transitional kindergarten forecasts (tk) forecasts account for the state of California's recent AB130 universal tk implementation.

1. The total number of fall 2022 tk students living within the district boundary and each of the zip code boundaries was identified (The number in the orange row within columns B and D).

2. The birth rates in "Column A" were calculated by comparing births in 2018 to births in 2019-2021, representing incoming transitional kindergarten classes for fall 2023-2025. The average birthrate for fall 2023-2025 was used for fall 2026-2032 due to the lack of birth information for those years. These birth rates helped calculate the percent change in births between 2018 and 2019-2021 to help forecast the tk classes from fall 2023-2032. The birth rates were multiplied by the current year's tk student population to help forecast incoming tk students within each zip code boundary (Column B) for fall 2023-32. (The number in the orange row in "Column B" was multiplied by the percentages in "Column A.)"

3. Currently, only 4-year-olds that turn 5 from September 2nd to February 2nd are eligible for tk. Universal tk as a result of AB 130, came into effect in fall 2022.

   The state of California's minimum requirement is for an additional 2 months of eligibility for grade tk to be phased in each year from 2022 to 2024 and the remaining 3 months in 2025 until all 4-year-olds are eligible for the grade tk program.

4. "Column C" shows the estimated additional tk students that should be phased in based on the 2 and 3-month historical average tk enrollment (2019-2022) within each corresponding zip code.

5. The additional tk students within "Column C" were added accordingly to the forecasted tk enrollment for fall 2022 through fall 2031 (Columns B + C = Column D).

6. Please take a look at the green column (Column D) in the zip code table for the tk forecasts within each zip code.

7. Individual elementary attendance area tk forecast listings are shown following the tk- forecast by zip code. The tk-forecasts by elementary attendance area are derived from the tk forecast tables by zip code.

TK BIRTHS BY ZIP CODE

Birth Year	TK Year	Births: Zip Code 95231 & 95330	Birth Rate: % Change*	Column A: Traditional birth rate TK forecast	Column B: Estimated Additional Universal TK Eligible Students	Column C: Fall 2021 TK Class & Forecasted TK Classes	Column D: School Year
