New York State Law requires that all schools provide Scoliosis screening to all 9th grade boys.

Scoliosis is a sideward curvature of the spine. In its early years, it is painless and appears gradually, especially during the years of rapid teenage growth. It is often confused with poor posture.

The Scoliosis screening program consists of a two-minute observation made with a Scoliometer. This examination can be provided by your health care provider during the required physical exam and the information filled out on the school health examination form. The school nurse will screen students during their scheduled gym class starting in December, if the information has not been provided on the examination form.

If you have any questions, please call the high school health office at (631) 474-2481.

Warm Regards,

Kimberlee Gelibter, RN
