

The 8 Maroon Team provided a cross curricular project which included Science, Language Arts (Writing Skills) and Research. Students had a famous scientist who they had to perform research about and then presented it in a unique way by creating "Wanted Posters" which provided details about that person. It was a more creative way of completing the research project and allowed students to use their own individual design. Here are a few of Mrs. Solt's Science students with their work proudly displayed. We are extremely proud of all of the great things our staff and students are accomplishing!
