

2023-24 AP Environmental Science Summer Assignment

Welcome to APES! AP Environmental Science is an academic course designed to examine ecological, biological, chemical, physical, and geological concepts and interactions amongst them and the human world. A student in this course should be familiar with local, regional, and global concerns within his own environment. The objective of this summer assignment is to get you thinking environmentally, and give you a head start on our first unit. Please note that parts of the assignment will be collected for a grade. Unit 1 will be tested over the first week of school. All materials will be turned in to Google Classroom.

APES is perhaps the most relevant class one can take in high school, and completion of the summer assignment will do three very important things for you:

1. Make the class during the year EASIER for you,
2. Make the class MORE ENJOYABLE and more INTERESTING to you,
3. IMPROVE YOUR SCORE ON THE AP EXAM in May, 2024.

Engagement in this assignment will not only introduce you to many concepts we will be diving into, but it will give you a hands-on experience in ways you can take an active role in environmental issues today.

Please join the APES Google Classroom for access to your summer website where you will find resources, your assignments, and more. @ 37mhf4y
