

F1S Learning Platform

We appreciate all the hard work, growth, and expansion our teachers and students have put into the Florence 1 Schools Imagine Forward One to One. It is encouraging to see our students flourishing, collaborating, and innovating.

Please only utilize learning platforms that are approved initiatives or are in partnership with Florence 1 Schools. This enables F1S the ability to provide training, support, and safety with these approved partnerships.

For example, Florence 1 Schools has partnered with Google for its learning platform. Google Classroom is meant to give the teachers and students freedom to achieve their learning goals through the use of technological resources and tools. A standardized learning platform improves teacher, student and family communication.

Google Classroom is a free web service developed by Google for schools to simplify creating, distributing and grading assignments digitally. By using Google Classroom the distribution of class content, materials and homework is standardized.

The use of Google Classroom by all our teachers throughout the district ensures that our students and their families have the ability to access all their school work in one location instead of having to use multiple platforms. Students and teachers are covered with the latest F1S security filtering and monitoring tools when utilizing Google Classroom.

Ultimately, the spirit of this directive is to ensure that students, teachers, parents or guardians have the most efficient, safe, streamlined and effective tools with which to monitor, assess and manage the learning process.
