

Don't Wait—Vaccinate!

Missed immunizations put us all at risk.

- Postponing routine vaccinations puts millions of children at risk for infection with preventable deadly diseases.
- When social distancing begins to ease, infants and children who are not protected by vaccines may be more vulnerable to diseases like measles and whooping cough.

Flu shots are more important than ever.

- Influenza and COVID-19 share many symptoms. Preventing influenza means fewer people will need to take time off work, seek medical care and get tested for possible COVID-19 or influenza.

Your safety is a top priority!

- Your doctor has additional safety measures in place to protect your family when visiting the clinic, such as separating sick and well-child visits. Some clinics offer curbside clinics, where you can get care without leaving your car.

Schedule an appointment now!

- Make a vaccine appointment today to keep you and your family protected during and after the pandemic.
- Call your doctor or visit vaccinefinder.org to find a clinic near you.

California Data Show Dangerous Drop in Vaccination

- While staying at home during the COVID-19 outbreak has helped to slow the spread of the virus, it also has resulted in delays and decreases in the number of children getting their recommended vaccines.
- Data from the California Immunization Registry (CAIR*) show troubling decreases in administration of childhood vaccines during the COVID-19 pandemic, suggesting that many children may be vulnerable to serious disease.

Big Immunization Gap

MMR Doses Recorded in CAIR in 2020 vs. 2019, Children Age 4-6 Years

*Doses in CAIR are from a subset of clinics in 49 of 58 counties in California. Numbers as of 8/31/2020, subject to change as providers submit data.
