Career Integrated Academics

Career Integrated Academics

Linking High School to the Future!

- Today's global economy demands that all students graduate from high school prepared for post-secondary education and career opportunities.
- Mt. Diablo Unified School District strives to provide high school students with rigorous and relevant educational experiences through a number of opportunities.

Career Integrated Academics prepare students for careers and college based on their unique interests and abilities and to make sure what is learned each day in school is useful and relevant to their lives and their futures. Students experience hands-on learning opportunities in exciting and relevant professional pathways that reflect industry driven curriculum designed for the jobs of the future, giving students a better idea of what's out there in the world and the tools to be successful. MDUSD High Schools provide such educational experiences through career academies, career pathways, and career technical education courses, including courses provided by ROP.
