

HAZARD & VULNERABILITY CONSIDERATIONS

In January of 2019, School Safety Operations, prepared Hazard & Vulnerability Assessments for 36 HUSD sites. The Assessments include recommendations to improve safety and mitigate any potential hazards or vulnerabilities. The assessments are specific to each site, and typically include:

- Main entrance and other access points to the schools and sites
- School, safety and wayfinding signage
- Line of sight
- Exterior lighting
- Pick-up/drop-off and parking
- Visitor management
- Surveillance cameras
- Access control, lock-down, buzzer system
- Public address system
- Fire alarms and emergency response
- Site fencing
- Evacuation routes
- Airport flight paths
- Other Crime Prevention Through Environmental Design (CPTED) recommendations

DCA reviewed the Hazard & Vulnerability Reports for all the sites included in the FMP Update. The site-specific recommendations and appropriate budgets have been included in the FMP Update. Operational recommendations were not addressed in the FMP Update.

Copies of the Hazard & Vulnerability Assessments are available in the Appendix.
