Ransomware

Ransomware is harmful software that prevents employees from accessing an organization's computers until a ransom is paid to criminals. If infected, ransomware can immediately shut down all business operations by rendering all computers useless.

WHAT CAN YOU DO TO PROTECT WSD???

- Never click on suspicious links or email attachments in unknown or unwanted emails without verification.

- Browse only trusted websites.

- Watch for suspicious activity on your accounts.

- Reach out to the IT department if an email looks suspicious.
