

Calculus Summer Math Packet

Congratulations! You made it to Calculus!

This summer math packet is a review of concepts learned in Algebra and Pre-Calculus classes that are needed when you begin your Calculus course in August. Completion of the packet will assure that all students begin the school year on the same page and with equal opportunity to learn and build upon mathematical concepts that should have been learned in previous courses.

Instructions for completing the packet:

- Please print the packet or use loose leaf paper to complete the packet by hand showing all work. Work must be neat and legible.
- Please use your Pre-Calculus notes or the websites provided to help you if you need reminders on how to complete some practice problems.
- Take notes as you complete your work. You will be given a quiz on this material the first week of school.
- Work on the packet with your friends. Help each other. Every student is responsible for knowing the material in this packet when you return in August. We will review as a team and everyone will be expected to participate.
- Bring your packet to our first class together. It will be collected for a grade. Only packets done with paper and pencil will be accepted.

A FRIENDLY SABRE SUGGESTION -

begin your summer with a SCHEDULE for completing your packet.

Error	Correct form	Comments
$a - (x - b) \neq a - x - b$	a-(x-b)=a-x+b	Change all signs when distribution negative through parentheses.
$(a+b)^2 \neq a^2 + b^2$	$(a + b)^2 = a^2 + 2ab + b^2$	Don't forget middle term when squaring binomials.
$\left(\frac{1}{2}a\right)\left(\frac{1}{2}b\right) \neq \frac{1}{2}ab$	$\left(\frac{1}{2}a\right)\left(\frac{1}{2}b\right) = \frac{1}{4}(ab)$	1/2 occurs twice as a factor.
$\frac{a}{x+b} \neq \frac{a}{x} + \frac{a}{b}$	Leave as $\frac{a}{x+b}$	Don't add denominators when adding fractions.
$\frac{1}{a} + \frac{1}{b} \neq \frac{1}{a+b}$	$\frac{1}{a} + \frac{1}{b} = \frac{a+b}{ab}$	Use definition for adding fractions.
$\frac{\frac{x}{a}}{b} \neq \frac{bx}{a}$	$\frac{\frac{x}{a}}{b} = \left(\frac{x}{a}\right)\left(\frac{1}{b}\right) = \frac{x}{ab}$	Multiply by reciprocal of the denominator.

$1/x + 2 \neq \frac{1}{x+2}$	$1/x + 2 = \frac{1}{x} + 2$	Be careful when using a slash to denote division.
$(x^2)^3 \neq x^5$	$(x^2)^3 = x^{2 \cdot 3} = x^6$	Multiply exponents when an exponential form is raised to a power.
$2x^3 \neq (2x)^3$	$2x^3 = 2(x^3)$	Exponents have priority over coefficients.
