

## **COMPUTER/DATA SECURITY**

The district network and computing systems are intended to support the educational goals and purpose of the district and to benefit all members of the school community. Unauthorized access to the system or any action that destroys the data of others or interferes with their usage of the system will be considered an act of vandalism and result in disciplinary action according to district policy. Individuals who abuse the systems may also lose their computer privileges and/or be held financially liable for necessary repairs, replacement or restoration of data or equipment.

The district will support the security of its network and computing systems by adopting appropriate safety procedures, by developing rules and regulations to help ensure that these resources are used in accordance with acceptable guidelines, and by informing users of expected standards of conduct and the consequences for not following them.
