

Request for Proposal Addendum
Jefferson School District 14J
ERate 2022-2023

Network Refresh

Due: December 15, 2022

Superintendent: Brad Capner

Questions and Answers

1) Does the switch at the High School in the AG Barn need to be a 48 port switch?

It does not. I could get away with 24 port. We would like to add some cameras, AP's and ethernet out in that area.

2) Does the switch at the District Office in the Football Stadium need to be a 48 port switch? It does not.

I could get away with 24 port. We would like to add some cameras, AP's and ethernet out in that area.

3) Does the switch at District Admin in the Maintenance need to be a 48 port switch?

It could be a 24 port switch as well.

4) Do the switches need to support smart rate ports and class 6 PoE for future proofing the wireless network?

Yes please

5) Does the district want to manage the switches locally with console/SSH access or through a cloud management platform?

I am ok with either. I have enjoyed the Extreme Campus Controller for managing my network which has a nice gui interface. I want something that makes management easy currently have to CLI on all my switches individually so looking to move towards something that allows me to manage all my switches in one place. Local vs Cloud is less important than overall functionality

6) Would the district like to have a redundant pair of L3 switches at the District Office rather than a single switch?

We are ok with a single switch.
