

Safety & Security

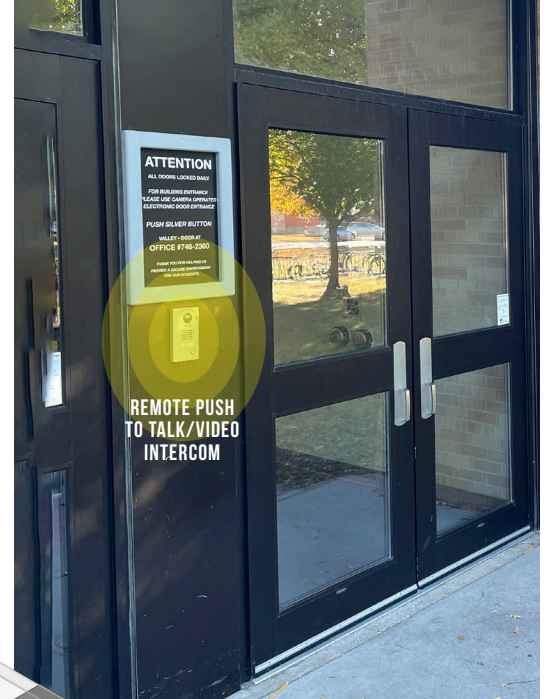

District schools need ongoing security updates and safety training. The safety of students, staff, and their families is a high priority for the district.

Secure Entrances: Physical secure entrances would be constructed to allow office staff to control building access. Visitors would enter a secure vestibule and then be granted access to the school itself. Construction of physical secure entrances would be made possible by relocating central offices.

Additional Safety Measures: Safety and security measures need continual updates to ensure the safety of students, staff, and visitors at all times.

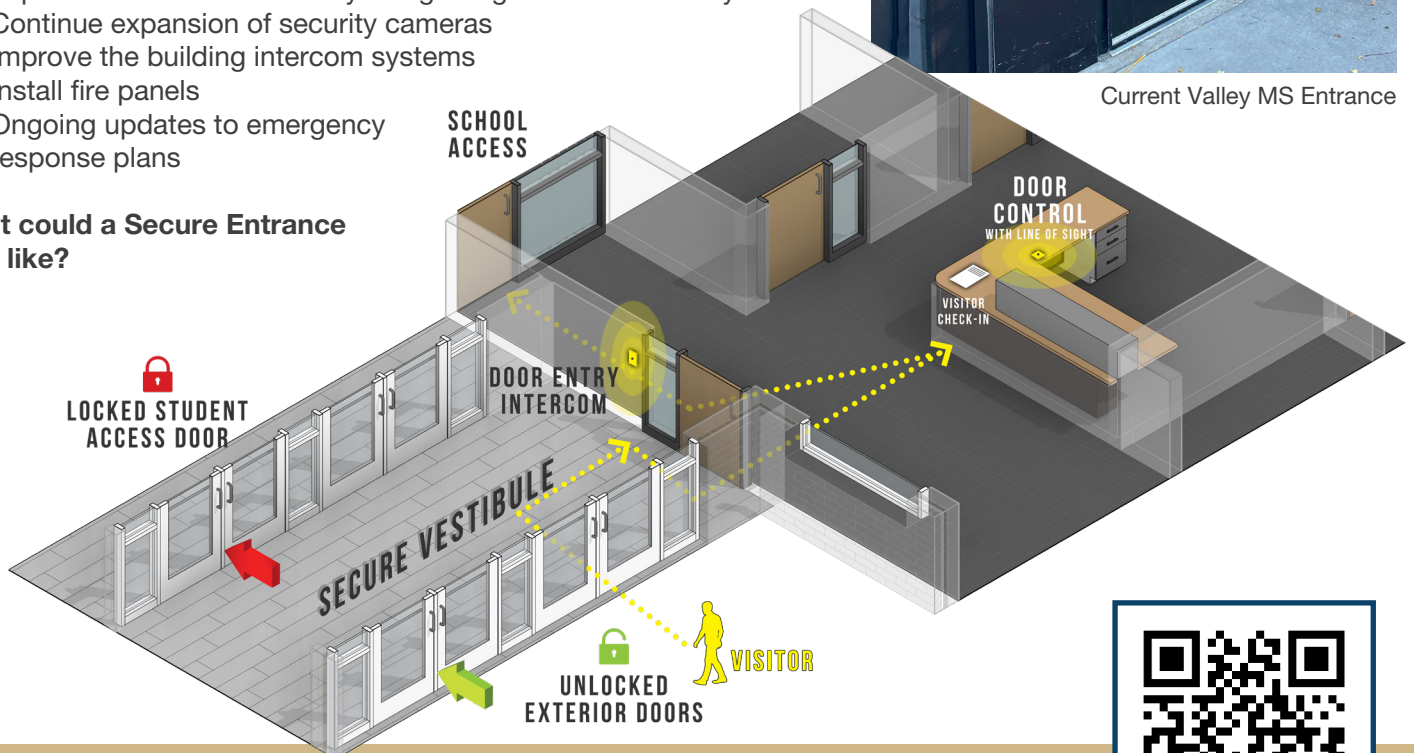

While each school has individual needs, the following is a list that encompasses the security measures needed by our District schools:

- Constructing physical secure entrances
- Relocating central offices to achieve a physical secure entrance
- Update push-to-talk door intercom systems
- Improve door access security using assigned electronic keys
- Continue expansion of security cameras
- Improve the building intercom systems
- Install fire panels
- Ongoing updates to emergency response plans

Current Valley MS Entrance

What could a Secure Entrance look like?
