## Appendix D

### Why Do Rivers Bend?

1. In the picture above, what started to cause one side of the river to wash away?

---

---

---

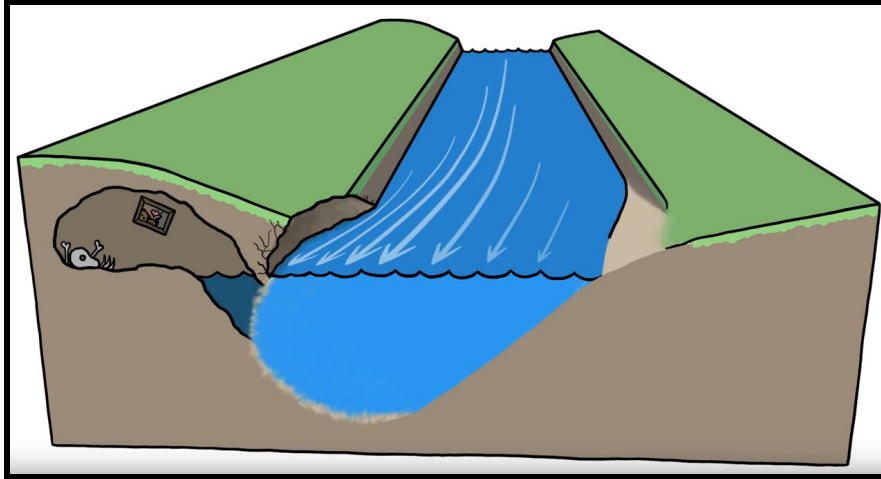

---

---

---

2. What will happen next to the side of the river that is being washed away? (Circle one.)

- a. The river will continue to wash it away over time.
- b. The river will fill in the hole with new material.
- c. The river will dry up because it has become too wide.

3. In the image above, why do you think the animal turned into a skeleton as the river began to change? (Circle one.)

- a. because rivers are dangerous when they bend
- b. because rivers take a very, very long time to change
- c. because animals usually starve when building a home near a river

4. In the image above, why are there arrows of different sizes in the water? (Circle one.)

- a. to show that the water is not flowing
- b. to show that the water is flowing at different speeds
- c. to show that the water is flowing in different directions
