

Proposed Perimeter Safety Upgrades

The Challenge

- Middle School athletic events take place during instructional time when students and staff are still on campus. This produces some safety risks for the school community.
- Visiting teams, coaches, and parents require access to the gym and the field areas on an inconsistent and changing schedule during instruction for all intents and purposes exposing the rest of the campus to the public on those days.

Proposed Solution

- A new fence with egress gates along the West side of the gym
- A path of travel (stairway) connecting the field to the area between the gym and the community center allowing foot traffic between those two areas while keeping rest of campus behind a physical barrier.

Estimated Cost

- Fencing and gates \$25,000
- Concrete stairway connecting field ramp to rear of the gym \$15,000
- **Total ~\$40,000**
