School Registration Requirements

1. Birth Verification (one required)
   - Certified Birth Certificate
   - Baptismal Certificate
   - Passport
   - Other

2. Complete Immunization Record – Including TB Test (PPD) requirements

3. Proof of Residency

This worksheet will assist you in the residence verification process. Please bring the original and a copy of one item from Box One and the originals and copies of two items from Box 2 to your attendance area school. If you do not have access to a copy machine, we will make copies for you. The originals will be returned the same day and copies will be turned in with your student registration packet.

Please direct any questions to the school secretary at your attendance area school.

Proof of residency from each category listed below: (total of 3 current forms required)

<table>
<thead>
<tr>
<th>Category 1 (One form required)</th>
</tr>
</thead>
<tbody>
<tr>
<td>☐ Mortgage Statement</td>
</tr>
<tr>
<td>☐ Property Tax Statement</td>
</tr>
<tr>
<td>☐ Escrow Papers</td>
</tr>
<tr>
<td>☐ Rental Agreement</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Category 2 (Two forms required)</th>
</tr>
</thead>
<tbody>

TB TEST (Kindergarten entrants and transferring students from outside Santa Clara County into grades one through twelve must present a TB Risk Assessment for School Entry form completed by their health care provider. This must be completed within twelve months prior to first school registration or transfer. Students who have left the county for 12 months or more need a new TB Risk Assessment for School Entry form completed with in the last 12 months.) The Santa Clara County Public Health Department TB Risk Assessment for school entry is the only acceptable risk assessment form.

Copy of all Immunizations

**YOU NEED TO DO ONE OF THE FOLLOWING IMMEDIATELY:**

Take this form to your doctor or the local health department to get needed immunization(s). Then bring us your child’s updated immunization record and/or TB Risk Assessment for School Entry form completed by your healthcare provider. Your child’s record must include a date for the immunizations and the doctor’s signature or stamp.

According to state law, we cannot allow your child to attend school/child care unless we receive evidence that the above requirements are met.

If you have any questions or require additional information please call the school nurse’s office:

Sincerely,

Health Services

Rev. 01/2020
CALIFORNIA IMMUNIZATION REQUIREMENTS FOR K – 12TH GRADE

<table>
<thead>
<tr>
<th>GRADE</th>
<th>NUMBER OF DOSES REQUIRED OF EACH IMMUNIZATION</th>
</tr>
</thead>
<tbody>
<tr>
<td>K-12 Admission (7th-12th)</td>
<td>4 Polio⁴, 5 DTaP⁵, 3 Hep B⁶, 2 MMR⁷, 2 Varicella</td>
</tr>
<tr>
<td>K-12 doses</td>
<td>+ 1 Tdap</td>
</tr>
<tr>
<td>7th Grade Advancement⁸ ¹⁰</td>
<td>1 Tdap⁸</td>
</tr>
<tr>
<td></td>
<td>2 Varicella¹⁰</td>
</tr>
</tbody>
</table>

1. Requirements for K-12 admission also apply to transfer pupils.
2. Combination vaccines (e.g., MMRV) meet the requirements for individual component vaccines. Doses of DTP count towards the DTaP requirement.
3. Any vaccine administered four or fewer days prior to the minimum required age is valid.
4. Three doses of polio vaccine meet the requirement if one dose was given on or after the 4th birthday.
5. Four doses of DTaP meet the requirement if at least one dose was given on or after the 4th birthday. Three doses meet the requirement if at least one dose of Tdap, DTaP, or DTP vaccine was given on or after the 7th birthday (also meets the 7th-12th grade Tdap requirement. See fn. 8.)
6. For 7th grade admission, refer to Health and Safety Code section 120335, subdivision (c).
7. Two doses of measles, two doses of mumps, and one dose of rubella vaccine meet the requirement, separately or combined. Only doses administered on or after the 1st birthday meet the requirement.
8. For 7th-12th graders, at least one dose of pertussis-containing vaccine is required on or after the 7th birthday.
9. For children in ungraded schools, pupils 12 years and older are subject to the 7th grade advancement requirements.
10. The varicella requirement for seventh grade advancement expires after June 30, 2025.

DTaP/Tdap = diphtheria toxoid, tetanus toxoid, and acellular pertussis vaccine
Hep B = hepatitis B vaccine
MMR = measles, mumps, and rubella vaccine
Varicella = chickenpox vaccine

INSTRUCTIONS:
California schools are required to check immunization records for all new student admissions at TK/Kindergarten through 12th grade and all students advancing to 7th grade before entry. Students entering 7th grade who had a personal beliefs exemption on file must meet the requirements for TK/K-12 and 7th grade. See shotsforschool.org for more information.

UNCONDITIONALLY ADMIT a pupil whose parent or guardian has provided documentation of any of the following for each immunization required for the pupil’s age or grade as defined in table above:
- Receipt of immunization.
- A permanent medical exemption.*
- A personal beliefs exemption (filed in CA prior to 2016); this is valid until enrollment in the next grade span, typically at TK/K or 7th grade.*

CONDITIONALLY ADMIT any pupil who lacks documentation for unconditional admission if the pupil has:
- Commenced receiving doses of all the vaccines required for the pupil’s grade (table above) and is not currently due for any doses at the time of admission (as determined by intervals listed in Conditional Admission Schedule, column entitled “EXCLUDE IF NOT GIVEN BY”), or
- A temporary medical exemption from some or all required immunizations.*
CONDITIONAL ADMISSION SCHEDULE FOR GRADES K-12

Before admission a child must obtain the first dose of each required vaccine and any subsequent doses that are due because the period of time allowed before exclusion has elapsed.

<table>
<thead>
<tr>
<th>DOSE</th>
<th>EARLIEST DOSE MAY BE GIVEN</th>
<th>EXCLUDE IF NOT GIVEN BY</th>
</tr>
</thead>
<tbody>
<tr>
<td>Polio #2</td>
<td>4 weeks after 1st dose</td>

<td>4 months after 1st dose</td>
</tr>
<tr>
<td></td>
<td>Age 13 years and older: 4 weeks after 1st dose</td>
<td>8 weeks after 1st dose</td>
</tr>
</tbody>
</table>

1. Three doses of polio vaccine meet the requirement if one dose was given on or after the fourth birthday. If polio #3 is the final required dose, polio #3 should be given at least six months after polio #2.

2. If DTaP #3 is the final required dose, DTaP #3 should be given at least six months after DTaP #2, and pupils should be excluded if not given by 12 months after second dose. Three doses meet the requirement if at least one dose of Tdap, DTaP, or DTP vaccine was given on or after the seventh birthday. One or two doses of Td vaccine given on or after the seventh birthday count towards the requirement.

Continued attendance after conditional admission is contingent upon documentation of receipt of the remaining required immunizations. The school shall:

- review records of any pupil admitted conditionally to a school at least every 30 days from the date of admission,
- inform the parent or guardian of the remaining required vaccine doses until all required immunizations are received or an exemption is filed, and
- update the immunization information in the pupil's record.

For a pupil transferring from another school in the United States whose immunization record has not been received by the new school at the time of admission, the school may admit the child for up to 30 school days. If the immunization record has not been received at the end of this period, the school shall exclude the pupil until the parent or guardian provides documentation of compliance with the requirements.

* In accordance with 17 CCR sections 6050-6051 and Health and Safety Code sections 120370-120372.
† In accordance with Health and Safety Code section 120335.
Tuberculosis (TB) and Latent TB Infection FACT SHEET

What is TB?

Tuberculosis (TB) is a disease caused by a bacteria that is spread through the air from person to person. Although TB most often affects the lungs, it can affect any part of the body including lymph nodes, bones, kidneys, and the brain. TB can cause very severe illness and it can be fatal. Fortunately, TB can be prevented, treated, and cured!

How Do You Get TB Infection?

The bacteria that causes TB is spread through the air from person to person when an individual with TB disease of the lungs or throat coughs, sneezes, or speaks. When people nearby breathe in the bacteria they may become infected, particularly if they are in close or prolonged contact. When someone has been infected, but they do not yet have symptoms or evidence of TB disease, this is called latent tuberculosis infection (LTBI).

What Are the Symptoms of TB?

Symptoms of TB can include fever, weight loss, night sweats, and fatigue. When TB affects the lungs, symptoms can also include a cough that lasts more than 2-3 weeks, coughing up blood, and chest pain. If you have any of these symptoms you need to see a doctor!

What is the Difference Between Latent TB Infection (LTBI) and TB Disease?

When someone has been infected with the bacteria that causes TB, as long as their body is able to prevent the bacteria from growing, they will have no symptoms or evidence of TB disease. This is called latent tuberculosis infection (LTBI), which is not contagious to other people.

When your body can no longer prevent the bacteria from growing, the bacteria multiply and cause you to become sick with TB disease. People with LTBI may develop TB disease within weeks to many years after becoming infected. People with TB disease are usually sick and may be able to spread the bacteria to others if TB affects their lungs or throat. The risk of developing TB disease is highest among persons with weakened immune systems.

Is TB a problem in Santa Clara County (SCC)?

Yes. SCC has the fourth highest number of TB cases among all counties in California, after Los Angeles, San Diego, and Orange counties. The rate of TB in SCC is over 3 times as high as the national rate. It is estimated that 8.5% of SCC residents have latent TB infection, though most do not know they are infected.

Who Does TB Affect in Santa Clara County?

TB can infect anyone who lives, works, or breathes in close proximity to someone with infectious TB disease, regardless of their age, race, sex, or socioeconomic status. Over 90% of patients with TB disease in SCC were born outside of the U.S., though most have lived in the U.S. for more than 5 years. In SCC, the majority of cases occur among people born in Vietnam, the Philippines, India, and China.
You Should Get Tested for Latent TB Infection (LTBI) if You...

- Were in close or prolonged contact with someone with TB of the lungs or throat.
- Were born in a country with an elevated TB rate (i.e. countries other than the U.S., Canada, Australia, New Zealand, or Western and Northern European countries).
- Have a condition that is associated with a higher risk of TB including HIV; diabetes; end stage renal disease; head, neck, or lung cancer; leukemia; lymphoma; silicosis; have a history of gastrectomy or jejunoleal bypass; or are significantly underweight.
- Take drugs that weaken your immune system (e.g. chemotherapy, anti-rejection drugs after organ transplant, TNF-alpha inhibitors, oral steroids equal to 15 mg of prednisone or more for at least one month).
- Have injected illegal drugs.
- Smoke.
- Have worked or stayed in a homeless shelter, correctional facility (e.g. prison or jail) or other group setting.

What if I’ve Had the BCG vaccine?

A positive TB skin test should never be ignored. BCG vaccines (TB vaccines) are given in countries where TB is common. BCG vaccines may help protect young children from getting very sick with TB. However, this protection goes away as people get older. People who have had a BCG vaccine can still get latent TB infection and TB disease.

If you had the BCG vaccine, you can be tested with either a TB blood test or a TB skin test. If you have a choice, a TB blood test is best because the TB blood test is not affected by BCG vaccines. This means that your TB blood test will be “positive” only if you have TB bacteria in your body.

What is the Treatment for Latent TB Infection (LTBI)?

LTBI can be treated with medicine to prevent developing TB disease. Treatment options include:
- Isoniazid and Rifapentine once weekly for 12 weeks
- Rifampin daily for 4 months
- Isoniazid daily for 9 months

Ask your doctor which treatment is best for you.

Why Should I Take Medicine if I Don’t Feel Sick?

If you have latent TB infection (LTBI), this means that you have TB bacteria living in your body, even though you are not sick. You may develop TB disease if you do not take medicine to treat LTBI. Treatment can decrease the risk of developing TB disease by over 90% when medications are taken as prescribed. It is important that you finish your medicine so that the treatment is effective and so that you do not develop drug resistance. For more information on TB, visit www.sccphd.org/tbinfo or contact Santa Clara County Public Health Department.

How Can I Tell if I Have Latent TB Infection (LTBI)?

A TB blood test (e.g. Quantiferon or T-spot) or TB skin test (TST or PPD) can be performed to find out if you have TB bacteria in your body.

A “positive” test result means you probably have TB bacteria in your body. Most people with a positive TB blood test or TB skin test have latent TB infection. To be sure that you do not have TB disease, your doctor will examine you and perform a chest x-ray. You may also need other tests to see if you have latent TB infection or TB disease.
Santa Clara County Public Health Department  
Tuberculosis (TB) Risk Assessment for School Entry

This form must be completed by a licensed health professional in the U.S. and returned to the child's school.

1. Was your child born in, resided, or traveled (for more than one month) to a country with an elevated rate of TB**? □ Yes □ No

2. Has your child been in close contact to anyone with TB disease in their lifetime? □ Yes □ No

3. Is your child immunosuppressed; current, or planned? (e.g., due to HIV infection, organ transplant, treatment with TNF-alpha antagonist or high-dose systemic steroids (e.g., prednisone ≥ 15 mg/day for ≥ 2 weeks). □ Yes □ No

*Most countries other than the U.S., Canada, Australia, New Zealand, or a country in western or northern Europe. This does not include tourist travel for <1 month (i.e., travel that does not involve visiting family or friends, or involve significant contact with the local population).

If YES, to any of the above questions, the child has an increased risk of TB and should have a TB blood test or a tuberculin skin test (TST) unless there is either 1) a documented prior positive IGRA or TST or 2) no new risk factors since last documented negative IGRA (performed at age ≥2 years in US or TST performed at age ≥ 6 months in U.S.)

All children with a current or prior positive IGRA/TST result must have a medical evaluation, including a chest x-ray (CXR; posterior-anterior and lateral for children <5 years old is recommended). CXR is not required for children with documented prior treatment for TB disease, documented prior treatment for latent TB infection, or BCG-vaccinated children who have a positive TST and negative IGRA. If there are no symptoms or signs of TB disease and the CXR is normal, the child should be treated for latent TB infection (LTBI) to prevent progression to TB disease.

Enter test results for all children with a positive risk assessment:

Please check one of the boxes below and sign:

□ Child has no TB symptoms, no risk factors for TB, and does not require a TB test.
□ Child has a risk factor, has been evaluated for TB and is free of active TB disease.
□ Child has no new risk factors since last negative IGRA/TST and has no symptoms.
□ Child has no TB symptoms. Appointment for IGRA/TST scheduled on: ___________ ___________.

Health Care Provider Signature, Title Date

Name/Title of Health Provider: 
Facility/Address: 
Phone number:
Testing Methods
An Interferon Gamma Release Assay (IGRA, i.e., QuantiFERON or T-SPOT.TB) or Mantoux tuberculin skin test (TST) should be used to test those at increased risk. An IGRA can be used in all children ≥ 2 years old and is preferred in BCG-vaccinated children to avoid a false positive TST result. A TST of ≥10mm induration is considered positive. If a child has had contact with someone with active TB disease (yes to question 2 on reverse), or the child is immunosuppressed, then TST ≥5 mm is considered positive. If a BCG-vaccinated child has a positive TST, and an IGRA is subsequently performed and is negative, testing is considered negative unless the child was exposed to someone with TB disease or is immunosuppressed. For immunosuppressed children, screening should be performed by CXR in addition to a TST/IGRA (consider doing both) and symptom review. TB screening can be falsely negative within 8 weeks after exposure, so are best obtained 8 weeks after last exposure.

Evaluation of Children with Positive TB Tests
- All children with a positive IGRA/TST result must have a medical evaluation, including a CXR (posterior-anterior and lateral is recommended for children <5 years old). A CXR is not required for a positive TST with negative IGRA in a BCG-vaccinated child, or if the child has documentation of prior treatment for TB disease or treatment for latent TB infection.

- For children with TB symptoms (e.g., cough for >2-3 weeks, shortness of breath, hemoptysis, fever, weight loss, night sweats) or an abnormal CXR consistent with active TB disease, report to the County of Santa Clara Public Health Department TB Program within one day. The child will need to be evaluated for TB disease with sputum AFB smears/cultures and nucleic acid amplification testing. A negative TST or IGRA does not rule out active TB disease in a patient with symptoms or signs of TB disease. The child cannot enter school unless active TB disease has been excluded or treatment has been initiated.

- If there are no symptoms or signs of TB disease and the CXR is normal, the child should be treated for latent TB infection (LTBI). Do not treat for LTBI until active TB disease has been excluded.

- Short-course regimens are preferred (except in persons for whom there is a contraindication, such as a drug interaction or contact to a person with drug-resistant TB) due to similar efficacy and higher treatment completion rates as compared with 9 months of daily isoniazid.

Treatment Regimens for Latent TB Infection
- Rifampin 15 - 20 mg/kg (max. 600 mg) daily for 4 months
- 12-dose Weekly Isoniazid/Rifapentine (3HP) Regimen:
  - Isoniazid
    2-11 years old: 25 mg/kg rounded up to nearest 50 or 100 mg (max. 900 mg)
    ≥ 12 years old: 15 mg/kg rounded up to nearest 50 or 100 mg (max. 900 mg)
  - Rifapentine
    10.0-14.0 kg: 300 mg
    14.1-25.0 kg: 450 mg
    25.1-32.0 kg: 600 mg
    32.1-50.0 kg: 750 mg
    >50 kg: 900 mg
  - Vitamin B6 50 mg weekly
- Isoniazid 10 mg/kg (range, 10-15 mg/kg; max. 300 mg) daily for 9 months. Recommended pyridoxine dosage is 25 mg for school-aged children (or 1-2 mg/kg/day).
- Isoniazid and Rifampin daily for 3 months: Children: Isoniazid 10-20 mg/kg (300 mg maximum) Rifampin 15-20 mg/kg; (600 mg maximum)
California Department of Public Health
July 2022– Page 1 of 2

Oral Health Assessment Form

California law (*Education Code* Section 49452.8) says every child must have a dental check-up (assessment) by May 31st of his/her first year in public school. A California licensed dental professional must do the check-up and fill out Section 2 of this form. If your child had a dental check-up in the last 12 months, ask your dentist to fill out Section 2. If you are unable to get a dental check-up for your child, fill out the separate Waiver of Oral Health Assessment Requirement Form.

This assessment will let you know if there are any dental problems that need attention by a dentist. This assessment will also be used to evaluate our oral health programs. Children need good oral health to speak with confidence, express themselves, be healthy and, ready to learn. Poor oral health has been related to lower school performance, poor social relationships, and less success later in life. For this reason, we thank you for making this contribution to the health and well-being of California’s children.

Section 2: Oral Health Data Collection (Filled out by a California licensed dental professional)

**IMPORTANT NOTE:** Consider each box separately. Mark each box.

<table>
<thead>
<tr>
<th>Assessment Date:</th>
<th>Untreated Decay (Visible Decay Present)</th>
<th>*Caries Experience (Visible decay and/or fillings present)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>☐ Yes ☐ No</td>
<td>☐ Yes ☐ No</td>
</tr>
</tbody>
</table>

Treatment Urgency:

☐ No obvious problem found

☐ Early dental care recommended (caries without pain or infection; or child would benefit from sealants or further evaluation)

☐ Urgent care needed (pain, infection, swelling or soft tissue lesions)

---

**Licensed Dental Professional Signature**

**CA License Number**

**Date**

*Check “Yes” for Caries experience if there is presence of untreated decay or fillings
Check “No” for Caries experience if there is no untreated decay and no fillings

Section 3: Follow-up to Urgent Care (Filled out by entity responsible for follow up)

Parent notified that child has urgent dental care need on: __ __

A follow-up appointment for this child has been scheduled for: __ __

Did child receive needed treatment? ☐ Yes

☐ No (If no, entity responsible for follow-up will be encouraged to check back in with parent)

☐ I don’t know

The law states schools must keep student health information private. Your child's name will not be part of any report as a result of this law. This information may only be used for purposes related to your child's health. If you have questions, please call your school.

Return this form to the school no later than May 31st of your child's first school year.

*Original to be kept in child’s school record.*
Waiver of Oral Health Assessment Requirement

Please fill out this form if you need to excuse your child the oral health assessment requirement. Sign and return this form to the school where it will be kept confidential.

Section 2: To be filled out by parent or guardian ONLY IF asking to be excused from this requirement

Please excuse my child from the assessment because (check the box that best describes the reason):

- [ ] I cannot find a dental office that will take my child’s dental insurance plan. My child’s dental insurance plan is:
  - [ ] Medi-Cal
  - [ ] Covered California
  - [ ] Healthy Kids
  - [ ] None
  - [ ] Other: __________________________________________

- [ ] I cannot afford an assessment for my child.

- [ ] I cannot find the time to get to a dentist (e.g., cannot get the time off from work, the dentist does not have convenient office hours).

- [ ] I cannot get to a dentist easily (e.g., do not have transportation, located too far away).

- [ ] I do not believe my child would benefit from an assessment.

- [ ] Other (please specify the reason not listed above for why you are seeking a waiver of this assessment for your child):
  - __________________________________________
  - __________________________________________

If asking to be excused from this requirement:

[ ] Signature of parent or guardian

[ ] Date

The law states schools must keep student health information private. Your child’s name will not be part of any report as a result of this law. This information may only be used for purposes related to your child’s health. If you have questions, please call your school.

Return this form to the school no later than May 31 of your child’s first school year.

*Original to be kept in child’s school record.*
# REPORT OF HEALTH EXAMINATION FOR SCHOOL ENTRY

To protect the health of children, California law requires a health examination on school entry. Please have this report filled out by a health examiner and return it to the school. The school will keep and maintain it as confidential information.

## PART I  TO BE FILLED OUT BY A PARENT OR GUARDIAN

<table>
<thead>

## PART III  ADDITIONAL INFORMATION FROM HEALTH EXAMINER (optional)

### RESULTS AND RECOMMENDATIONS

Fill out if patient or guardian has signed the release of health information.

- [ ] Examination shows no condition of concern to school program activities.
- [ ] Conditions found in the examination or after further evaluation that are of importance to schooling or physical activity are: *(please explain)*

### RELEASE OF HEALTH INFORMATION BY PARENT OR GUARDIAN

I give permission for the health examiner to share the additional information about the health check-up with the school as explained in Part III.

- [ ] Please check this box if you do not want the health examiner to fill out Part III.

---

If your child is unable to get the school health check-up, call the Child Health and Disability Prevention (CHDP) Program in your local health department. If you do not want your child to have a health check-up, you may sign the waiver form (PM 171 B) found at your child's school.

CHDP website: [www.dhcs.ca.gov/services/chdp](http://www.dhcs.ca.gov/services/chdp)
