# 2030 Strategic Plan

Since 2020, members of our community have joined efforts for the creation and implementation of the Peterson Strategic Plan 2030, with the objective of enhancing the school's position as a leader in innovation of the educational sector. The plan is based on the following 4 pillars:

## Goal 1. Life Skills

The priorities, rather than focusing on acquiring knowledge, are focused on developing skills such as emotional intelligence, flexibility, resilience and conflict resolution, which aim to turn students into individuals who know how to face day-to-day challenges.

## Goal 2- Upper School Modular Curriculum

The motivation to choose your own learning path is vital to transcend your own limits. That is why the IGCSE program was implemented in High School, with the objective of empowering students to choose which area to specialize in.

## Goal 3- Virtual Learning

The pandemic has accelerated the learning of digital skills, which we will maintain; by creating two parallel programs. "Virtual Days" will aim to support students' technological, autonomy, and organizational skills.

## Goal 4- Data, Tech, and Learning Trends

Learning needs and trends are constantly evolving. The creation of a Data X team will allow Peterson to reinforce their competitive advantage in the local and international educational markets by constantly investigating new trends to improve the student experience.
