Welcome to Early Intervention!
Here's What to Expect from Home Visits!

The intervention happens between visits!

You are the expert on your child! During home visits, we will work together to identify opportunities and strategies that can support your child's development. Learning takes place continually whenever you are interacting with your child.

Primary Service Provider

One person from our team will be your Service Provider and Coach. Other team members support interventions through joint visits, consultation, and problem solving. Our team consists of Early Intervention Teachers, Speech-Language Pathologists, an Occupational Therapist, a Physical Therapist, and others as needed.

Coaching

Research shows that children learn best with familiar adults and materials in their natural setting. We will provide support to you to improve your child's skills and abilities. Unlike a traditional therapy session, our support happens through a collaborative process of modeling, coaching, and practicing interventions within your everyday life.

At a Home Visit we will:

- **UPDATE:** How are things going? Any new information?
- **OBSERVE & COACH:** What does it look like now? What is going well? What could make it better?
- **PROBLEM SOLVE:** How did it feel?
- **PLAN:** What will you do? When will you do it? How will you do it?
- **REFLECT:** On the visit & next steps

Illness

Home visits are most effective when everyone is healthy. It is also important that we are not exposed to illnesses that we can carry from home to home. If anyone in your home is not feeling well or has any of these symptoms within the last 24 hours.

-runny nose with green mucus
-fever
-vomiting
-diarrhea
-any other contagious illness (ex: flu)

Please call your Primary Service Provider before the scheduled visit!
