

Schooltool App for iPhone and Android

Note: The screenshots are from an iPhone, but should look like similar on an Android device.

Step One: Download the App

Open up either Google Play Store or the iPhone App store. You will want to search for **Schooltool mobile**. You will want to make sure that you choose the Schooltool Mobile app from Mindex Technologies Inc.

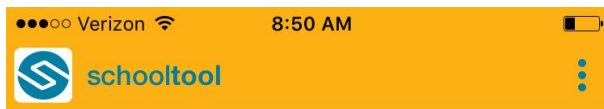

This should add an icon to your desktop that looks like this.

When you launch the Schooltool App you will need to enter the following URL (web address) in the App. <https://st.edutech.org/nrose>

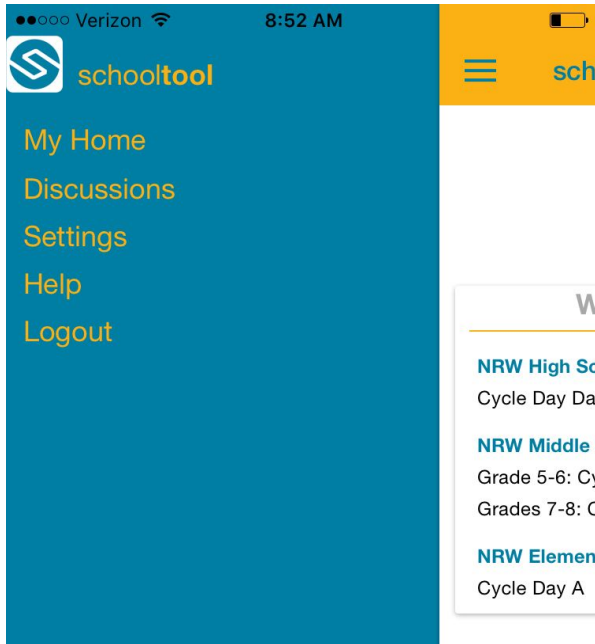

You will then need to enter your username and password and choose whether or not you want to stay logged into the App.

<input type="text" value="https://st.edutech.org/nrose"/>
<input type="text" value="Username"/>
<input type="password" value="Password"/>
<input type="checkbox" value="Stay Logged In"/> Stay Logged In
<input type="button" value="Log in"/>

Once you have done this you should be able to click on the **Log in** button. From there you will be brought to your home screen which will look similar to the website and allow you to access your students and their student information.

Depending on what kind of alerts you'd like from Schooltool, and your data plan, you may want to adjust the push notifications from the Schooltool app. To do this you will need to click the three bars in the top left-hand corner of the app. From there you will want to click the **Settings** button.

This will allow you to turn the Notifications on and off based on your needs.
