

# INTEGRATED PEST MANAGEMENT NOTIFICATION 2023-24

Janet B. Johnson Parents' Right-To-Know Act of 2000

All Minnesota schools are required to inform parents/guardians and school employees that they may request to be notified prior to pesticide application on school property. Pesticides include chemicals which are used to control insects, weeds, rodents or other pests as defined by the law (M.S. 123B.575, Subd. 9).

To provide the required information, schools must maintain a list of parents/guardians and school employees who request notification. Schools must also provide information about individual pesticide applications upon request, including the name of the pesticide product, and the time and location of the planned application. An estimated schedule of pesticide applications is available for review or copying at the Buildings & Grounds office.

Pesticides and non-chemical treatments may be used in combination in and around schools for a variety of reasons, including the control of pests which have the potential to bite, sting, spread disease, cause asthma, and/or trigger an allergic reaction. Pesticides may also be used to prevent or control damage to materials within the school building or to the school building itself, or to control pests or weeds that are seen as a nuisance.

The long-term health effects on children from the application of such pesticides or the class of chemicals to which they belong may not be fully understood. Children may be more susceptible to pesticides than adults due to their smaller size and rapid growth and development. Also, their playful behavior may expose them to more pesticide residue.

To limit the potential pesticide exposure, this school follows safety regulations to ensure pesticides are applied properly. All pesticide products, which are used in and around school buildings, are required to be registered with the Minnesota Department of Agriculture and the U.S. Environmental Protection Agency. In addition, school employees and certified and licensed applicators are required by state and federal law to comply with all requirements of the pesticide label, including building sites, application rates, re-entry intervals, posting, use of personal protective equipment, use restrictions, and disposal on the product label.

If you would like to be notified prior to pesticide applications made on days other than those specified in the estimated schedule (excluding emergency applications), please contact Craig English, Health & Safety Manager, at 507-333-6034.
