

**ENERGY AND WATER MANAGEMENT**

The Baldy View Regional Occupational Program (ROP) shall establish goals to help reduce the ROP's demand for electricity and water in order to help conserve natural resources and to save money to support other ROP needs.

This effort shall include:

1. Developing an emergency action plan to address actions to be taken in the event of power outages in ROP premises, both during and after ROP operation, and to update the plan annually.
2. Analyzing the effect of a utility rate increase on the ROP's budget and develop and implement any necessary contingency plans.
3. Conducting regular inspection of facilities and operations in order to make recommendations for maintenance and capital expenditures that may help the ROP reach its energy and water conservation goals.
4. Identifying funding opportunities and cost-reducing incentive programs to help the ROP achieve its conservation goals.
5. Reporting periodically to the Baldy View Regional Occupational Program Commission on the ROP's progress in meeting energy and water use reduction goals.
