ADDENDUM NO. FOUR (4)

PROJECT: PV-TEC Building Remodel

To: **All Bidders**

This addendum forms a part of the contract documents and modifies the original bidding documents as noted below. Except as affected by data included herein, all other parts of the contract documents shall remain in full force and effect. It shall be the sole responsibility of the bidder to appropriately disseminate this data to all concerned prior to the bid time and date. Acknowledge receipt of this addendum in the space provided on the bid form. Failure to do so may subject the bidder to disqualification.

This addendum consists of 2 page(s) and 19 page(s) attachment for a total of 21 pages.

GENERAL ITEMS:

- A1 Please see the attached foundation plans and structural calculations for the project.

- A2 As a matter clarification and in accordance with the PEMB plans, submitted via Addendum 3, the exterior walls of the addition along the south, east, and north elevations are to be construction of 8” metal framing. There are no horizontal girts within these walls.

SPECIFICATION ITEMS:

- S1 Section 08 8000 Part 2.05 – It has come to our attention that the 1” sealed insulated glass used on the original building was altered from the original specification, to the following configuration:
 - 1. Outer Pane: 1/4" Clear Tempered.
 - 2. Interior Pane: 1/4" clear Solarban 70 with Low E on the #3 surface.Please use this 1” insulated glass unit in lieu of what is designated in the specification.

DRAWING ITEMS:

- D1 A7.3, A7.4, A8.3 - 5/8" Gypsum Board in Wall types C and D has been removed. They were previously designed as a fire rated wall but are not longer a requirement. See attached detail corrections.
- D2 A7.3, A7.4, A8.3 - The interior side of wall types C, D, E, F, and G shall be 5/8" T&G plywood
- D3 A7.1, A7.2, A7.4, A8.3 - The exterior wall sheathing on wall types E and F shall be 5/8" plywood sheathing. See attached detail corrections.
- D4 A8.3 – As a matter of clarification, detail 1/A8.3 has been modified to reflect the framing requirements for wall framing at the elevated floor system. Please refer to the note on the detail for requirements.
- D6 A9.1, A9.2 –Door Types 2, 3 and Storefronts C, D, and Q: Please use a standard 96" door in lieu of the 95" (7'-11") door as shown.
- D7 Electrical - "Provide fixture types F2 and F13 with integral occupancy sensors"

FOUNDATION NOTES

1. Design Information and Loads

- A. Foundation design in accordance with 2018 International Building Code using the reactions provided by the metal building manufacturer for the following design criteria.
- B. Ground Snow Load 45 psf
- C. Roof Live Load 20 psf
- D. Roof Collateral Load 8 psf
- E. Wind Speed 115 mph
- F. Sps C
- G. SDC D
- H. Frost Depth 2'-0"

2. Earthwork

- A. Foundation Design Values (assumed)
- i. Allowable Soil Bearing Pressure - 1500 psf
- ii. Coefficient of Friction - 0.25
- iii. Passive Earth Pressure - 200 psf/ft of depth
- B. The building pad area shall be stripped of all frozen soil, debris, vegetation, and topsoil. All fill soils and any remaining loose natural soils shall be excavated to expose suitable natural soils.
- C. Proof roll the entire building pad area to locate and remove all soft spots. Replace with compacted structural fill.
- D. Place all footings and slabs on undisturbed natural soil or on properly compacted structural fill. Contractor shall verify that soil under footings is suitable to support footings.
- E. Structural Fill: Structural fill should consist of well-graded sandy gravels with a maximum particle size of 3 inches and 5 to 15

percent fines (materials passing the No. 200 sieve). The liquid limit of fines should not exceed 35 and the plasticity index should be below 15. All fill soils should be free from topsoils, highly organic material, frozen soil, and other deleterious materials. Structural fill should be placed in maximum 6-inch thick loose lifts at a moisture content within 2 percent of optimum and compacted to at least 95 percent of modified proctor density (ASTM D1557) under the building and 90 percent under concrete flatwork.

F. It is the responsibility of the contractor to ensure that the depth of the bottom of the foundation is far enough below the adjacent grade to ensure adequate frost protection.

3. Concrete and Reinforcement

A. Material Standards

- i. Concrete
- a. Footings: Exposure Classes F0, S0, W0, C0
 $f'_c = 3000$ p.s.i., max. w/cm ratio = 0.55
- b. Exterior Walls: Exposure Classes F1, S0, W0, C1
 $f'_c = 3500$ p.s.i., max. w/cm ratio = 0.55
- c. Interior Walls: Exposure Classes F0, S0, W0, C0
 $f'_c = 3000$ p.s.i., max. w/cm ratio = N.A.
- d. Interior Slabs: Exposure Classes F0, S0, W0, C0
 $f'_c = 3500$ p.s.i., max. w/cm ratio = 0.55
- e. Air content for Exposures F1-F3 must meet the requirements of Table 19.3.3.1 of ACI 318-14. Air-entraining admixtures shall conform to ASTM C260
- f. Use Type II cement for Exposure Class S0. For Exposure Classes S1, S2 and S3 use Type II or Type V as required in Table 19.3.2.1 of ACI 318-14. Cement shall conform to ASTM

- C150
- g. Calcium Chloride admixture shall not be used in Exposures S2 and S3
- h. Normal weight aggregates - ASTM C33
- ii. Reinforcing
- a. Rebar - ASTM A615 Grade 60 ($F_y = 60$ ksi)
- b. Welded wire - ASTM A1064
- c. Epoxy/Adhesive - Simpson SET-XP (ICC-ES ESR-2508), Hilti RE-500V3 (ICC-ES ELC-3814), or Dewart Pure110+ (ICC-ES ESR-3298) unless noted otherwise in the drawings.
- iii. Anchor Rods/Bolts
- a. All anchor rods shall be cast-in-place headed anchor rods. Use of post-installed (epoxy, adhesive, expansion, screw, etc.) anchors is not allowed without written permission from MVE or unless specifically noted in the drawings.
- b. Steel column anchor rods/bolts - ASTM F1554 Grade 36 with ASTM A563 heavy hex nuts and hardened washers (unless noted otherwise)
- c. Wood framing anchors - ASTM A307 with A36 plate washers
- d. Headed stud anchors (HSA) - ASTM A108
- e. Deformed bar anchors (DBA) - ASTM A496
- f. Screw Anchors for jamps as indicated in the typical anchor rod schedule - Simpson Iiten HD (ICC-ES ESR-2713), Hilti Kwik HUS-1Z (ICC-ES ESR-3027), or Dewart Screwbolt+ (ICC-ES ESR-2528)
- g. Use of hooked anchor rods/bolts is limited under the ACI and the IBC. Headed anchor rods/bolts must be used where indicated in the details.

- h. The symbols $\text{C.A.R.}/\text{E.A.B.}$ as shown in the drawings indicate the center line of the anchor rod/bolt pattern, not the center line of any individual anchor rod/bolt.
- B. Detail reinforcing to comply with ACI 315 "Manual of Standard Practice for Detailing Reinforcing Concrete Structures" and the Concrete Reinforcing Steel Institute (CRSI) recommendations.
- i. Minimum clear concrete cover for reinforcement shall be as follows unless noted otherwise:
- a. Concrete cast directly against and permanently exposed to earth - 3"
- b. Concrete exposed to weather or earth:
- #5 bars or smaller - 1 1/2"
 - #6 bars or larger - 2"
- c. Concrete not exposed to weather or in contact with the ground - 3/4"
- d. Slabs on grade - as shown in details, 3/4" min. from top of slabs not exposed to weather
- ii. Lap Splice Lengths with 1 1/2" minimum clear cover
- a. $f'_c = 2500-3500$ p.s.i.
- #6 and smaller - 49 bar diameters
 - #7 and larger - 76 bar diameters
- b. $f'_c = 4000$ p.s.i. or greater
- #6 and smaller - 38 bar diameters
 - #7 and larger - 60 bar diameters
- c. increase lap splice lengths by 50% where epoxy coated bars are used.
- iii. Stagger splices in walls so that no two adjacent bars are spliced in the same location, unless shown otherwise.

- iv. Make all bars continuous around corners or provide corner bars of equal size and spacing.
- v. Where 12 inches or less of fresh concrete is placed below horizontal reinforcing lap splice length may be reduced by 30%.
- vi. Vertical bars in walls, grade beams, and piers to terminate in footings with ACI standard hooks (12 bar diameters) to within 4" of the bottom of the footing unless noted otherwise.
- vii. Horizontal wall reinforcing shall terminate at the ends of walls with a 90 degree hook plus a 6 bar diameter extension, unless shown otherwise.
- viii. Horizontal wall reinforcing shall be continuous through construction and control joints.
- ix. Splices in horizontal reinforcing shall be staggered. Splices in two curtains (where used) shall not occur in the same location.
- x. Use chairs or other support devices as required for proper clearance.
- xi. Rebar hairpins shall be centered in slabs and shall be wire tied to the slab reinforcing (if any). Rebar hairpins shall be continuous through walls and piers; lap splices in hairpins may only occur in the floor slab unless noted otherwise.
- C. Control joints in slabs on grade are recommended to control cracking. See plans for control joint spacing and details.
- D. Slabs and grade beams shall not have joints in a horizontal plane. All reinforcement shall be continuous through all construction joints.
- E. Floor slab thickness and reinforcing shown in these drawings are adequate to support typical uniform loads only. Mountain View Engineering has not designed the slab for any specific concentrated forces such as those from vehicles, storage racks, or heavy equipment (unless noted otherwise).

- F. Welding of rebar is not allowed unless specifically indicated in the drawings. All embedments, reinforcing, and dowels shall be securely tied to framework or to adjacent reinforcing prior to placement of the concrete. Tack welding of rebar joints in grade beams, walls, or cages is not allowed. Where welding of rebar is shown in the drawings, all rebar to be welded shall be ASTM A706 Grade 60.

4. Special Inspections

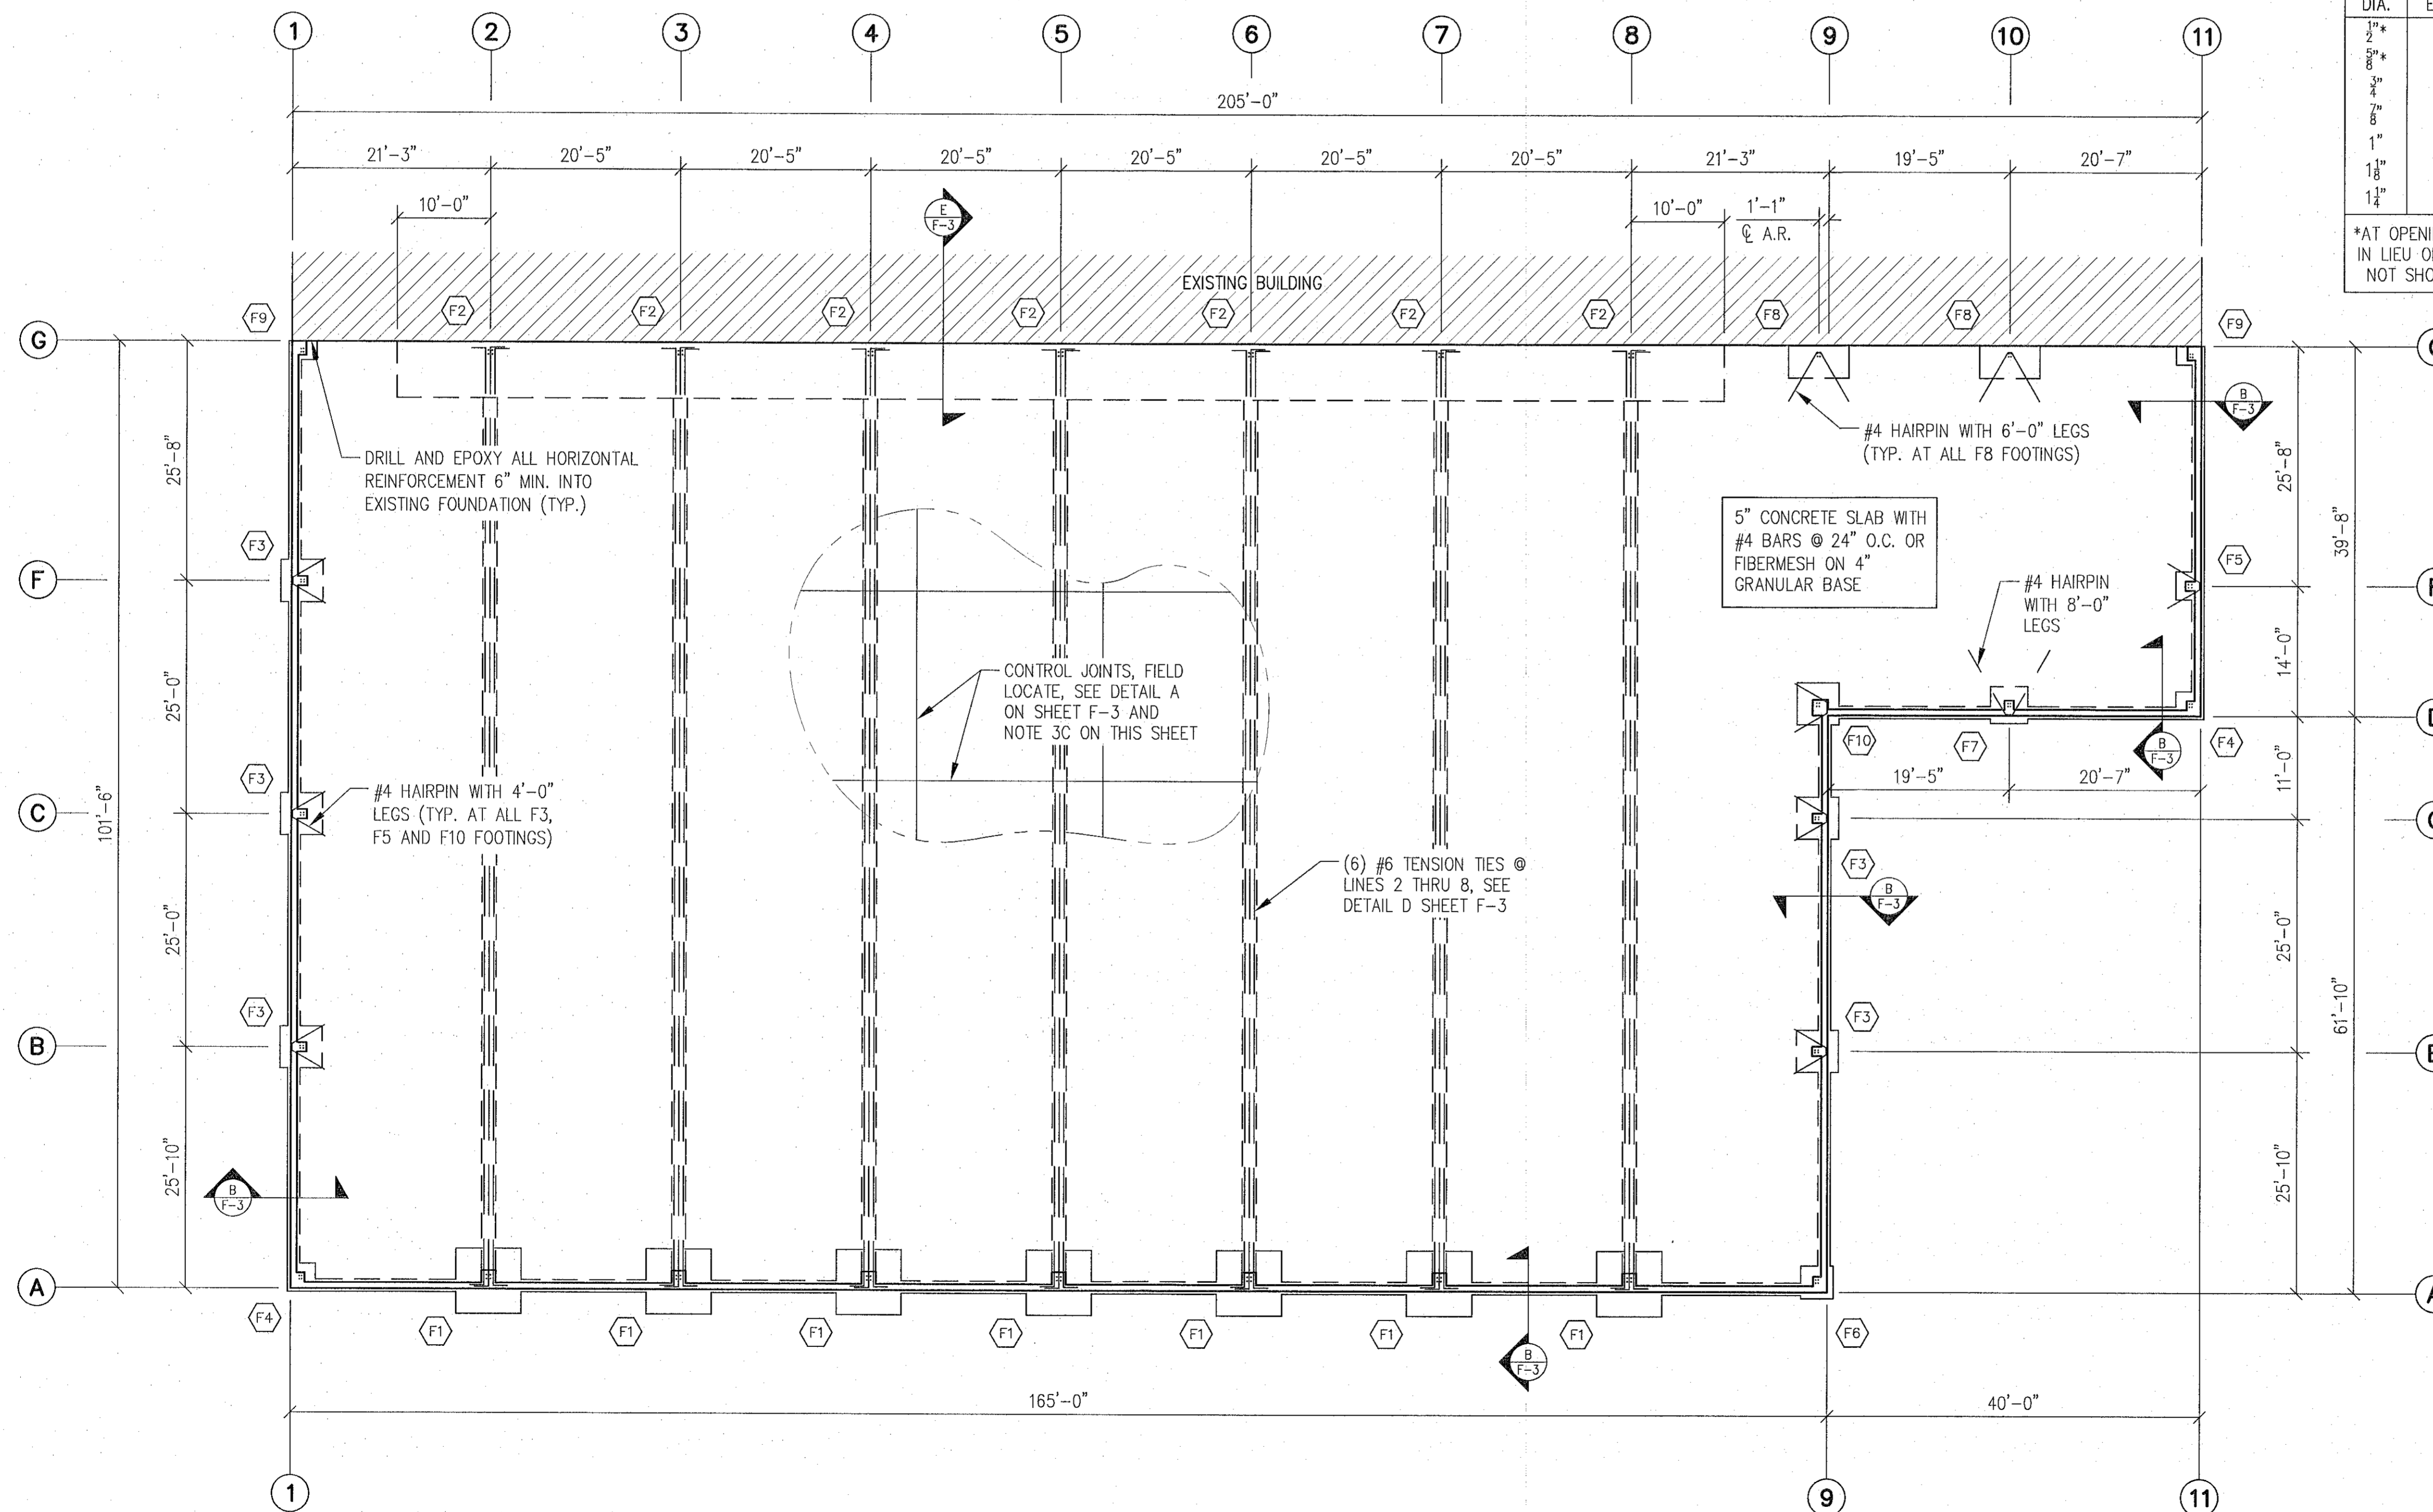

- A. Concrete
- Spot Footings - Not required (IBC 1705.3 Exception 1)
 - Continuous Ftgs. - Not required (IBC 1705.3 Exception 2.3)
 - Slabs - Not required (IBC 1705.3 Exception 3)
 - Grade Beams - Not required (IBC 1705.3 Exception 4)
 - Walls - Not required (IBC 1705.3 Exception 4)
 - Anchor rods/bolts - Required (IBC Table 1705.3) Special inspection may be waived subject to the approval of the building official.
- B. Steel Reinforcement
- Placement - Third party special inspection of reinforcing placement need only be performed where specifically required by the building official.
 - Welding - Special inspection of rebar welding is required (if any is used).

5. Miscellaneous

- A. The contractor shall notify engineer of any variations in dimensions.
- B. The engineer is not responsible for any deviations from these plans unless such changes are authorized in writing by the engineer.

CONTROL JOINT NOTES:

- Control joints shall be field located by the contractor.
- Control joints shall be located to limit the frequency and width of random cracks in the concrete slab.
- Locate and install control joints in accordance with ACI 360R "Design of Slabs on Ground" and the details shown.
- Maximum spacing of joints shall be per the table below.
- Saw cuts should be made as soon as possible.
