A focus on Maker
Education...

Who is a Maker?

Are You a Maker?

Who is a Maker?

“America was built by makers —
curious, enthusiastic amateur
inventors whose tinkering habit
sparked whole new industries”

Dale Dougherty

Founder and CEO Make: Magazine & Maker Faire

From Dale's Book

A maker is someone who creates and shares projects.

- A maker...
 - Is **creative**
 - Is **not afraid of failure**
 - Is **playful**
 - Makes all kinds of things for personal, social and commercial purposes
 - Values **making** and **creating** over using and consuming
 - Can be **any age** and from **any culture**
 - Loves to **share** their projects

Making is in our human DNA – We were born to make.

Who is a Maker?

- Maker Faire –
Where Makers
Share!
- Maker Faire's
Slogan...

What we'll cover from here...

- My Maker Story
- Taking Making to the Classroom
- Practical Tips on Starting a Maker Program for ALL kids

My Journey as a Maker

Air Rocket Works... from Personal to Commercial

PAPER & TAPE ROCKET TEMPLATE

AirRocketWorks.com

1 CUT & FOLD

Use the cut and fold lines to prepare the components of your rocket:

CUT _____
FOLD - - - - -

This rectangular portion of paper will become the body tube of your rocket. You will use this entire 8.5 x 11 sheet of paper (no scraps) to make the rocket.

2 WRAP BODY TUBE

Read step 3 before proceeding. Wrap the body tube paper (this sheet) around the 1/2-inch PVC pipe, aligning with one end of the pipe. Add a piece of tape to the top, middle, and bottom. *Important: Do not tape the paper to the PVC pipe.*

3 TAPE BODY TUBE

Wrap the entire body tube with tape, overlapping the tape as you move down the length of the tube.

BODY TUBE

4 PRESSURE CAP

Out out the pressure cap. It will hold the air pressure, so secure it with several pieces of tape.

5 NOSE CONE

Out out the nose cone, and roll it into a funnel shape, overlapping to hide the stripe pattern. Tape along the seam. Set aside.

6 CUT & FOLD FINS

Out out the three fins and fold each into a 'W' shape.

7 ATTACH FINS

Tape the smaller tabs on the fins to the body tube. *Firm the shape of the fins, if desired.*

8 FINAL ASSEMBLY

Read step 9 before proceeding. Take all paper scraps (including instructions), and crumple into a cone-shaped lump. Pack this lump into the nose cone and tape it over the pressure cap onto the body tube of the rocket. Cover the nose cone with tape.

9 DECORATE

Decorate your rocket. Slide the rocket off of the PVC pipe. Your rocket is ready to launch!

High-Pressure Foam Rocket

Toy or not, this rocket really packs a punch.

By Rick Schertle Time Required: 1-3 Hours Difficulty: Easy

Print this Project

December 18, 2012, 11:00 pm PDT

Calling a rocket that sprints over 100 feet into the air a "toy" might be a bit of a stretch. Toy or not, this rocket really packs a punch. Fly it using the [Compressed Air Rocket launcher](#) from MAKE Volume 15 (get the kit at makezine.com/go/launcherkit) or a stomp rocket launcher (makezine.com/go/stomplauncher).

PARTS / TOOLS

Packing tape, clear (optional)

Duct tape Fun colors are now available.

Zip tie, 8"

Foam sheet, 2mm thick, 9"x12" available at craft stores or online

Foam pipe insulation, 1" inside diameter.
You can build 8 rockets with a 6' piece
(instructions here are for one rocket).

Maker Faire

A place where makers share,
collaborate and get inspired!

What happens on Monday when kids head back to school after being inspired at Maker Faire?

Maker Spaces in Schools!

Laura and Steve in
Taichung

When my Maker World and Teacher World Collided!

- 23 years teaching middle school – US History, World History, Language Arts, Computers and Media Production
- 2016 started at Steindorf K-8 STEAM School in same district as Maker Lab Teacher!
- Serving 500 – K-8 kids every day!

What I'm doing now...

- 500 kids a week!
- One teacher – me 😊
- Very small budget (public school)

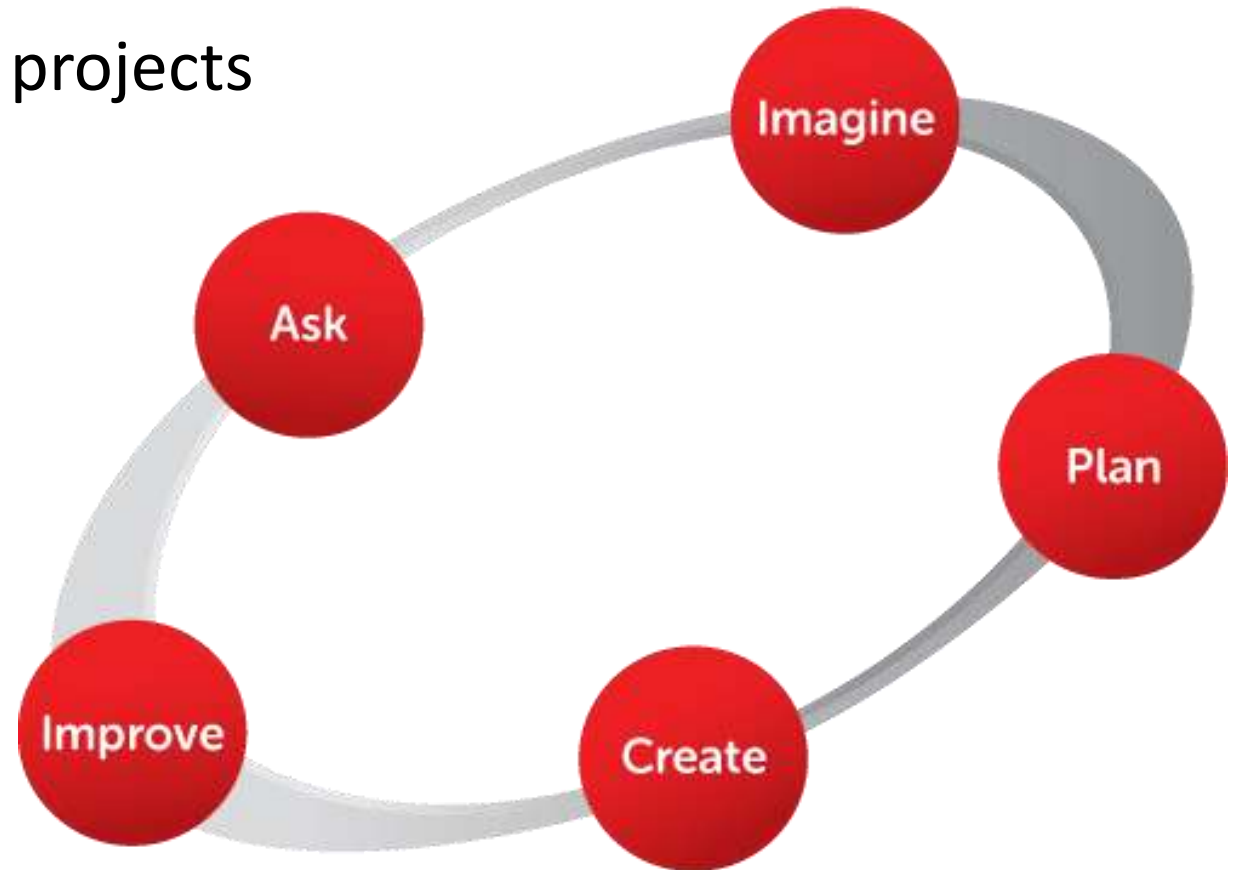

Let's take a look at...

- Program
- The Space
- Tools
- Resources

Kid's Maker Mindset

- All kids can learn to be makers
- Programs should be active, hands-on and collaborative
- Kids build skills that are applied to projects
- Problem solving.

Program

Determines your Space Needs and Tools

Models of Programming in Schools

- Programming of a Maker Space
 - Mobile Maker Carts
 - Rotating Stations within a Workshop
 - Scheduled Classes
- Currently at Steindorf I Teach...
 - Middle School (twice a week as part of their regular schedule)
 - Two 6th grade
 - Two 7th grade
 - Three 8th grade
 - K-5
 - K-2 (every other week for an hour)
 - 3-5 (every week for an hour)

Maker Lab – Current Middle School Program

- Balancing teaching skills, working on projects to practice skills, kid-chosen projects and supporting PBL's
- Core Projects – To Start (for all middle schoolers)
 - 6A – Structural Engineering
 - Marble Paper Roller Coasters and Bridge Building
 - 6B – Electrical Engineering
 - Tinker Kits (analog circuits) and Arduino/Breadboarding
 - 7-1 – Robotics and Sensors
 - mBots – mCore – sensors – Arduino programming
 - 7-2 – Makey Makey and Scratch Programming
 - 7-3 – Aero Engineering
 - Dragonfly Helicopters – Air Rockets – Gliders/Airplanes
 - 8 – VEX Robotics

Maker Lab – Program (woven in)

- Woodworking
 - Hand tools – Measuring, Clamping and Cutting
 - Power tools - drill press, sander, scroll saw, power drill
- Design and Fabrication – Software and Hardware
 - Tinker CAD (for .STL files) – 3D Printer
 - Inkscape (for vector files) – Laser Cutter
 - Easel - CNC Router – Heavy Duty Wood Cutting
 - Cameo Silhouette – Paper Cutting

MAKER LAB

- WELCOME

Edit

Welcome to the Steindorf Maker Lab!

The Maker Lab is a creative space staffed by Cambrian teacher [Rick Schertle - schertler@cambriansd.com](mailto:schertler@cambriansd.com). The over 3000 square foot double wide lab classroom is an

area for K-8 students to create, learn, build, share and play.

Core units include but are not limited to electronics, robotics, mechanics, construction, flight, programming, woodworking and fabrication. See Rick's [Back to School Night Presentation](#) here. This year, Rick teaches three 6th grade and one 7th grade classes three days a week as well as facilitates K-5 STEAM integration.

Make:

Planes, Gliders, and Paper Rockets

**Simple Flying Things
Anyone Can Make—Kites
and Copters, Too!**

**Rick Schertle &
James Floyd Kelly**

Booklet Version 1.0

Tinker Kits Include:

- Electric Motor
- Craft sticks (5)
- Alligator Cables (4)
- Toothpicks (3)
- Battery Holder with On/Off Switch
- Paper Clips (5)
- AA Batteries (2)
- Hot Glue Stick
- Releasable Cable Ties (4)
- Cardboard Square
- LED's (3 colors)
- 56 Ohm Resistor
- Handy Storage Box
- Cork
- 28 Page Full-Color Tinker Kit Manual

Just add your own masking tape and some creativity and you're ready for hours of tinkering fun!

If you had \$1000 to get started...

- Glue Guns! (less than \$5 each)
- Tinker Kits (30 for \$150)
- Makey Makey Boards (\$50 each, have kids work in teams - Needs to be connected to a laptop for programming with SCRATCH)
- SCRATCH (Free at: <https://scratch.mit.edu/>) Graphical programming interface to use with Arduino and Makey Makey boards.
- BBC micro:bit
- Hand tools
- DIY Cart and Storage Bins

More of my Favorite Stuff!

As your budget grows...

- Laser Cutters – Full Spectrum or Glowforge
- Scroll Saw – harborfreight.com
- Paper Marble Rollercoaster - paperrollercoasters.com
- Strawbees – www.strawbees.com
- Sparkfun Inventor Kits – www.sparkfun.com
- Air Rockets – www.airrocketnetworks.com
- mBots – makeblock.com
- Makey Makey – makeymakey.com
- Scratch – scratch.mit.edu
- DIY R/C Airplanes - brooklynaerodrome.com

Rick's Maker Space Highlights

schertler@cambriansd.com

Books for Ideas:

- The Big Book of Maker Space Projects
- Tinkering
- 20 Makey Makey Projects for the Evil Genius
- Make: Planes, Gliders and Paper Rockets
- mBot for Makers

Websites for Ideas and Planning:

- Maker Ed: makered.org
- Make: makezine.com
- Steindorf Maker Lab: www.cambriansd.org/makerlab
- Instructables – www.instructables.com
- Digital Promise - digitalpromise.org/maker-leadership/

Events for Inspiration

- Maker Faire! – www.makerfaire.com

If you had a \$1000 budget to get started...

- Glue Guns! (less than \$5 each)
- Tinker Kits (30 for \$150)
- Makey Makey Boards (\$50 each, have kids work in teams - Needs to be connected to a laptop for programming with SCRATCH)
- SCRATCH (Free at: <https://scratch.mit.edu/>) Graphical programming interface to use with Arduino and Makey Makey boards.
- Hand tools – www.harborfreight.com
- DIY Cart and Storage Bins

Parents can donate many of the materials below to build projects from the books listed above using the tools listed above.

- Cardboard Tubes
- Cereal Boxes
- Craft Sticks
- Aluminum Foil
- Masking Tape
- Rubber Bands

As your Budget Grows

- mBots, sensors and mBot Book – www.makeblock.com & amazon.com
- Sparkfun Inventor Kits – www.sparkfun.com/products/14189
- Particle Chips (For IoT Projects) - store.particle.io/
- VEX Robotics - www.vexrobotics.com
- Laser Cutter - fslaser.com
- Marble Paper Roller Coasters – paperrollercoasters.com/
- Strawbees - strawbees.com
- Engineering is Elementary – eie.org
- Air Rockets and Gliders – www.airrocketworks.com
- Dewalt Scroll Saw - www.dewalt.com

The resources listed above provide for Open Ended making experience on a budget, for whole classes of kids. Projects, tools and materials here encourage Design Thinking with many different outcomes. For updates to this document go to: www.cambriansd.org/makerlab

The Engineering Design Process

To solve engineering problems, engineers follow a series of steps called the "Engineering Design Process"

ASK: What is the problem? How have others approached it? What are your constraints?

IMAGINE: What are some solutions? Brainstorm ideas. Choose the best one.

PLAN: Draw a diagram. Make lists of materials you will need.

CREATE: Follow your plan and create something. Test it out!

IMPROVE: What works? What doesn't? What could work better? Modify your designs to make it better. Test it out!

More details at: www.eie.org/eie-curriculum/engineering-design-process
