

Harvest of the Month | Fact

Apples

Throughout the world, about 7,500 different varieties of apples are grown, with about 2,500 varieties grown in the United States. Apples range in color in shades of red, green, and yellow and vary in flavor from tart (e.g. Stayman, Granny Smith) to sweet (e.g. Fuji, Gala). While most varieties of apples are great eaten raw, only some are considered good for cooking (e.g. McIntosh, Granny Smith, Rome, and Cortland.)

Did you know?

-  Pennsylvania produces 400 to 500 million pounds of apples per year and ranks fourth in the nation for apple production.
-  The majority of apple production in Pennsylvania is centered in the southcentral part of Pennsylvania but apples are grown throughout the Commonwealth.
-  About one third of Pennsylvania's apple crop is sold fresh. The remainder is sold for processing to make products such as apple cider, applesauce, apple pies and apple juice.

Selection

Good quality apples are firm, with smooth, clean skin that is free of blemishes. Consider how you will use the apples when deciding how to select. For example, the highest quality may not be necessary if the apples are going to be peeled and used to make products such as pie or apple sauce. Some schools have even found that purchasing apples that are considered “seconds” saved money and were acceptable to students even when served raw.

Avoid apples with soft or dark spots and ones that have rough and scab-like conditions on the stem end.

Storage

Apples are best stored at 32 °F with a relative humidity of 90% and some air circulation. Under these conditions, apples are acceptable for up to 3 months. Apples may be held in dry storage for up to 7 days. Apples will pick up odors if stored with certain foods that produce them, such as onions and potatoes. Apples produce a gas called ethylene which causes other produce to ripen quickly. Store apples away from ethylene sensitive products such as bananas, broccoli, carrots, cucumbers, leafy greens, lettuce, and sweet potatoes.

Handling

Wash apples under cold, running water prior to serving. If cut on-site, seal, date, and refrigerate apples immediately and use by the following day. To prevent cut apples from browning, dip or coat sliced apples with an acidic solution of 1 part lemon juice to 3 parts water or use an appropriate commercial product according to the manufacturer's instructions. Waxing is a normal part of apple processing and is not a food safety concern.

Nutrition

Apples are a source of fiber and vitamin C. Removing the skin removes much of the fiber. Dehydrating or drying the apples removes the vitamin C. Apples are also a source of phytochemicals which are substances that are believed to guard against cell damage and have a wide variety of health benefits. Studies show that apples, or the specific phytochemicals in them, may protect against cardiovascular disease, diabetes, and some forms of cancer and may help with weight control.

Harvest Season

According to the PA Preferred Seasonal Calendar, apples are available year-round in Pennsylvania. They are typically harvested from July through October. Many apples are held in controlled atmosphere storage after harvest for several months.

Preparation

Eating apples raw is probably the most popular way to consume them. Young children, in particular, may prefer sliced apples over whole ones.

Apples can also be added to salads or even main dishes like stir fries, made into applesauce, or baked.

Recipe | Apple Cranberry Coleslaw

50 servings (½ cup)

Credits: ¼ cup fruits and ¼ cup other.

PrimerEdge Recipe Code: SR109974

Cabbage	14 cups shredded	1. Shred the cabbage.
Red Delicious Apples	10 cups chopped	2. Chop the apples (skin on) into thin strips.
Dried Cranberries	2 cups	3. In a large bowl, combine cabbage, apples, and cranberries.
Honey	1 cup	4. In a medium bowl, whisk together honey, vinegar, olive oil, and lemon juice until emulsified into a dressing.
Apple Cider Vinegar	1 cup	
Olive Oil	1 cup	
Lemon Juice	½ cup	
		5. Add dressing to the cabbage mixture and stir to evenly coat with dressing.
		6. Pour into a 20"x12"x6" pan to serve. CCP: Hold at 41° F degrees until service
