

# COVID-19 SCREENING TOOL

Parents, please review these symptoms for yourself and your child(ren) each morning prior to coming to a school campus to drop off your student. We appreciate your support and recognition that it is very important that you do not send a child to school who is sick.

Active and / or passive screening methods will be applied in accordance with public health guidelines and existing Memoranda of Understanding (MOUs) for FCUSD.

## DEFINITIONS

- **Passive screening:** Staff and students must screen for symptoms at home daily, prior to arriving on campus. Staff and student presence on campus is an indication that they have self-screened for symptoms per current symptom screening questions.
- **Active Screening:** Staff and students entering a site or school bus to be screened for illness including a temperature check and review of signs and symptoms of illness. Parents/guardians would remain with their student until the student is admitted to the site. Any student or staff with a temperature of 100.4°F or higher, or signs or symptoms of illness listed on the symptoms screening questions, shall return home. Staff and families shall prepare for morning delays for an active screening process.

Passive screening is currently in use and will be applied to cohorts and the hybrid model. Active screening may be applied to 1:1 Assessments.

*Please note: Active symptom screenings will identify only that a person may have an illness, not that the illness is COVID-19. Many of the symptoms of COVID-19 are also common in other illnesses like the common cold, the flu, or seasonal allergies. The CDC currently recommends that schools do not conduct active symptom screenings (screening all students in grades K-12). Parents or caregivers should monitor their children for signs of infectious illness every day. Those who are sick or experiencing symptoms should not attend school in-person.*

# COVID-19 SCREENING TOOL

Before coming to campus each day, screen for symptoms of illness by answering the following questions:

## FOR ADULTS

### SYMPTOM

- Do you have a fever (100.4°F or greater) without having taken any fever-reducing medications? Do you have a loss of smell or taste?
- Do you have a cough?
- Do you have muscle aches?
- Do you have congestion or a runny nose?
- Do you have shortness of breath?
- Do you have chills?
- Do you have a headache?
- Have you experienced any new gastrointestinal symptoms, such as nausea, vomiting, diarrhea, or loss of appetite in the last few days?
- Have you, or anyone you have been in close contact with, been diagnosed with COVID-19 or placed in quarantine for possible exposure to COVID-19 within the last two weeks?
- Have you been asked to isolate or quarantine by a medical professional or a local public health official in the last two weeks?

## FOR CHILDREN

### SYMPTOM

- Does the child have a fever (100.4°F or greater) without having taken any fever-reducing medications?
- Does the child have a sore throat?
- Does the child have a new uncontrolled cough that causes difficulty breathing (for children with chronic allergic/asthmatic cough, a change in their cough from baseline)?
- Does the child have diarrhea or vomiting?
- Does the child have a new onset of severe headache, especially with a fever?
